Eaton, Michael Starbird, 1983-07 **Decompositions of Manifolds**, 1986-12-22 *Decompositions of Manifolds* *Cellular Decompositions of 3-Manifolds that Yield 3-Manifolds* Steve Armentrout, 1971 Geometric Topology and Shape Theory Sibe Mardesic, Jack Segal, 2006-11-14 The aim of this international conference the third of its type was to survey recent developments in Geometric Topology and Shape Theory with an emphasis on their interaction The volume contains original research papers and carefully selected survey of currently active areas The main topics and themes represented by the papers of this volume include decomposition theory cell like mappings and CE equivalent compacta covering dimension versus cohomological dimension ANR s and LC_n compacta homology manifolds embeddings of continua into manifolds complement theorems in shape theory approximate fibrations and shape fibrations fibered shape exact homologies and strong shape theory **Inverse Limits** W.T. Ingram, William S. Mahavier, 2011-11-06 Inverse limits provide a powerful tool for constructing complicated spaces from simple ones They also turn the study of a dynamical system consisting of a space and a self map into a study of a likely more complicated space and a self homeomorphism In four chapters along with an appendix containing background material the authors develop the theory of inverse limits The book begins with an introduction through inverse limits on $0, 1$ before moving to a general treatment of the subject Special topics in continuum theory complete the book Although it is not a book on dynamics the influence of dynamics can be seen throughout for instance it includes studies of inverse limits with maps from families of maps that are of interest to dynamicists such as the logistic and the tent families This book will serve as a useful reference to graduate students and researchers in continuum theory and dynamical systems Researchers working in applied areas who are discovering inverse limits in their work will also benefit from this book Decompositions of Three-manifolds Into Toroidal Continua Tom Eugene Knoblauch, 1972 *Topology, Geometry, and Dynamics: V. Macías,2018-07-24 This book is a significant companion text to the existing literature on continuum theory It opens with background information of continuum theory so often missing from the preceding publications and then explores the following topics inverse limits the Jones set function T homogenous continua and n fold hyperspaces In this new edition of the book the author builds on the aforementioned topics including the unprecedented presentation of n fold hyperspace suspensions and induced maps on n fold hyperspaces The first edition of the book has had a remarkable impact on the continuum theory community After twelve years this updated version will also prove to be an excellent resource within the field of topology
