Republic of Congo: Request for a Three-Year Arrangement Under the Extended Credit Facility-Press Release; Staff Report; and Statement by the Executive Director for the Republic of Congo International Monetary Fund. African Dept., 2022-02-17. A new wave of the COVID-19 pandemic is creating headwinds for the nascent economic recovery from the deep recession spurred by the pandemic's onset and related oil price shocks. Over the medium term, reforms supporting improved governance, economic diversification, and resilience will help confront challenges from climate change and the global transition to low carbon economies, gradually resulting in improved incomes, job creation, inequality, and exit from fragility. In the near term, fiscal space to address these challenges is limited. Although debt sustainability was recently restored, large liquidity risks and vulnerabilities remain. Due to arrears and on-going negotiations with an external commercial creditor, debt is classified as in distress. The recent AIV consultation concluded on September 24, 2021.

Amount of Assignment Information and Expected Performance of Military Personnel Richard C. Sorenson,1967 The COMPUTERIZED MANPOWER SYSTEMS Task seeks to integrate the growing body of psychological mathematical and computer technology in the solution of problems in military manpower One of its objectives has been to develop computer aided research approaches and simulation tools useful in 1 defining general principles of manpower systems and 2 formulation and evaluation of manpower policies and procedures Technical Research Report 1152 summarizes the research methodology developed or adapted by the U S Army Personnel Research Office to deal with manpower information problems Particular concern is with relationships between the amount and type of information on which assignment decisions are made and the performance of the Army's enlisted personnel Typical findings are Total performance of Army enlisted personnel could be enhanced by using as performance estimates in optimal assignment procedures the full 2 or 3 digit scores on qualification measures The effect of the one digit score is more serious when the range of ability in the allocation group is narrow and when the general level of ability is lowered More precise prediction of job performance could be attained by introducing performance estimates more closely resembling least squares regression estimates based on the full Army Classification Battery Total performance could be increased by refinement of the Army Personnel System to afford additional job categories Optimization techniques may be beneficially applied in the manpower system even though estimates of performance are ordinal including various ways of ranking and the assumption of an interval scale is not strictly met

Readers learn how to develop culminating and progressive assessments as well as plan for continuous performance based assessments and acquire effective teaching strategies for standards based instruction. All content is aligned with current SHAPE America national standards and is supported by research from educational assessment giants such as Tom Guskey, Richard Stiggins, Dylan William, Robert Marzano, and James Popham. The book is organized into four parts with part I introducing readers to performance based assessment issues such as the need for change in the assessment process, how assessments can be used to enhance learning, the various assessment domains and methods, and the use of rubrics in assessments. Part II explores aspects of managing and implementing physical education lessons. In part III, readers learn about the components of performance based assessment, and in part IV, they delve into issues affecting grading and implementing continuous performance based assessment. This groundbreaking text explains the theory behind assessment and through its numerous models shows how to apply that theory in practice. The text is filled with practical examples, much more so than the typical assessment book. And it is supplemented by a web resource that houses forms, charts, and other material for instructors to use in their performance based assessments. Class size, skill levels, and time factors can make assessments difficult but far from impossible. The examples in the book are meant to be modified as needed, with the ideas in the book used as starting points. Teachers can use the material, examples, and tools in this book to create assessments that enhance student learning, providing them feedback to let them know what they have accomplished and how they can work toward goals of greater competence.
