Progress in Location Based Services 2018 Peter Kiefer, Haosheng Huang, Nico Van de Weghe, Martin Raubal, 2017-12-07 This book gathers a selection of the best papers presented during the 14th International Conference on Location Based Services which was held in Zurich Switzerland between the 15th and 17th January 2018 It presents a general overview of recent research activities related to location based services Such activities have grown in importance over the past several years especially those concerning outdoor indoor positioning smart environments spatial modeling personalization and context awareness cartographic communication novel user interfaces crowdsourcing social media big data analysis usability and privacy Human Factors for Engineers Carl Sandom, Roger S. Harvey, 2004-08-13 The book discusses human factors integration methodology and reviews the issues that underpin consideration of key topics such as human error automation and human reliability assesment Vehicle Feedback and Driver Situation Awareness Guy H. Walker, Neville A. Stanton, Paul M. Salmon, 2018-04-17 A potentially troubling aspect of modern vehicle design some would argue is a trend for isolating the driver and reducing vehicle feedback usually in the name of comfort and refinement but increasingly because of automation

There is little doubt cars have become more civilised over the years yet despite this the consequences of driver behaviour remain to a large extent anecdotal. Readers will have heard such anecdotes for themselves. They usually take the form of drivers of a certain age recalling their first cars from the 1970s or 80s in which doing 70 mph really felt like it. The question is whether such anecdotes actually reflect a bigger more significant issue that could be better understood. Related questions have been explored in other domains such as aviation where the change to fly by wire did indeed bring about some occasionally serious performance issues that were not anticipated. Despite some clear parallels automotive systems have been left relatively unstudied. The research described in this book aims to explore precisely these issues from a Human Factors perspective. This means connecting the topics of vehicle feel, vehicle dynamics and automotive engineering with the latest research on driver situation awareness. The problem is explored experimentally from a variety of theoretical viewpoints but the outcomes are consistently practical. Here we have a promising new avenue along which the driver experience can be enhanced in novel and insightful ways. Tools and templates are provided so that engineers and designers can try different ways to boost vehicle safety, efficiency and enjoyment from a human centered perspective.
