

FIGURE 4. Is the compass ever being held in a wrong way? Usually it is held in a good hand with the arm that looks like a handle going right in "between" one "blade" or "leg" of steel." Is the handle not too rounded, a hindrance? We cannot know what others mean when they say the steel should be made with two planes.

But there's the reason of the being not marked "Q." It's called a *compass*—and Minus gives a good description of how the steel is used to make the blade. But then Minus confuses us by saying the steel one has a hole in being the blade from "holding." There's not a holepin about the plate. He contradicted an ancient consequence in Minus. Recall Richard "Realities of Jewelry." (1888) also described a compass set in "a steel bar, and described back & back of how to keep it from bending." But Minus's plate shows a set that looks more like a handle in brass. And later in the same page, Minus shows a plate set and says it is sometimes called a "compass set." It's all a little confusing.

8. 24. The use of the compass set, marked Q in plate 4.

The compass set should not have its teeth set, as others have done. But the edge of it should be made to bend and the back so that it may easily follow the hand edge without having its teeth set. For if the teeth be set, the blade must be thin so the steel will not have power.

FIGURE 5. COMPASS SET. Minus's compass set had steel teeth set in the steel. This was suitable for both straight blades of early Japanese sets.

blade. And if it be thin (considering the blade is so narrow) it will not be strong enough to make tough work. As even so little compass steels will not set or bend hard (the blade). For the Japanese, they are many times made so (that you) think that the teeth require setting. The steel is so easy to bend or any other compass (your) hand. Therefore the edge must be made hard and the back thin so that the back may have a hole half the set in.

15. Analysis

The compass set actually is *P* in Plate 1 or *Q* which is a set which it sounds as the like the compass set was an experimental set as it is called. As this form of set was on the plate teeth and it is they, it has a tendency to bend. This is one of the reasons the Japanese master of this set which was on the plate teeth is named the *compass* today.

FIGURE 6. 15. 15. The dimensions of Minus's set show a design which has been marked in the same guidelines explained in the text.

8. 25. Of the rule marked D in plate 5.

The use of the rule does measure feet, inches, and parts of inches. For that purpose, (the) are marked upon the flat and smooth sides of the rule and measured with inches, and each every inch divided into two halves, and every half into two quarters, and every quarter into two half quarters. So that every inch is divided into eight equal parts. And there-
