Act-based Conceptions of Propositional Content Friederike Moltmann,Markus Textor,2017 The notion of a propositional content plays a central role in contemporary philosophy of language Propositional content makes up both the meaning of sentences and the content of propositional attitudes such as belief One particular view about propositional content has been dominant in analytic philosophy namely the Fregean conception of propositions as abstract mind independent objects that come with truth conditions But propositions in this sense raise a range of issues which have become a center of debate in current philosophy of language In particular how should propositions as abstract objects be understood and how can they represent things and be true or false A number of philosophers in contemporary analytic philosophy as well as in early analytic philosophy and phenomenology have approached the notion of a propositional content in a different way not by starting out with an abstract truth bearer but by focusing on cognitive acts of agents such as acts of judging It is in terms of such acts that the notion of a propositional content on their view should be understood The act based perspective historically goes back to the work of Central European philosophers in particular that of Husserl Twardowski Meinong and Reinach However their work has been unduly neglected and is in fact largely inaccessible to contemporary analytic philosophers The volume presents a central selection of work of these philosophers that bear on an act based conception of philosophical content some of which in new translations one paper by Reinach some of which published in English for the very first time two papers by Twardowski In addition the volume presents new work by leading contemporary philosophers of language pursuing or discussing an act based conception of propositional content Moreover the book contains a crosslinguistic study of nominalizations for actions and products a distinction that plays a central role in the philosophy of language of Twardowski

efforts are often focused on instantaneous experience Is it really possible to build a scientific foundation for metaphysics today And what role might thinking play in such a truly contemporary spirituality There is a tradition traceable to Aristotle and leading to Rudolf Steiner that seeks to establish metaphysics as a science Connecting with this noetic practise Steffen Hartmann argues that the sure path of personal development begins with pure thought and meditation Only then under the right conditions does it lead to spiritual experience Through developing our mental faculties to the point where we can properly evaluate such experience we build a new foundation for understanding the I our essential core Self awareness of the I in pure thinking is the eye of the needle through which we should pass In thought we can even unite with the essence of the angels By enriching our thinking we can access as conscious mindful individuals the realm of angelic beings Angels are messengers of light In this book the angels themselves are shining their light in the writings of Steffen Hartmann Johannes Greiner The strength of this text lies in its purposeful progression It is like a guided tour up a mountain that after a lot of effort offers a wonderful panoramic view Matthias Bideau Die Drei

The Collected Works of Georg Wilhelm Friedrich Hegel. Illustrated Georg Wilhelm Friedrich Hegel, 2021-04-14 The works of German thinker Georg Wilhelm Friedrich Hegel represent the apex of German classical philosophy It was Hegel who pounded out the dialectical methodology that shaped the doctrine of idealism into a fully formed and deeply thought out philosophical system For many philosophical contemporaries the name Hegel is synonymous with the word philosopher Friedrich Nietzsche once boldly stated that Hegel is taste and speaking of Hegel the thinker Vladimir Solovyov remarked of all the philosophers only to Hegel did philosophy mean everything The book includes the following of Hegel s works The Phenomenology of Spirit The Logic of Hegel Hegel s Philosophy of Mind Elements of the Philosophy of Right The Philosophy of Fine Art The Philosophy of History Lectures on the History of Philosophy Lectures on the Proofs of the Existence of God Science of Logic Georg Wilhelm Friedrich Hegel, 2022-11-13 Georg Wilhelm Friedrich Hegel s Science of Logic is a profound exploration of the nature and development of logic as a dialectical process Written in the early 19th century the text reflects Hegel s philosophical project to reconcile ideas of contradiction and unity where he meticulously dissects traditional logical structures Employing a dense yet methodical style Hegel transforms logic from a mere tool for scientific inquiry into an organic system that captures the dynamic and evolving nature of reality itself Notably the work offers a systematic account of concepts such as being essence and notion thus situating itself within the broader context of German Idealism Hegel a pivotal figure in Western philosophy was deeply influenced by the tumultuous socio political landscape of his time particularly the aftermath of the French Revolution His engagement with metaphysics and epistemology paved the way for this foundational work as Hegel sought to articulate a comprehensive framework that accounted for human thought and its evolution in the face of historical development His intellectual environment steeped in Enlightenment ideals yet marked by emerging contradictions directly shaped the themes present in Science of Logic This seminal work is recommended for readers keen on understanding the

intricacies of Hegelian thought and its enduring impact on contemporary philosophy With its ambitious scope and innovative treatment of logic *Science of Logic* challenges readers to reconsider the relationship between thought and reality making it an essential read for students of philosophy logic and even the social sciences *Design Research on Learning and Thinking in Educational Settings* David Dai, 2012-04-23 The key question this book addresses is how to identify and create optimal conditions for the kind of learning and development that is especially important for effectively functioning in the 21st century Taking a new approach to this long debated issue it looks at how a design research based science of learning with its practical models and related design research can provide insights and integrated models of how human beings actually function and grow in the social dynamics of educational settings with all their affordances and constraints More specifically How can specific domains or subject matters be taught for broad intellectual development How can technology be integrated in enhancing human functioning How can the social organization of classroom learning be optimized to create social norms for promoting deep intellectual engagement and personal growth Part I is concerned with broad conceptual and technical issues regarding cultivating intellectual potential with a focus on how design research might fill in an important a niche in addressing these issues Part II presents specific design work in terms of design principles models and prototypes *The Human Intellect, with an Introduction Upon Psychology and the Soul* Noah Porter (the Younger.), 1872
