

MG 1 : Facteurs influençant la composition d'un système en équilibre chimique (équilibres ioniques exclus)

Intro : Définitions système, équilibre chimique, variance (DA) il faut $v-2$ pour équilibre, sinon si on change un facteur, rupture d'équilibre. Cet équilibre peut être influencé par de nombreux facteurs qu'il est important de maîtriser pour avoir le meilleur rendement possible (industrie). On envisage la modification d'un seul paramètre, tous les autres étant maintenus constants, cette modification entraînant soit la variation de la constante d'équilibre thermodynamique (cas de T et du solvant), soit la variation du quotient réactionnel. Lors de la présentation, il faut s'efforcer de bien mettre en évidence le fait que le système est à l'équilibre chimique, et qu'un seul paramètre a été modifié.

I) Équilibres en phase gaz

1) Influence de la pression

2) Influence de la température

Étude de l'équilibre entre N_2O_2 et N_2O_4 - 45 min - B.P 878 dec 2005 p 1173

Méthode : qualitatif, gaz dans seringue

Manip : influence de P, influence de T

Parler des lois de Van't Hoff et LeChatelier. Faire calcul de variance

MOB

Transition : La température intervient aussi en phase condensée ?

II) Équilibres en phase condensée

1) Influence de la température

Enthalpie de dissolution de l'acide benzoïque - 2h - Fesset 106

OU CHALCOSE RECI

Méthode : dosage colorimétrique et pH-métrie

Manip : chute de burette

Attention, solubilité KCl dépend de température, bien vérifier que c'est saturé

Transition : et pour une réaction athermique ... ?

2) Influence de l'ajout ou du retrait d'un constituant du système

Équilibre d'esterification - 2h30 - Blanchard p187

Méthode : synthèse, dosage colorimétrique et pH-métrie

Manip : chute de burette

Faire la manip normale pour titrer, la faire avec trois fois plus d'éthanol. Remplacer acide. Doser avec soude 2 M et pas 0,5 M !

OU JFLM Barbe p 86 DEAN STARK

Transition : dans cet équilibre il n'y avait pas de solvant ... et quand il y en a un ?

3) Influence du solvant

Équilibre acide-base - 2h - Blanchard p 278 et JD 12

Méthode : Dosage colorimétrique et potentiométrique

Manip : lancement, chute de burette

Modip du JD et solvants de Blanchard

C) : importance en industrie de maîtriser les équilibres.

The New Natural History of Madagascar Steven M. Goodman, 2022-11-15 A marvelously illustrated reference to the natural wonders of one of the most spectacular places on earth Separated from Africa's mainland for tens of millions of years Madagascar has evolved a breathtaking wealth of biodiversity becoming home to thousands of species found nowhere else on the planet The New Natural History of Madagascar provides the most comprehensive up to date synthesis available of this island nation's priceless biological

treasures Now fully revised and expanded this beautifully illustrated compendium features contributions by more than 600 globally renowned experts who cover the history of scientific exploration in Madagascar as well as the island's geology and soils climate forest ecology human ecology marine and coastal ecosystems plants invertebrates fishes amphibians reptiles birds and mammals This invaluable two volume reference also includes detailed discussions of conservation efforts in Madagascar that showcase several successful protected area programs that can serve as models for threatened ecosystems throughout the world Provides the most comprehensive overview of Madagascar's rich natural history Coedited by 18 different specialists Features hundreds of new contributions by world class experts Includes hundreds of new illustrations Covers a broad array of topics from geology and climate to animals plants and marine life Sheds light on newly discovered species and draws on the latest science An essential resource for anyone interested in Madagascar or tropical ecosystems in general from biologists and conservationists to ecotourists and armchair naturalists Landscape

Approaches in Mammalian Ecology and Conservation William Zander Lidicker, 1995 This book explores the latest ideas about landscapes as they apply to mammalian ecology and conservation The Contributors examine mammalian field studies and experimental model systems to landscape ecology and then present data on the use of such experimental protocols With its international perspective and incisive coverage this volume will be an essential resource for anyone concerned with mammalian and landscape ecology **Asdell's Patterns of Mammalian Reproduction** Virginia Douglass Hayssen, Ari Van Tienhoven, Ans Van Tienhoven, 1993

