Effects of Aging on Skeletal Muscle Dallin Tavoian , Craig Willis, 2025-09-12 Maintaining mobility and independence is a major

priority for older adults and one that requires a threshold level of skeletal muscle function. However, skeletal muscle undergoes several morphological, structural, and functional changes that impair its force-producing capacity. With the number and proportion of older adults projected to drastically increase over the next several decades, a greater understanding of the muscular adaptations to aging and potential therapies to reverse or delay muscular aging is warranted. The aim of this Research Topic is to identify and disseminate novel, high-quality investigative findings regarding the effects of aging on skeletal muscle. We also aim to update and summarize current knowledge of age-related changes in skeletal muscle, including how and why older adults respond differently to various interventions relative to young adults. Submissions that examine inter-individual variability within the older adult population are of particular interest.

Exploration of the Human Brain using Magnetic Resonance Imaging and Spectroscopy with Transcranial Direct Current Stimulation Chang-Hoon Choi,Jon Shah,Ferdinand Binkofski,2025-01-02 A large body of molecular and neurophysiological evidence attaches synaptic plasticity and connectivity to specific functions and energy metabolism in particular areas of the brain A favourable approach to investigating various brain functions in humans that enables a well defined modulation of neuronal excitability and energy is to stimulate the brain using a dedicated transcranial direct current stimulation tDCS protocol and then to observe the effect on neurometabolites and brain functioning using magnetic resonance spectroscopy and magnetic resonance imaging tDCS is a non invasive technique for brain stimulation that modulates the level of cortical excitability hyper or hypo polarisation of the membranes to investigate the biochemical and physiological roles of the brain The technique is also utilised for clinical and therapeutic purposes such as depression chronic pain epilepsy stroke induced aphasia or Parkinson s motor symptoms and can also be used to boost ongoing activities including accelerated learning focus memorisation or relaxation

Cerebrovascular Bibliography ,1969 Frontiers in Skeletal Muscle Wasting, Regeneration and Stem Cells Carlos Hermano J. Pinheiro,Lucas Guimarães-Ferreira,2016-05-25 The search for knowledge on cellular and molecular mechanisms involved in skeletal muscle mass homeostasis and regeneration is an exciting scientific area and extremely important to develop therapeutic strategies for neuromuscular disorders and conditions related to muscle wasting The mechanisms involved in the regulation of skeletal muscle mass and regeneration consist of molecular signaling pathways modulating protein synthesis and degradation bioenergetics alterations and preserved function of muscle stem cells In the last years different kinds of stem cells has been reported to be localized into skeletal muscle satellite cells mesoangioblasts progenitor interstitial cells and others or migrate from non muscle sites such as bone marrow to muscle tissue in response to injury In addition myogenic progenitor cells are also activated in skeletal muscle wasting disorders The goal of this research topic is to highlight the
