Contemporary Trends In Algebraic Geometry And Algebraic Topology Shiing-shen Chern, Richard Hain, Lei Fu,2002-08-02 The Wei Liang Chow and Kuo Tsai Chen Memorial Conference was proposed and held by Prof S S Chern in Nankai Institute of Mathematics It was devoted to memorializing those two outstanding and original Chinese mathematicians who had made significant contributions to algebraic geometry and algebraic topology respectively It also provided a forum for leading mathematicians to expound and discuss their views on new ideas in these fields as well as trends in 21st Century mathematics About 100 mathematicians participated in the conference including Sir Michael Atiyah Jacob Palis Phillip Griffiths David Eisenbud Philippe Tondeur Yujiro Kawamata Tian Gang etc This invaluable volume contains the selected papers presented at the conference The topics include canonical maps of Gorenstein 3 folds fundamental groups of algebraic curves Chen's interated integrals algebraic fiber spaces and others **Contemporary Trends in Algebraic Geometry and** Algebraic Topology ,2002 Current Developments in Algebraic Geometry Lucia Caporaso, 2012-03-19 This volume based on a workshop by the MSRI offers an overview of the state of the art in many areas of algebraic geometry Geometry: Salt Lake City 2015 Tommaso de Fernex, Brendan Hassett, Mircea Mustață, Martin Olsson, Mihnea Popa, Richard Thomas, 2018-06-01 This is Part 1 of a two volume set Since Oscar Zariski organized a meeting in 1954 there has been a major algebraic geometry meeting every decade Woods Hole 1964 Arcata 1974 Bowdoin 1985 Santa Cruz 1995 and Seattle 2005 The American Mathematical Society has supported these summer institutes for over 50 years Their proceedings volumes have been extremely influential summarizing the state of algebraic geometry at the time and pointing to future developments The most recent Summer Institute in Algebraic Geometry was held July 2015 at the University of Utah in Salt Lake City sponsored by the AMS with the collaboration of the Clay Mathematics Institute This volume includes surveys growing out of plenary lectures and seminar talks during the meeting Some present a broad overview of their topics while others develop a distinctive perspective on an emerging topic Topics span both complex algebraic geometry and arithmetic questions specifically analytic techniques enumerative geometry moduli theory derived categories birational geometry tropical geometry Diophantine questions geometric representation theory characteristic and adic tools etc The resulting articles will be important references in these areas for years to come Recent Advances in Hodge Theory Matt Kerr, Gregory Pearlstein, 2016-02-04 Combines cutting edge research and expository articles in Hodge theory An essential reference for graduate students and researchers Handbook of Geometry and Topology of Singularities III José Luis Cisneros-Molina, Lê Dũng Tráng, José Seade, 2022-06-06 This is the third volume of the Handbook of Geometry and Topology of Singularities a series which aims to provide an accessible account of the state of the art of the subject its frontiers and its interactions with other areas of research This volume consists of ten chapters which provide an in depth and reader friendly survey of various important aspects of singularity theory Some of these complement topics previously explored in volumes I

