Coxeter Graphs And Towers Of Algebras:

Coxeter Graphs and Towers of Algebras Frederick M. Goodman, Pierre de la Harpe, Vaughan F.R. Jones, 2012-12-06 A recent paper on subfactors of von Neumann factors has stimulated much research in von Neumann algebras. It was discovered soon after the appearance of this paper that certain algebras which are used there for the analysis of subfactors could also be used to define a new polynomial invariant for links. Recent efforts to understand the fundamental nature of the new link invariants has led to connections with invariant theory, statistical mechanics and quantum theory. In turn the link invariants, the notion of a quantum group and the quantum Yang-Baxter equation have had a great impact on the study of subfactors. Our subject is certain algebraic and von Neumann algebraic topics closely related to the original paper. However in order to promote in a modest way the contact between diverse fields of mathematics we have tried to make this work accessible to the broadest audience. Consequently this book contains much elementary expository material.

Trends in Representation Theory of Algebras and Related Topics Andrzej Skowroński, 2008 This book is concerned with recent trends in the representation theory of algebras and its exciting interaction with geometry, topology, commutative algebra, Lie algebras, quantum groups, homological algebra, invariant theory, combinatorics, model theory and theoretical physics. The collection of articles written by leading researchers in the field is conceived as a sort of handbook providing easy access to the present state of knowledge and stimulating further development. The topics under discussion include diagram algebras, Brauer algebras, cellular algebras, quasi-hereditary algebras, Hall algebras, Hecke algebras, symplectic reflection algebras, Cherednik algebras, Kashiwara crystals, Fock spaces, preprojective algebras, cluster algebras, rank varieties, varieties of algebras and modules, moduli of representations of quivers, semi-invariants of quivers, Cohen-Macaulay modules, singularities, coherent sheaves, derived categories, spectral representation theory, Coxeter polynomials, Auslander-Reiten theory, Calabi-Yau triangulated categories, Poincaré duality spaces, selfinjective algebras, periodic algebras, stable module categories, Hochschild cohomologies, deformations of algebras, Galois coverings of algebras, tilting theory, algebras of small homological dimensions, representation types of algebras and model theory. This book consists of fifteen self-contained expository survey articles and is addressed to researchers and graduate students in algebra as well as a broader mathematical community. They contain a large number of open problems and give new perspectives for research in the field.

Locally Compact Quantum Groups and Groupoids Leonid Vainerman, 2008-08-22 The book contains seven refereed research papers on locally compact quantum groups and groupoids by leading experts in the respective fields. These contributions are based on talks presented on the occasion of the meeting between mathematicians and theoretical physicists held in Strasbourg from February 21 to February 23, 2002. Topics covered are various constructions of locally compact quantum groups and their multiplicative unitaries, duality theory for locally compact quantum groups, combinatorial quantization of flat connections associated with SL(2, C) quantum groupoids especially coming from Depth 2 Extensions of von Neumann algebras, C*-algebras and Rings. Many

mathematical results are motivated by problems in theoretical physics Historical remarks set the results presented in perspective Directed at research mathematicians and theoretical physicists as well as graduate students the volume will give an overview of a field of research in which great progress has been achieved in the last few years with new ties to many other areas of mathematics and physics Orthogonal Decompositions and Integral Lattices Alexei Kostrikin, Pham Huu Tiep, 2011-06-01

The aim of the series is to present new and important developments in pure and applied mathematics Well established in the community over two decades it offers a large library of mathematics including several important classics The volumes supply thorough and detailed expositions of the methods and ideas essential to the topics in question In addition they convey their relationships to other parts of mathematics The series is addressed to advanced readers wishing to thoroughly study the topic Editorial Board Lev Birbrair Universidade Federal do Cear Fortaleza Brasil Victor P Maslov Russian Academy of Sciences Moscow Russia Walter D Neumann Columbia University New York USA Markus J Pflaum University of Colorado Boulder USA Dierk Schleicher Jacobs University Bremen Germany

