Rational Numbers

Students enter sixth grade with varying levels of understanding of fractions and equivalent fractions. In *Comparing Bits and Pieces*, students extend their understanding of fractions to the concepts of ratio and rate by exploring fractions as points on a number line, as measurements of distance, and in relative order. Students are introduced to rational numbers and ratio, a comparison of two quantities.

Careful sequencing of the problems in this unit helps students deepen their knowledge of fractions and feel more comfortable working with fractions. The problems in *Comparing Bits and Pieces* are the foundation for understanding ratio in later units and grades.

Rational numbers comprise a portion of the set of real numbers. Rational numbers are numbers that can be expressed as $\frac{a}{b}$, where a and b are both integers and b is not 0. From the point of view of sixth grade students this means that Rational numbers are positive and negative fractions, and any number that can be expressed as a positive or negative fraction. Thus, $4 = \frac{4}{1}$, and $0 = \frac{0}{1}$, and $-2\frac{3}{4} = -\frac{11}{4}$, are all rational numbers. This is all that sixth grade students need to know at this point.

Later they will encounter numbers that cannot be expressed as $\frac{a}{b}$, where a and b are integers and b is not 0. These numbers are the irrational numbers. The diagram shows that Irrational numbers and Rational numbers are mutually exclusive sets. Together the rationals and irrationals form the set of Real numbers.