and II such as for instance Zariski s equisingularity the interplay between isolated complex surface singularities and 3 manifold theory stratified Morse theory constructible sheaves the topology of the non critical levels of holomorphic functions and intersection cohomology Other chapters bring in new subjects such as the Thom Mather theory for maps characteristic classes for singular varieties mixed Hodge structures residues in complex analytic varieties nearby and vanishing cycles and more Singularities are ubiquitous in mathematics and science in general Singularity theory interacts energetically with the rest of mathematics acting as a crucible where different types of mathematical problems interact surprising connections are born and simple questions lead to ideas which resonate in other parts of the subject and in other subjects Authored by world experts the various contributions deal with both classical material and modern developments covering a wide range of topics which are linked to each other in fundamental ways. The book is addressed to graduate students and newcomers to the theory as well as to specialists who can use it as a guidebook <u>Differential Geometry And Physics - Proceedings Of The 23th</u> International Conference Of Differential Geometric Methods In Theoretical Physics Weiping Zhang, Mo-lin Ge, 2006-12-11 This volumes provides a comprehensive review of interactions between differential geometry and theoretical physics contributed by many leading scholars in these fields The contributions promise to play an important role in promoting the developments in these exciting areas Besides the plenary talks the coverage includes models and related topics in statistical physics quantum fields strings and M theory Yang Mills fields knot theory and related topics K theory including index theory and non commutative geometry mirror symmetry conformal and topological quantum field theory development of integrable systems and random matrix theory **Etale Cohomology Theory** Lei Fu,2011 Etale cohomology is an important branch in arithmetic geometry This book covers the main materials in SGA 1 SGA 4 SGA 4 1 2 and SGA 5 on etale cohomology theory which includes decent theory etale fundamental groups Galois cohomology etale cohomology derived categories base change theorems duality and I adic cohomology The prerequisites for reading this book are basic algebraic geometry and advanced commutative algebra Modern Trends in Algebra and Representation Theory David Jordan, Nadia Mazza, Sibylle Schroll, 2023-08-17 Expanding upon the material delivered during the LMS Autumn Algebra School 2020 this volume reflects the fruitful connections between different aspects of representation theory Each survey article addresses a specific subject from a modern angle beginning with an exploration of the representation theory of associative algebras followed by the coverage of important developments in Lie theory in the past two decades before the final sections introduce the reader to three strikingly different aspects of group theory Written at a level suitable for graduate students and researchers in related fields this book provides pure mathematicians with a springboard into the vast and growing literature in each area

Commutative Algebra and Noncommutative Algebraic Geometry David Eisenbud, Srikanth B. Iyengar, Anurag K. Singh, J. Toby Stafford, Michel Van den Bergh, 2015-11-19 This book surveys fundamental current topics in these two areas of research emphasising the lively interaction between them Volume 2 focuses on the most recent research

Noncommutative Algebraic Geometry Gwyn Bellamy, Daniel Rogalski, Travis Schedler, J. Toby Stafford, Michael Wemyss, 2016-06-20 This book provides a comprehensive introduction to the interactions between noncommutative algebra and classical algebraic geometry Iterated Integrals and Cycles on Algebraic Manifolds Bruno Harris, Kuo-Tsai Chen, 2004 This subject has been of great interest both to topologists and tonumber theorists. The first part of this book describes some of thework of Kuo Tsai Chen on iterated integrals and the fundamental groupof a manifold The author attempts to make his exposition accessible to beginning graduate students. He then proceeds to apply Chen sconstructions to algebraic geometry showing how this leads to someresults on algebraic cycles and the AbelOCoJacobihomomorphism Finally he presents a more general point of viewrelating Chen's integrals to a generalization of the concept oflinking numbers and ends up with a new invariant of homology classes in a projective algebraic manifold. The book is based on a course given by the author at the Nankai Institute of Mathematics in the fallof 2001 **Proceedings of the International Conference on** Complex Geometry and Related Fields Zhijie Chen, 2007 In commemoration and celebration of the tenth anniversary of the Institute of Mathematics at East China Normal University an International Conference on complex geometry and related fields recently convened This collection presents some of the conference highlights dealing with various and significant topics of differential and algebraic geometry while exploring their connections to number theory and mathematical physics Information for our distributors Titles in this series are co published with International Press Cambridge MA **Cohomology Theory (Revised Edition)** Lei Fu,2015-02-27 Etale cohomology is an important branch in arithmetic geometry This book covers the main materials in SGA 1 SGA 4 SGA 4 1 2 and SGA 5 on etale cohomology theory which includes decent theory etale fundamental groups Galois cohomology etale cohomology derived categories base change theorems duality and adic cohomology The prerequisites for reading this book are basic algebraic geometry and advanced commutative algebra