Representation Theory of the Symmetric Groups Tullio Ceccherini-Silberstein, Fabio Scarabotti, Filippo Tolli, 2010-02-04 The representation theory of the symmetric groups is a classical topic that since the pioneering work of Frobenius Schur and Young has grown into a huge body of theory with many important connections to other areas of mathematics and physics This self contained book provides a detailed introduction to the subject covering classical topics such as the Littlewood Richardson rule and the Schur Weyl duality Importantly the authors also present many recent advances in the area including Lassalle's character formulas the theory of partition algebras and an exhaustive exposition of the approach developed by A M Vershik and A Okounkov A wealth of examples and exercises makes this an ideal textbook for graduate students It will also serve as a useful reference for more experienced researchers across a range of areas including algebra computer science statistical mechanics and theoretical physics **Noncommutative Stationary Processes** Rolf Gohm, 2004 New Trends in Algebraic Geometry

Klaus Hulek, 1999-05-13 This book is the outcome of the 1996 Warwick Algebraic Geometry EuroConference containing 17 survey and research articles selected from the most outstanding contemporary research topics in algebraic geometry Several of the articles are expository among these a beautiful short exposition by Paranjape of the new and very simple approach to the resolution of singularities a detailed essay by Ito and Nakamura on the ubiquitous A D E classification centred around simple surface singularities a discussion by Morrison of the new special Lagrangian approach to giving geometric foundations to mirror symmetry and two deep informative surveys by Siebert and Behrend on Gromov Witten invariants treating them from the point of view of algebraic and symplectic geometry The remaining articles cover a wide cross section of the most significant research topics in algebraic geometry This includes Gromov Witten invariants Hodge theory Calabi Yau 3 folds mirror symmetry and classification of varieties **Group Theory From A Geometrical Viewpoint** Alberto

Verjovski, Etienne Ghys, Andre Haefliger, 1991-08-12 This proceedings presents the latest research materials done on group

The Legacy of Niels Henrik Abel Olav Arnfinn Laudal, Ragni Piene, 2011-06-28 This book contains a series of research papers on subjects related to the work of Niels Henrik Abel written by some of the foremost specialists in their fields Some of the authors have been specifically invited to present papers discussing the influence of Abel in a mathematical historical context Others have submitted papers presented at the Abel Bicentennial Conference Oslo June 3-8 2002 The idea behind the book has been to produce a text covering a substantial part of the legacy of Abel as perceived at the beginning of the 21st century It is accompanied by a CD ROM with a large amount of information related to Niels Henrik Abel such as on the Abel Centennial in 1902 and the Abel Bicentennial Conference in 2002 the launching of the Abel Prize Abel monuments and stamps banknotes coins etc issued in honour of Niels Henrik Abel

Quantum Groups, Quantum Categories and Quantum Field Theory Jürg Fröhlich, Thomas Kerler, 2006-11-15 This book reviews recent results on low dimensional quantum field theories and their connection with quantum group theory and the theory of braided balanced tensor categories It presents detailed mathematically precise introductions to these subjects and then continues with new results Among the main results are a detailed analysis of the representation theory of $U(\mathfrak{sl}_q)$ for q a primitive root of unity and a semi simple quotient thereof a classification of braided tensor categories generated by an object of q dimension less than two and an application of these results to the theory of sectors in algebraic quantum field theory This clarifies the notion of quantized symmetries in quantum field theory The reader is expected to be familiar with basic notions and results in algebra The book is intended for research mathematicians mathematical physicists and graduate students

Advances in Quantum Dynamics Geoffrey L. Price, 2003 This volume contains the proceedings of the conference on Advances in Quantum Dynamics The purpose of the conference was to assess the current state of knowledge and to outline future research directions of quantum dynamical semigroups on von Neumann algebras Since the appearance of the landmark papers by F Murray and J von Neumann On the Rings of Operators von Neumann algebras have been used as a mathematical model in the study of time evolution of quantum mechanical systems Following the work of M H Stone von Neumann and others on the structure of one parameter groups of unitary transformations many researchers have made fundamental contributions to the understanding of time reversible dynamical systems This book deals with the mathematics of time irreversible systems also called dissipative systems The time parameter is the half line and the transformations are now endomorphisms as opposed to automorphisms For over a decade W B Arveson and R T Powers have pioneered the effort to understand the structure of irreversible quantum dynamical systems on von Neumann algebras Their papers in this volume serve as an excellent introduction to the theory Also included are contributions in other areas which have had an impact on the theory such as Brownian motion dilation theory quantum probability and free probability The volume is suitable for graduate students and research mathematicians interested in the dynamics of quantum systems and corresponding topics
