The Geology of Continental Margins C.A. Burk, C.L. Drake, 2013-12-20 The continental margins of the world constitute the most impressive and largest physiographic feature of the earth s surface and one of fundamentally great geological significance Continental margins have been the subject of increasing attention in recent years an interest focused by a body of new data that has provided new insights into their character This interest was further stimulated by the realization that in addition to the abundant living resources continental margins contain petroleum and mineral resources that are accessible with existing technology This realization along with their basic geological importance has provoked further research into the nature of continental margins throughout the world A summary of these findings as related to both recent and ancient continental margins is the subject of this book At various times in the past we had been approached individually to prepare a

basic reference to continental margins we then proposed to do such a volume jointly However the stimulus for the present volume eventually arose from a Penrose Conference arranged through the Geological Society of America This conference was attended by specialists of numerous disciplines and from throughout the world many of whom insisted that such a volume would be both timely and useful Consequently we agreed to undertake the task of assembling this book with the objectives of making it available as soon and as inexpensively as possible **Antarctic Journal of the United States** ,1973

Comparing the Geological and Fossil Records Alistair McGowan,Andrew B. Smith,2011 The past decade has witnessed a major revival in attempts to separate biodiversity signals from biases imposed by sampling and the architecture of the rock record How large a problem this poses to our understanding of biodiversity patterns remains debatable and new approaches are being developed to investigate this question Here palaeobiologists with widely differing approaches and interests explore the problems of extracting reliable information on biodiversity change from an imperfect geological record Topics covered range from the application of information theoretic approaches that identify directional causal relationships to an in depth study of how geological biases could influence our understanding of dinosaur evolution New Serial Titles ,1998 A union list of serials commencing publication after Dec 31 1949 *Main Tectonic Events and Metallogeny of the North China Craton* Mingguo Zhai,Yue Zhao,Taiping Zhao,2016-07-25 This book focuses on the metallogeny and main tectonic events of the North China Craton from early Precambrian to Phanerozoic It covers the Archean crustal growth Paleoproterozoic rifting subduction collision processes Great Oxidation Event Meso Neoproterozoic multiple rifting Phanerozoic reworking of the North China Craton as well as metallogeny related to above different processes The North China Craton is one of the oldest cratons in the world It has experienced a complex geological evolution since the early Precambrian and carries important records of secular changes in tectonics and metallogeny It provides a systematic review and new results on the growth and evolution of the North China Craton and metallogeny It will be of broad interest to the earth scientists working in the fields of economic geology geochemistry and tectonics of the North China Craton and eastern Asian
