A First Course in Bayesian Statistical Methods Peter D. Hoff, 2009-06-02 A self contained introduction to probability exchangeability and Bayes rule provides a theoretical understanding of the applied material Numerous examples with R code that can be run as is allow the reader to perform the data analyses themselves The development of Monte Carlo and Markov chain Monte Carlo methods in the context of data analysis examples provides motivation for these computational methods

Introduction to Bayesian Econometrics Edward Greenberg, 2013 This textbook explains the basic ideas of subjective probability and shows how subjective probabilities must obey the usual rules of probability to ensure coherency It defines the likelihood function prior distributions and posterior distributions It explains how posterior distributions are the basis for inference and explores their basic properties Various methods of specifying prior distributions are considered with special emphasis on subject matter considerations and exchange ability The regression model is examined to show how analytical methods may fail in the derivation of marginal posterior distributions The remainder of the book is concerned with applications of the theory to important models that are used in economics political science biostatistics and other applied fields New to the second edition is a chapter on semiparametric regression and new sections on the ordinal probit item response factor analysis ARCH GARCH and stochastic volatility models The new edition also emphasizes the R programming language

Decision Analysis for the Manager Rex V. Brown, Andrew S. Kahr, Cameron Peterson, 1974 Abstract As a discipline for systematic evaluation of alternative actions used as a basis of choice decision analysis uses the tools that provide methodology for analyzing and dealing systematically with decision situations in management Prescriptive elementary models are a means of improving decision making skills on practical topics Case studies and follow up assignments in the text reinforce theoretical discussions Topic areas include 1 introductory concepts and current applications 2 developing decision modeling skills 3 analytical strategy for real world decisions 4 direct and indirect probability assessment techniques and 5 relating decision making technology to the organizational context

Decision Analysis Rex V. Brown, Andrew S. Kahr, Cameron Peterson, 1974 The ore case structure probability and expected value The ore case information and probability assessment The ore case time criteria and utility Decision tree exercises Decision tree caselet Decision analysis in use A case study in the application of decision analysis

A New Method of Subgrouping in the Crossover Clinical Trial Using Simulation Techniques for Performance Evaluation Heather Renée Crosby, 2002

Internet Data Collection Samuel J. Best, Brian S. Krueger, 2004-04-29 The Internet has emerged as a popular medium for collecting data because of its ability to access millions of users facilitate an array of research designs efficiently deliver compile questionnaires This volume offers advice on how to utilize the power of the Internet efficiently

Typologies and Taxonomies Kenneth D. Bailey, 1994-06-13 How do we group different subjects on a variety of variables Should we use a classification procedure in which only the concepts are classified typology one in which only empirical entities are classified

taxonomy or some combination of both In this clearly written book Bailey addresses these questions and shows how classification methods can be used to improve research Beginning with an exploration of the advantages and disadvantages of classification procedures including those typologies that can be constructed without the use of a computer the book covers such topics as clustering procedures including agglomerative and divisive methods the relationship among various classification techniques including the relationship of monothetic qualitative typologies to polythetic quantitative taxonomies a comparison of clustering methods and how these methods compare with related statistical techniques such as factor analysis multidimensional scaling and systems analysis and lists classification resources This volume also discusses software packages for use in clustering techniques

Multilevel Modeling Douglas A. Luke, 2004-07-08 Taking a practical hands on approach to multilevel modeling this book provides readers with an accessible and concise introduction to HLM and how to use the technique to build models for hierarchical and longitudinal data Each section of the book answers a basic question about multilevel modeling such as How do you determine how well the model fits the data After reading this book readers will understand research design issues associated with multilevel models be able to accurately interpret the results of multilevel analyses and build simple cross sectional and longitudinal multilevel models

Interpreting and Using Regression Christopher H. Achen, 1982-10 Interpreting and Using Regression sets out the actual procedures researchers employ places them in the framework of statistical theory and shows how good research takes account both of statistical theory and real world demands Achen builds a working philosophy of regression that goes well beyond the abstract unrealistic treatment given in previous texts

LISREL Approaches to Interaction Effects in Multiple Regression James Jaccard, Choi K Wan, 1996-03-21 With detailed examples this book demonstrates the use of the computer program LISREL and how it can be applied to the analysis of interactions in regression frameworks The authors consider a wide range of applications including qualitative moderator variables longitudinal designs and product term analysis They describe different types of measurement error and then present a discussion of latent variable representations of measurement error which serves as the foundation for the analyses described in later chapters Finally they offer a brief introduction to LISREL and show how it can be used to execute the analyses Readers can use this book without any prior training in LISREL and will find it an excellent introduction to analytic methods that deal with the problem of measurement error in the analysis of interactions

Discriminant Analysis William R. Klecka, 1980-08 Background Deriving the canonical discriminant functions Interpreting the canonical discriminant functions Classification procedures Stepwise inclusion of variables Concluding remarks

Principal Components Analysis George H. Duntzman, 1989-05 For anyone in need of a concise introductory guide to principal components analysis this book is a must Through an effective use of simple mathematical geometrical and multiple real life examples such as crime statistics indicators of drug abuse and educational expenditures and by minimizing the use of matrix algebra the reader can quickly master and put this technique to immediate use

Multidimensional Scaling Joseph B. Kruskal, Myron Wish, 1978 Basic concepts of multidimensional scaling Interpretation of the configuration Dimensionality Three way multidimensional scaling Preparing the input for multidimensional scaling

Q Methodology Bruce McKeown, Dan B. Thomas, 2013-06-11 Direct well organized and easy to follow Q Methodology Second Edition by Bruce McKeown and Dan B Thomas reviews the philosophical foundations of subjective communicability concurrence theory operant subjectivity and quantum theoretical aspects of Q as relevant to the social and behavioral sciences The authors discuss data gathering techniques communication concourses Q samples and Q sorting statistical techniques correlation and factor analysis and the important calculation of factor scores and strategies for conducting small person sample research along Q methodological lines

Experimental Design and Analysis Steven R. Brown, Lawrence E. Melamed, 1990 Brown and Melamed's book is one of the best concise treatments of the design and analysis of experiments that I have seen The authors begin by showing the significance of variability variance for the analysis of experiments and clearly illustrate the utility of the analysis of variance ANOVA model to the analysis of experimental data They also provide a clear discussion of more advanced topics such as nested factorial split plot and repeated measures designs Their book is comprehensive handles each topic deftly and should be readily accessible to researchers with a good grounding in basic statistics

Contemporary Sociology The book is well written and includes useful examples Useful to researchers in both the planning and analysis phases of an experimental study

ANNA Journal Introductory well written and has illustrative examples Highly recommended for introductory courses and self study the book can be supplemented easily with a treatment of covariates from other available study materials

Journal of Marketing Research This volume introduces the reader to one of the most fundamental topics in social science statistics experimental design The authors clearly show how to select an experimental design based on the number of independent variables the sources and number of extraneous variables and the number of subjects Other topics addressed include variability hypothesis testing how ANOVA can be extended to the multi group situation the logic of the t test and completely randomized designs

Game Theory Frank C. Zagare, 1984-07 This volume demonstrates the applicability of game theoretic models and explores zero sum games the fundamental Minimax Theory nonzero sum games and n person games

Linear Probability, Logit, and Probit Models John H. Aldrich, Forrest D. Nelson, 1984-11 After showing why ordinary regression analysis is not appropriate for investigating dichotomous or otherwise limited dependent variables this volume examines three techniques which are well suited for such data It reviews the linear probability model and discusses alternative specifications of non linear models
