The American Synthetic Rubber Research Program Peter J. T. Morris, 2017-01-30 This history of the government funded synthetic rubber research program 1942 1956 offers a rare analysis of a cooperative research program geared to the improvement of existing products and the creation of new ones The founders of the program believed the best way to further research in the new field was through collaboration among corporations universities and the federal government Morris concludes that in fact the effort was ultimately a failure and that vigorous competition proves the best way to stimulate innovation Government programs like the rubber research program are far better at improving existing products the author contends than creating wholly new ones

Polymer Pioneers Peter J. Morris, 2005-06 Accompanied by an introductory overview of the history of polymer science this book contains biographical sketches of 12 pioneers from Marcellin Berthollet and John Wesley Hyatt to Karl Ziegler and Giulio Natta It also includes time charts before each chapter that summarise significant events

Advances in New Materials J. Riffle, J.C. Salamone, 2012-12-06 of Polymer Chemistry Inc of the American Chemical Society held its The Division 15th Biennial Polymer Symposium on the topic Advances in New Materials November 17 21 1990 at the Pier 66 Resort and Marina in Ft Lauderdale Florida A three and one half day program was presented by recognized leaders in major areas of new polymeric materials The topics of the Biennial Symposium included new high performance polymers polymers for electronic applications electrically conducting polymers nonlinear optics new polymer systems and polymers derived from biological media These are the subject areas of this volume of Contemporary Topics in Polymer Science The intent of the Symposium was to focus on recent advances in polymeric materials The technical sessions were complemented by an initial poster session which augmented the various technical sessions A particular highlight of the meeting was the presentation to Professor Michael Szwarc of the 1990 Division of Polymer Chemistry Award by Dr J L Benham Chairman of the T Aymer Division During his Award address Professor Szwarc described how he had become a polymer chemist and later developed living polymers Without a doubt Professor Szwarc has made a profound contribution to the polymer field which has yielded many new forms of living polymerization

Chemical Sciences in the 20th Century Carsten Reinhardt, 2008-09-26 Chemistry in the last century was characterized by spectacular growth and advances stimulated by revolutionary theories and experimental breakthroughs Yet despite this rapid development the history of this scientific discipline has achieved only recently the status necessary to understand the effects of chemistry on the scientific and technological culture of the modern world This book addresses the bridging of boundaries between chemistry and the other classical disciplines of science physics and biology as well as the connections of chemistry to mathematics and technology Chemical research is represented as an interconnected patchwork of scientific specialties and this is shown by a mixture of case studies and broader overviews on the history of organic chemistry theoretical chemistry nuclear and cosmochemistry solid state chemistry and biotechnology All of these fields were at the center of the development

of twentieth century chemistry and the authors cover crucial topics such as the emergence of new subdisciplines and research fields the science technology relationship and national styles of scientific work This monograph represents a unique treasure trove for general historians and historians of science while also appealing to those interested in the theoretical background and development of modern chemistry

Inventing Polymer Science Yasu Furukawa, 2016-11-11 It would be difficult to overestimate the importance of polymer science to life in the twentieth century Developments in polymer chemistry and engineering have led not only to the creation of a variety of substances such as synthetic fibers synthetic rubber and plastic but also to discoveries about proteins DNA and other biological compounds that have revolutionized western medicine For these reasons the history of the discipline tells an important story about how both our material and intellectual worlds have come to be as they are Yasu Furukawa explores that history by tracing the emergence of macromolecular chemistry the true beginning of modern polymer science It is a lively book given human interest through its focus on the work of two of the central figures in the development of macromolecular chemistry Hermann Staudinger and Wallace Carothers In *Inventing Polymer Science* Furukawa examines the origins and development of the scientific work of Staudinger and Carothers illuminates their different styles in research and professional activities and contrasts the peculiar institutional and social milieux in which they pursued their goals

Macromolecular Science R. Ulrich, 2013-06-29 In 1974 as we approached the National Bicentennial and the Centenary of the American Chemical Society Professor Otto Vogl then Chairman of the Division of Polymer Chemistry arranged a very special symposium dedicated to a review of the history of the Division It was an extraordinary occasion which included remarks by Professors Herman Mark Charles Marvel William Bailey and Charles Overberger all past Chairmen of the Division The Executive Committee of the Division of Polymer Chemistry felt that 1976 deserved even more attention since it was to be also the 25th the Silver Anniversary of the Division of Polymer Chemistry This year would be a most appropriate one not only to review milestones in our discipline but also to look to the future It was decided to undertake this volume and Dr R D Ulrich agreed to serve as editor in assembling the collected papers It is the hope of the officers of the Division that this volume will serve many purposes a reference text a record and a source of perspective F E Bailey Chairman 1976 Division of Polymer Chemistry American Chemical Society vii Contents R D Ulrich The History of the ACS Division 1 of Polymer Chemistry Inc Bovey F A 31 F R Eirich 53 J D Ferry 63 P J Flory 69 Huggins M L 99 L Mandelkern 113 123 H F Mark C S Marvel 133 B Maxwell 143

The Interfacial Interactions in Polymeric Composites Güneri Akovali,2012-12-06 Polymer composites represent materials of great and of continuously growing importance Their potential for application appears to be limitless They have been the subject of numerous studies both at academic and industrial levels Much progress has been made in the incisive formulation of composites sophisticated methods of property evaluation have been developed in the past decade and many largely empirical solutions have been proposed to resolve the problem of their long term performance under typical conditions of use i e the use of silane or titanate coupling agents to enhance adhesion within composite materials Assuredly one of the most essential factors in the performance of these systems is the condition of the interface and interphase among the constituents of a given system It has become clear that it is the interface interphase and the interactions which take place in this part of a system which determine to a significant degree the initial properties of the material In order to achieve leadership in the formulation and application of polymer composites it is evident that in depth understanding of interfacial and interphase phenomena becomes a prerequisite Handbook of Thermoplastics Olagoke Olabisi,Kolapo
