models that can better explain the significance of each economic assumption Simplified models are also presented for real estate and fixed capital investment markets transportation and land use planning The book concludes with a discussion of linear programming and the Herbert Stevens and the Ripper Varaiya models A fresh presentation of the theories behind urban economics this book emphasizes the links between state and economy and challenges the reader to see its theories in a new light As such this book will be of interest to scholars students and practitioners of economics public policy public administration urban policy and city and urban planning
