McCloskey, 1982 Zinzi has a talent for finding lost things Being hired by famously reclusive music producer Odi Huron to find a teenybop pop star should be her ticket out of Zoo City the festering slum of the criminal underclass Set in a wildly re imagined Johannesburg it mixes refugees crime the music industry African magic and the nature of sin      *Price Theory and Applications* Jack Hirshleifer, Amihai Glazer, David Hirshleifer, 2005-09-12 This seventh edition of the book offers extensive discussion of information uncertainty and game theory      **Nonstandard House Price Theory** Marko Hannonen, This is an e book about a dynamic field theory of house prices which simplifies the ideas in the author s previous work A Field Theory of House Prices ISBN 978 952 6613 36 9 The text provides new highly workable ideas based on the major ideas of classical physics combined with the major ideas of classical economics This synthesis is known as a dynamic field theory of house prices This is a novel theory that provides a unified general framework for decision making that can be applied to any macro level question about house prices In order to understand the ideas of this e book it is assumed that the reader has a basic understanding of mathematics which is the language of exact science The workability of the ideas presented in this e book are demonstrated using some real large data sets These empirical results are documented in the presented material The local disposable income and the interest variable typically applied in Finland are the pushing forces that generate the demand field The supply side is the attracting force that does not influence the house prices in the samples investigated but is still a force that exists What is a house price What are the demand field and supply field of housing This book explains these issues      **Dynamic Asset Pricing Theory** Darrell Duffie, 2010-01-27 This is a thoroughly updated edition of Dynamic Asset Pricing Theory the standard text for doctoral students and researchers on the theory of asset pricing and portfolio selection in multiperiod settings under uncertainty The asset pricing results are based on the three increasingly restrictive assumptions absence of arbitrage single agent optimality and equilibrium These results are unified with two key concepts state prices and martingales Technicalities are given relatively little emphasis so as to draw connections between these concepts and to make plain the similarities between discrete and continuous time models Readers will be particularly intrigued by this latest edition s most significant new feature a chapter on corporate securities that offers alternative approaches to the valuation of corporate debt Also while much of the continuous time portion of the theory is based on Brownian motion this third edition introduces jumps for example those associated with Poisson arrivals in order to accommodate surprise events such as bond defaults Applications include term structure models derivative valuation and hedging methods Numerical methods covered include Monte Carlo simulation and finite difference solutions for partial differential equations Each chapter provides extensive problem exercises and notes to the literature A system of appendixes reviews the necessary mathematical concepts And references have been

updated throughout With this new edition Dynamic Asset Pricing Theory remains at the head of the field      Basic Theories of Intellectual Property Transaction Ming Yang,2025-07-12 From the perspective of the market this book discusses the basic theories and operation mechanism of intellectual property transactions based on the behavior choice theory aiming to deeply understand how the specific systems and rules of intellectual property are operated or applied beyond the external form of system application China s long standing intellectual property legal doctrines and the corresponding knowledge system whether legislative judicial or theoretical research deserve reflection in three aspects i the neglect of market principles ii the lack of behaviorism research perspectives and methods and iii the lack of systematic degree of existing research This book is an introspection on the basic theoretical research of intellectual property in China from the above three aspects This book closely focuses on the coupling relationship between system implementation and behavior choice along with the logical context of intellectual property transactions the institutional mechanism behind the specific transaction forms is investigated and its benefits are analyzed And the essence of the economic mechanism of the intellectual property system is deeply interpreted from both theoretical and practical aspects The target audience is intellectual property law researcher and the content level is the theoretical foundation research Starting from the principles of the entitlement of intellectual property this book tries to reveal the institutional implication of the creation of right the boundary of right and the attribute of right And this book also tries to sort out the matching attribute between the existing intellectual property systems and the operation of the intellectual property market Finally by analyzing the correlation between the market environment and the subject s behavior choice this book tries to clarify the internal logic between system market and behavior These aforesaid features will help IP researchers deeply understand how existing legal systems and rules affect specific intellectual property transactions      **Price Theory and Its Applications** Bernard Saffran,Frederic M.
