Applied Predictive Control:

Applied Predictive Control Sunan Huang, Tong Heng Lee, 2013-03-09 The series Advances in Industrial Control aims to report and encourage technology transfer in control engineering The rapid development of control technology has an impact on all areas of the control discipline New theory new controllers actuators sensors new industrial processes computer methods new applications new philosophies new challenges Much of this development work resides in industrial reports feasibility study papers and the reports of advanced collaborative projects. The series offers an opportunity for researchers to present an extended exposition of such new work in all aspects of industrial control for wider and rapid dissemination The Advances in Industrial Control series promotes control techniques which are used by industry The series has useful volumes in various aspects of proportional integral derivative PID control because of the widespread use of PID in applications Predictive control is another technique that quickly became essential in some sectors of the petro chemical and process control industries It was the ability of the method to incorporate operational constraints that lead to this take up by industry The wider industrial applications of predictive control has been slower to develop indeed some practitioners might argue that this technology transfer step is still active or had only just begun in some industrial sectors Fuzzy Logic, Identification and Predictive Control Jairo Jose Espinosa Oviedo, Joos P.L. Vandewalle, Vincent Wertz, 2007-01-04 Modern industrial processes and systems require adaptable advanced control protocols able to deal with circumstances demanding judgement rather than simple yes no on off responses circumstances where a linguistic description is often more relevant than a cut and dried numerical one The ability of fuzzy systems to handle numeric and linguistic information within a single framework renders them efficacious for this purpose Fuzzy Logic Identification and Predictive Control first shows you how to construct static and dynamic fuzzy models using the numerical data from a variety of real industrial systems and simulations The second part exploits such models to design control systems employing techniques like data mining This monograph presents a combination of fuzzy control theory and industrial serviceability that will make a telling contribution to your research whether in the academic or industrial sphere and also serves as a fine roundup of the fuzzy control area for the graduate Model Predictive Vibration Control Gergely Takács, Boris Rohal'-Ilkiv, 2012-03-05 Real time model predictive student controller MPC implementation in active vibration control AVC is often rendered difficult by fast sampling speeds and extensive actuator deformation asymmetry If the control of lightly damped mechanical structures is assumed the region of attraction containing the set of allowable initial conditions requires a large prediction horizon making the already computationally demanding on line process even more complex Model Predictive Vibration Control provides insight into the predictive control of lightly damped vibrating structures by exploring computationally efficient algorithms which are capable of low frequency vibration control with guaranteed stability and constraint feasibility In addition to a theoretical primer on active vibration damping and model predictive control Model Predictive Vibration Control provides a guide through the

necessary steps in understanding the founding ideas of predictive control applied in AVC such as the implementation of computationally efficient algorithms control strategies in simulation and experiment and typical hardware requirements for piezoceramics actuated smart structures The use of a simple laboratory model and inclusion of over 170 illustrations provides readers with clear and methodical explanations making Model Predictive Vibration Control the ideal support material for graduates researchers and industrial practitioners with an interest in efficient predictive control to be utilized in active vibration attenuation **Predictive Control in Process Engineering Robert Haber, Ruth Bars, Ulrich** Schmitz, 2012-09-19 Describing the principles and applications of single input single output and multivariable predictive control in a simple and lively manner this practical book discusses topics such as the handling of on off control nonlinearities and numerical problems It gives guidelines and methods for reducing the computational demand for real time applications With its many examples and several case studies inclinjection molding machine and waste water treatment and industrial applications stripping column distillation column furnace this is invaluable reading for students and engineers who would wish to understand and apply predictive control in a wide variety of process engineering application areas **Predictive Control** Yugeng Xi, Dewei Li, 2019-11-12 This book is a comprehensive introduction to model predictive control MPC including its basic principles and algorithms system analysis and design methods strategy developments and practical applications. Modelling and Controlling Hydropower Plants German Ardul Munoz-Hernandez, Sa'ad Petrous Mansoor, Dewi Ieuan Jones, 2012-06-13 Hydroelectric power stations are a major source of electricity around the world understanding their dynamics is crucial to achieving good performance. The electrical power generated is normally controlled by individual feedback loops on each unit The reference input to the power loop is the grid frequency deviation from its set point thus structuring an external frequency control loop The book discusses practical and well documented cases of modelling and controlling hydropower stations focused on a pumped storage scheme based in Dinorwig North Wales These accounts are valuable to specialist control engineers who are working in this industry. In addition the theoretical treatment of modern and classic controllers will be useful for graduate and final year undergraduate engineering students This book reviews SISO and MIMO models which cover the linear and nonlinear characteristics of pumped storage hydroelectric power stations. The most important dynamic features are discussed The verification of these models by hardware in the loop simulation is described To show how the performance of a pumped storage hydroelectric power station can be improved classical and modern controllers are applied to simulated models of Dinorwig power plant that include PID Fuzzy approximation Feed Forward and Model Based Predictive Control with linear and hybrid prediction models Intelligent Systems in Cybernetics and Automation Theory Radek Silhavy, Roman Senkerik, Zuzana Kominkova Oplatkova, Zdenka Prokopova, Petr Silhavy, 2015-04-24 This volume is based on the research papers presented in the 4th Computer Science On line Conference The volume Intelligent Systems in Cybernetics and Automation Control Theory presents new approaches and methods to real world problems and in particular exploratory research that describes novel approaches in the field of cybernetics and automation control theory Particular emphasis is laid on modern trends in selected fields of interest New algorithms or methods in a variety of fields are also presented The Computer Science On line Conference CSOC2015 is intended to provide an international forum for discussions on the latest high quality research results in all areas related to Computer Science The addressed topics are the theoretical aspects and applications of Computer Science Artificial Intelligences Cybernetics Automation Control Theory and Software Engineering
