Control Mechanisms In Animal Cells Specific Growth Factors:

Control Mechanisms in Animal Cells Luis J. De Asua, **Oncology Overview**, 1982 **Control Mechanism in Animal Cells**, 1980 **Handbook of Growth Factors** Enrique Pimentel, 1994-06-02 Volume I of this book provides a comprehensive discussion of the factors involved in regulation of the cell cycle the general biological properties of growth factors and the receptor and postreceptor mechanisms of action of these signaling agents It evaluates the possible role of growth factors in the regulation of proto oncogene and tumor suppressor gene expression and the development of neoplastic processes is discussed in detail **Estrogen/antiestrogen Action and Breast Cancer Therapy** Virgil Craig Jordan, 1986 This book marks one of the achievements of the Estrogen and Antiestrogen Action Basic and Clinical Aspects Wisconsin Clinical Cancer Center conference in June 1984 It is not intended to be a recount of the meeting proceedings but is rather a historical review of the development of this field of endeavor during the past 30 years The chapters have been written by many of the leading experts in the field who were asked to recount the development of a particular area or laboratory idea in which they had been personally involved The book is intended to provide both scientists and clinicians with a single volume overview of both the basic principles of hormonal control of breast cancer and the recent clinical results from cooperative groups around the world Cell and Muscle Motility Jerry Shay, 2013-06-29 The term cytoskeleton in muscle and nonmuscle cells refers to fibrous proteins that are directly or indirectly associated with cell shape contractility and or motility These cytoskeletal elements include microtubules and associated proteins microfilaments and their binding proteins and lastly intermediate filaments Even though the structure and function of myosin and troponin have been extensively investigated in muscle cells considerably less is known about their functions in nonmuscle cells they are often referred to generically as actin binding proteins as are actinin filamin vinculin and others Indeed most nonmuscle researchers are unaware that the term intermediate filament was derived from the observation that the diameter of intermediate filaments is intermediate between those of actin 5 nm and myosin 15 nm and not intermediate between those of actin 5 nm and microtubules 25 nm It has therefore been the purpose of this series to attempt to bridge the communication gap that appears to exist between muscle and nonmuscle researchers For those students and active scientists who are faced with the task of absorbing new data and concepts at an ever accelerating rate review essays are an excellent way to keep up The essays in this volume as well as in the previous ones focus on topics of current interest They are intended to be critical rather than exhaustive *Human Growth* Frank Falkner, J.M. Tanner, 2012-12-06 **Current Catalog** National Library of Medicine (U.S.), 1980 First multi year cumulation covers six years 1965-70 **Fetal Antigens and Cancer** David Evered, Julie Whelan, 2009-09-14 The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia in which groups of leading scientists from a range of topics across biology chemistry and medicine assembled to present papers and discuss results The Novartis Foundation originally known as the Ciba Foundation is well known to

scientists and clinicians around the world *Peptide Growth Factors and Their Receptors I* Michael B. Sporn, Anita B. Roberts, 2012-12-06 This two volume treatise the collected effort of more than 50 authors represents the first comprehensive survey of the chemistry and biology of the set of molecules known as peptide growth factors Although there have been many symposia on this topic and numerous publications of reviews dealing with selected subsets of growth factors the entire field has never been covered in a single treatise It is essential to do this at the present time as the number of journal articles on peptide growth factors now makes it almost impossible for anyone person to stay informed on this subject by reading the primary literature At the same time it is becoming increasingly apparent that these substances are of universal importance in biology and medicine and that the original classification of these molecules based on the laboratory setting of their discovery as growth factors lymphokines cytokines or colony stimulating factors was quite artifactual they are in fact the basis of a common language for intercellular communication As a set they affect essentially every cell in the body and in this regard they provide the basis to develop a unified science of cell biology germane to all of biomedical research This treatise is divided into four main sections After three introductory chapters its principal focus is the detailed description of each of the major peptide growth factors in 26 individual chapters *Hormones Growth Factors & Oncogenes* Enrique Pimentel, 1987-06-30 This text examines the hormones and peptide growth factors involved in the regulation of metabolism growth and differentiation in metazoan organisms and proto oncogene expression Investigates protein products of some proto oncogenes for involvement in the transductional and post transductional and mechanisms of hormones and peptide growth factors

PHS-supported Research: pt. A. Subject access A-H, 1992 *Published Scientific Papers of the National Institutes of Health*
National Institutes of Health (U.S.), 1982 Each issue lists papers published during the preceding year **National Library
of Medicine Current Catalog** National Library of Medicine (U.S.), 1985 The Saga of the Nerve Growth Factor Rita
Levi-Montalcini, 1997 This volume is a collection of articles written by Nobel Laureate Rita Levi Montalcini and published
from 1942 to 1995 Studies described in the first part set the stage for the discovery of a protein molecule which became
known as the Nerve Growth Factor NGF described in detail in the second part The NGF synthesized in minute amounts in all
vertebrate tissues plays an essential role in the differentiation and survival of several nerve cell populations in the peripheral
and central nervous system The discovery of the NGF was defined by the Nobel Foundation as a milestone in developmental
neurobiology and the author was awarded in 1986 with this prestigious award Studies pursued in subsequent years and still
in progress have unveiled other fundamental properties of the NGF described in the third part of this volume