Since the appearance of the second edition of Sydney A Asdell's widely used *Patterns of Mammalian Reproduction* in 1964 the field of reproductive physiology has expanded dramatically Accordingly this revision adopts a different structure from previous editions substituting empirical delineations for physiological interpretations With the emphases now on a presentation of the published facts of mammalian reproduction it provides a thorough compilation of what is known about the basic reproductive biology of each of the 4300 mammalian species To gather information the authors examined more than 20 000 publications dating up to 1992 They used primary sources as much as possible supplementing them with English translations of Russian Finnish Chinese and Japanese journals The data are presented in taxonomic order Each familial account summarizes the pattern of reproduction for the family and provides lists of citations arranged by topic of the literature on the endocrinology reproductive anatomy and reproductive physiology of the family Following each account is a tabular listing of species specific data for neonatal mass and size weaning mass and size litter size age at sexual maturity estrous cycle length gestation length lactation length number of litters per year and seasonality of reproduction For each of these reproductive variables the range of data gleaned from the literature is given together with the source of each value listed Virginia Hayssen is Assistant Professor of Biology at Smith College Ari Van Tienhoven is Professor of Animal Physiology Emeritus at Cornell University Ans Van Tienhoven assisted in the compilation of data for the book

Ringtailed Lemur Biology Alison Jolly, Robert W. Sussman, Naoki Koyama, Hanta Rasamimanana, 2006-11-30 This book is a

truly international collaboration with editors based on four continents and first authors from Canada France Japan Madagascar the United Kingdom and the United States Clearly there is something attractive about studying Lemur catta the ringtailed lemur Perhaps it is the lemurs themselves Why study ringtailed lemurs Because lemurs are a separate radiation of primates from the monkeys apes and humans Because ringtails live in the largest social groups of any known lemur and therefore offer the closest comparison with other social primates including ourselves And also because ringtails have become the flagship species of Madagascar Some 70 species or subspecies of lemurs inhabit Madagascar Each kind has its own fascinating story but ringtails are the ones that everyone thinks they know That black and white tail adorns tourist brochures and school notebooks and banknotes All the same after 40 years of field study we don't know nearly enough In this book we make a first estimate on how many might be alive today but we do not know how many ringtailed lemurs and how many southern forests will survive This book explores part of what we do know Its four sections are I Distribution Ringtailed Lemurs in Madagascar II Ringtails and Their Forests Feeding and Ranging Behavior III Social Behavior Within and Between Troops and finally IV Health and Disease Of course all these issues are interrelated

Primate Anti-Predator Strategies Sharon Gursky-Doyen, K.A.I. Nekaris, 2007-05-31 Since the 1960s primatologists have recognized the impact of predation on the evolution of morphology the social systems and cognitive behavior of monkeys and apes but few studies considered its impact on the prosimians lemurs lorises galagos and tarsiers This comprehensive volume written by experts in the field narrows this gap by highlighting the effect of predation on the order Primates in general Theoretical approaches to understanding how primates perceive predation threat as well as proximate and ultimate causes to address threat and attack are considered across the primate order Although this volume concentrates on the least known group in this theoretical area the prosimians contributions by researchers on numerous primate taxa across four major geographical regions make this a novel and exciting contribution to students interested in primate evolution and ecology

Mammals of Africa Jonathan Kingdon, David Happold, Thomas Butynski, Michael Hoffmann, Meredith Happold, Jan Kalina, 2013-05-23 Mammals of Africa MoA is a series of six volumes which describes in detail every currently recognized species of African land mammal This is the first time that such extensive coverage has ever been attempted and the volumes incorporate the very latest information and detailed discussion of the morphology distribution biology and evolution including reference to fossil and molecular data of Africa's mammals With 1 160 species and 16 orders Africa has the greatest diversity and abundance of mammals in the world The reasons for this and the mechanisms behind their evolution are given special attention in the series Each volume follows the same format with detailed profiles of every species and higher taxa The series includes some 660 colour illustrations by Jonathan Kingdon and his many drawings highlight details of morphology and behaviour of the species

concerned Diagrams schematic details and line drawings of skulls and jaws are by Jonathan Kingdon and Meredith Happold Every species also includes a detailed distribution map Extensive references alert readers to more detailed information

The Natural History of Primates Robert W. Sussman,Donna Hart,Ian C. Colquhoun,2022-10-20

The interest in primates from lemurs to gorillas has never been greater Primatologists are continually finding evidence in the behavior and ecology of our closest genetic relatives that sheds light on human origins So just who are these 520 species of complex and intelligent mammals inhabiting the Neotropics Africa Madagascar and Asia

The Natural History of Primates provides the most current information on wild primates from experts who have studied them in their natural environments This volume provides up to date facts and figures on how groups of social primates interact with each other and the plants and other animal species in their ecosystems what they eat which predators might eat them how males and females seek mates how infants are raised and myriad other fascinating details about their visual and vocal communication their ability to craft and use tools and the varieties of locomotion they employ

As human populations continue to expand into the rainforests savannas and woodlands where nonhuman primates dwell the preservation of these species becomes ever more important

The Natural History of Primates is unique in its emphasis on the conservation status of primate species and its ample discussions of how humans and nonhuman primates can coexist in the twenty first century
