Computerized Symbolic Manipulation in Mechanics Edwin Kreuzer, 2014-05-04 The aim of this book is to present important software tools basic concepts methods and highly sophisticated applications of computerized symbolic manipulation to mechanics problems An overview about general purpose symbolic software is followed by general guidelines how to develop and implement high quality computer algebra code The theoretical background including modeling techniques for mechanical systems is provided which allows for the computer aided generation of the symbolic equation of motion for multibody systems It is shown how the governing equations for different types of problems in structural mechanics can be automatically derived and how to implement finite element techniques via computer algebra software Perturbation methods as a very powerful approach for nonlinear problems are discussed in detail and are demonstrated for a number of applications The applications covered in this book represent some of the most advanced topics in the rapidly growing field of research on symbolic computation **Methods and Tools for Applied Artificial Intelligence**

Popovic, 1994-05-02 This work provides a comprehensive and coherent introduction to the expanding field of Artificial Intelligence AI explaining how knowledge based systems are built what tools and technologies are relevant and available and how to employ them in specific situations It pays special attention to the commercial intelligence systems that emerged in the 80s as well as projecting the likely developments of the 90s **Development of Knowledge-Based Systems for**

Engineering Carlo Tasso, Edoardo R. de Arantes e Oliveira, 2014-05-04 The goal of the volume is twofold to help engineers to understand the design and development process and the specific techniques utilized for constructing expert systems in engineering and secondly to introduce computer specialists to significant applications of knowledge based techniques in engineering Among the authors are world famous experts of engineering and knowledge based systems development

Expert systems for technical fault diagnosis Roman R. Laczkovich, 1990-01-01 First published in 1990 and now available unchanged in English this book offers a rare in depth look at diagnostic expert systems DXPS at the moment they moved from laboratory prototypes into real world use Written for both scientists and practitioners it bridges computer science engineering and business management The author examines the challenges of creating and integrating DXPS beyond pure IT questions sourcing or building knowledge bases embedding systems into operational environments adapting maintenance strategies and addressing legal data protection and security concerns The work demystifies expert systems by clearly defining their actual capabilities and limits Three categories of diagnostic problems are identified and tailored DXPS

types are designed for each The result is a practical and conceptual framework that remains relevant today especially for those exploring hybrid AI approaches that combine modern machine learning with transparent rule based reasoning This edition preserves the original text while contextualizing it in a new foreword that links early expert system concepts to the AI architectures of the 21st century Artificial Intelligence with Common Lisp James L. Noyes,1992 The book provides a balanced survey of the fundamentals of artificial intelligence emphasizing the relationship between symbolic and numeric processing The text is structured around an innovative interactive combination of LISP programming and AI it uses the constructs of the programming language to help readers understand the array of artificial intelligence concepts presented After an overview of the field of artificial intelligence the text presents the fundamentals of LISP explaining the language s features in more detail than any other AI text Common Lisp is then used consistently in both programming exercises and plentiful examples of actual AI code Back cover This text is intended to provide an introduction to both AI and LISP for those having a background in computer science and mathematics Pref
