**Applied Principles of Hydrology** John C. Manning, 2016-11-03 Less than 1% of the Earth's water is available for human use the average family uses 400 gallons of water daily and expected population growth means an increase in water use The study of hydrology how water behaves as it moves through the water cycle is vital to reducing strains on our water supply and infrastructure Written for those who want to understand hydrologic principles without a background in mathematics Manning's basic water science text begins with the physical and chemical attributes that make water a unique substance and proceeds with a step by step discussion of the water cycle Scientific principles are illustrated by real world examples while investigations sections offer practical suggestions for making measurements and or interpretations of hydrological variables in the local environment and for applying principles discussed in the text This well structured reader friendly text benefits not only students in elementary hydrology courses but also those studying broader areas of natural resources ecology geography and urban planning

*Applied Principles of Hydrology* John Craige Manning, 1997 A complete non mathematical exposition of the universal water cycle in language accessible to non specialists The text begins with a discussion of the physical and chemical attributes that make water unique and goes on to discuss various aspects of the Applied Principles of Hydrology Manning, 2007-02-01

**Watershed Hydrology, Second Edition** Peter E. Black, 1996-05-01 An comprehensive working reference Watershed Hydrology begins with an overview of the hydrologic cycle and examines the basic concepts of storage in that cycle The well organized chapters cover topics such as water and energy storage of water in the atmosphere water in the vegetative zone water in the terrasphere soil water in the hydrosphere and watershed management

**Hydrology** Ian Watson, 2017-11-13 Hydrology covers the fundamentals of hydrology and hydrogeology taking an environmental slant dictated by the emphasis in recent times for the remediation of contaminated aquifers and surface water bodies as well as a demand for new designs that impose the least negative impact on the natural environment Major topics covered include hydrological principles groundwater flow groundwater contamination and clean up groundwater applications to civil engineering well hydraulics and surface water Additional topics addressed include flood analysis flood control and both ground water and surface water applications to civil engineering design

**Hydrology and Water Resource Systems Analysis** Maria A. Mimikou, Evangelos A. Baltas, Vassilios A. Tsihrintzis, 2016-12-01 Hydrology and water resources analysis can be looked at together but this is the only book which presents the relevant material and which bridges the gap between scientific processes and applications in one text New methods and programs for solving hydrological problems are outlined in a concise and readily accessible form Hydrology and Water Resource Systems Analysis includes a number of illustrations and tables with fully solved example problems integrated within the text It describes a systematic treatment of various surface water estimation techniques and provides detailed treatment of theory and applications of groundwater flow for both steady state and unsteady state conditions time series analysis and hydrological

simulation floodplain management reservoir and stream flow routing sedimentation and erosion hydraulics urban hydrology the hydrological design of basic hydraulic structures storage spillways and energy dissipation for flood control optimization techniques for water management projects and methods for uncertainty analysis It is written for advanced undergraduate and graduate students and for practitioners Hydrologists and water related professionals will be helped with an unfamiliar term or a new subject area or be given a formula the procedure for solving a problem or guidance on the computer packages which are available or shown how to obtain values from a table of data For them it is a compendium of hydrological practice rather than science but sufficient scientific background is provided to enable them to understand the hydrological processes in a given problem and to appreciate the limitations of the methods presented for solving it *Environmental Hydrology, Second Edition* Andy D. Ward, Stanley W. Trimble, 2003-12-18 The technological advances of recent years include the emergence of new remote sensing and geographic information systems that are invaluable for the study of wetlands agricultural land and land use change Students hydrologists and environmental engineers are searching for a comprehensive hydrogeologic overview that supplements information on hydrologic processes with data on these new information technology tools *Environmental Hydrology Second Edition* builds upon the foundation of the bestselling first edition by providing a qualitative understanding of hydrologic processes while introducing new methods for quantifying hydrologic parameters and processes Written by authors with extensive multidisciplinary experience the text first discusses the components of the hydrologic cycle then follows with chapters on precipitation stream processes human impacts new information system applications and numerous other methods and strategies By updating this thorough text with the newest analytical tools and measurement methodologies in the field the authors provide an ideal reference for students and professionals in environmental science hydrology soil science geology ecological engineering and countless other environmental fields **Methods of Environmental Impact Assessment** Peter Morris, Riki Therivel, 2001-08-23 Offers a comprehensive coverage of the methods used in environmental impact assessment which is now firmly established as an obligatory procedure in proposing or launching any development project with possible impacts on the environment

