Urban-Rural Interfaces David N. Laband,B. Graeme Lockaby,2020-01-22 What is the urban rural interface Is it a visual phenomenon a place where country gives way to neighborhoods and shopping areas in a startling way Is it a simple factor of population density There is nothing simple about the urban rural interface editors David Laband Graeme Lockaby and Wayne Zipperer present the broad spectrum of interdisciplinary complexities at play Organized into three sections on changing ecosystems changing human dimensions and the dynamic integration of human and natural systems this book is a must read for anyone who works in the real world where natural and human systems are joined This is the new sustainability science an emerging discipline that integrates social and economic values with the physical chemical and ecological functions of ecosystems The goal is optimal management since our human impact is often significant and far reaching in both space and time **Environmental Dilemmas** R.J. Berry,2007-08-19 This is a book by people who have had to make decisions which affect the environment in which we all live decisions which sometimes affect the quality of life of millions It is not an academic disquisition on how to approach decision making Most of the chapters are written by scientists who have had to take action or make recommendations on environmental matters in situations where the data are incomplete or choices hedged by factors beyond scientific resolution the result is that they have had to resolve dilemmas about the proper way forward in the matter My brief to the authors was to describe issues with which they had been personally concerned rather than simply select from the vast range of environmental problems out there The only exception to this was Andrew Brennan Chapter 1 who is a professional philosopher I asked him to say something about the processes and errors indulged by environmental decision makers There is some overlap between chapters but this is not extensive I have made no attempt to

eliminate it because the aim has been to present personal points of view not a systematic account of environmental problems Similarly there are important topics which are not covered Indeed a critic would complain that a book on environmental dilemmas which does not deal directly with the crucial divide between development and conservation is almost wholly irrelevant from one point of view it could be condemned as fiddling while Rome burns
