Operator Theory and Its Applications Israel Gohberg, J. William Helton, L. Rodman, 1988 **Lectures on Operator Theory and Its Applications** Albrecht Böttcher, 1996 Much of the importance of mathematics lies in its ability to provide theories which are useful in widely different fields of endeavour A good example is the large and amorphous body of knowledge known as the theory of linear operators or operator theory which came to life about a century ago as a theory to encompass properties common to matrix differential and integral operators Thus it is a primary purpose of operator theory to provide a coherent body of knowledge which can explain phenomena common to the enormous variety of problems in which such linear operators play a part The theory is a vital part of functional analysis whose methods and techniques are one of the major advances of twentieth century mathematics and now play a pervasive role in the modeling of phenomena in probability imaging signal processing systems theory etc as well as in the more traditional areas of theoretical physics and mechanics This book is based on lectures presented at a meeting on operator theory and its applications held at the Fields Institute in 1994 **Contributions to Operator Theory and its Applications** I. areas of operator theory and its applications and will be of interest to a wide group of researchers working in pure and applied mathematics

Contributions to Operator Theory and Its Applications I. Gohberg, L. Rodman, 1988 *Current Trends in Operator Theory and its Applications* Joseph A. Ball, J. William Helton, Martin Klaus, Leiba Rodman, 2012-12-06 Many developments on the cutting edge of research in operator theory and its applications are reflected in this collection of original and review articles Particular emphasis lies on highlighting the interplay between operator theory and applications from other areas such as multi dimensional systems and function theory of several complex variables distributed parameter systems and control theory mathematical physics wavelets and numerical analysis **Operator Theory, System Theory and Related Topics** Daniel Alpay, Victor Vinnikov, 2012-12-06 This volume presents the refereed proceedings of the Conference in Operator Theory in Honour of Moshe Livsic 80th Birthday held June 29 to July 4 1997 at the Ben Gurion University of the Negev Beer Sheva Israel and at the Weizmann Institute of Science Rehovot Israel The volume contains papers in operator theory and its applications understood in a very wide sense many of them reflecting 1 directly or indirectly a profound impact of the work of Moshe Livsic Moshe Mikhail Samuilovich Livsic was born on July 4 1917 in the small town of Pokotilova near Uman in the province of Kiev in the Ukraine his family moved to Odessa when he was four years old In 1933 he enrolled in the Department of Physics and Mathematics at the Odessa State University where he became a student of M G Krein and an active participant in Krein's seminar one of the centres where the ideas and methods of functional analysis and operator theory were being developed Besides M G Krein M S Livsic was strongly influenced B Va Levin an outstanding specialist in the theory of analytic functions A by deep understanding of operator theory as well as function theory and a penetrating search of connections between the two were to become one of the landmarks of M S Livsic's work M S Livsic defended his Ph D **Contributions to Operator Theory in Spaces with an Indefinite Metric** Aad Dijkma, Israel Gohberg, Marinus A. Kaashoek, Reinhard Mennicken, 2012-12-06 This volume is dedicated to Heinz Langer a leading expert in spectral analysis and its applications in particular to operators in spaces with an indefinite metric on the occasion of his 60th birthday The book begins with his biography and list of publications It contains a selection of research papers most of which are devoted to spectral analysis of operators or operator pencils with applications to ordinary and partial differential equations Other papers deal with time varying systems interpolation and factorization problems and topics from mathematical physics About half of the papers contain further developments in the theory of operators in spaces with an indefinite metric and treat new applications The book is of interest to a wide audience of pure and applied mathematicians *Operator Theory in Harmonic and Non-commutative Analysis* Joseph A. Ball, Michael A. Dritschel, A.F.M. ter Elst, Pierre Portal, Denis Potapov, 2014-06-21 This book contains the proceedings of the 23rd International Workshop on Operator Theory and its Applications IWOTA 2012 which was held at the University of New South Wales Sydney Australia from 16 July to 20 July 2012 It includes twelve articles presenting both surveys of current research in operator theory and original results **Orthogonal Systems and**

Convolution Operators Robert Ellis, Israel Gohberg, 2003 The main concern of this book is the distribution of zeros of polynomials that are orthogonal on the unit circle with respect to an indefinite weighted scalar or inner product The first theorem of this type proved by M G Krein was a far reaching generalization of G Szeg's result for the positive definite case A continuous analogue of that theorem was proved by Krein and H Langer These results as well as many generalizations and extensions are thoroughly treated in this book A unifying theme is the general problem of orthogonalization with invertible squares in modules over C algebras Particular modules that are considered in detail include modules of matrices matrix polynomials matrix valued functions linear operators and others One of the central features of this book is the interplay between orthogonal polynomials and their generalizations on the one hand and operator theory especially the theory of Toeplitz matrices and operators and Fredholm and Wiener Hopf operators on the other hand The book is of interest to both engineers and specialists in analysis

Operator Theory and Complex Analysis J. K. Aggarwal, 1993-01-22 This volume presents a set of papers based on the proceedings of the NATO Advanced Research Workshop on Multisensor Fusion for Computer Vision held in Grenoble France in June 1989 The workshop focused on the fusion or integration of sensor information to achieve the optimum interpretation of a scene The papers cover a broad range of topics including principles and issues in multisensor fusion information fusion for navigation multisensor fusion for object recognition network approaches to multisensor fusion computer architectures for multisensor fusion and applications of multisensor fusion The authors have documented their own research and in so doing have presented the state of the art in the field Each author is a recognized leader in his or her area in the academic governmental or industrial research community Several contributors present novel points of view on the integration of information The book gives a representative picture of current progress in multisensor fusion for computer vision among the leading research groups in Europe and North America