**Fundamentals of Fluvial Geomorphology** Ro Charlton, 2007-11-12 *Fundamentals of Fluvial Geomorphology* will be an indispensable introductory text for first and second year undergraduates providing a clear understanding of how the fluvial system operates at different spatial and temporal scales *Environmental Hydrology* Andy D. Ward, Stanley W. Trimble, Suzette R. Burckhard, John G. Lyon, 2015-09-17 The late Professor Red's Wolman in his Foreword to the award winning second edition said This is not your ordinary textbook *Environmental Hydrology* is indeed a textbook but five elements often found separately combine here in one text to make it different It is eclectic practical in places a handbook a guide to fieldwork engagingly personal **Watersheds, Groundwater and Drinking Water** Thomas Harter, Larry Rollins, 2008 This guide will help resource managers planners and other decision makers better understand and assess water

supplies and to define and manage protection areas for water sources Developed for those who are interested in water resources it can easily be used as text material for educational short courses

**Upstream/downstream** Donald Scherer,1990 Contains essays that explore non reciprocated relationships with regard to the environment This work includes contributions that discuss moral issues that arise when decisions by individuals corporations or governments cause changes in the environment that affect those who do not participate in the decisions

*California Rivers and Streams* Jeffrey F. Mount, 2023-09-01 California Rivers and Streams provides a clear and informative overview of the physical and biological processes that shape California's rivers and watersheds Jeffrey Mount introduces relevant basic principles of hydrology and geomorphology and applies them to an understanding of the differences in character of the state's many rivers He then builds on this foundation by evaluating the impact on waterways of different land use practices logging mining agriculture flood control urbanization and water supply development Water may be one of California's most valuable resources but it is far from being one we control In spite of channels levees lines and dams the state's rivers still frequently flood with devastating results Almost all the rivers in California are dammed or diverted with the booming population there will be pressure for more intervention Mount argues that Californians know little about how their rivers work and more importantly how and why land use practices impact rivers The forceful reconfiguration and redistribution of the rivers has already brought the state to a critical crossroads California Rivers and Streams forces us to reevaluate our use of the state's rivers and offers a foundation for participating in the heated

debates about their future California Rivers and Streams provides a clear and informative overview of the physical and biological processes that shape California's rivers and watersheds Jeffrey Mount introduces relevant basic principles of hydrology and geomorphology and a Methods of Environmental Impact Assessment, *Groundwater Science* Charles R. **Recent Advances in the Modeling of Hydrologic Systems** D.S Bowles, P. Enda O'Connell, 2012-12-06 Modeling of the rainfall runoff process is of both scientific and practical significance Many of the currently used mathematical models of hydrologic systems were developed a generation ago Much of the effort since then has focused on refining these models rather than on developing new models based on improved scientific understanding In the past few years however a renewed effort has been made to improve both our fundamental understanding of hydrologic processes and to exploit technological advances in computing and remote sensing It is against this background that the NATO Advanced Study Institute on Recent Advances in the Modeling of Hydrologic Systems was organized The idea for holding a NATO ASI on this topic grew out of an informal discussion between one of the co-directors and Professor Francisco Nunes Correia at a previous NATO ASI held at Tucson Arizona in 1985 The Special Program Panel on Global Transport Mechanisms in the Geo Sciences of the NATO Scientific Affairs Division agreed to sponsor the ASI and an organizing committee was formed The committee comprised the co-directors Professor David S Bowles U S A and Professor P Enda O Connell U K and Professor Francisco Nunes Correia Portugal Dr Donn G DeCoursey U S A and Professor Ezio Todini Italy
