Progress in Corrosion Research Emilio L. Bettini, 2007 This book presents corrosion research studies from around the world Most structural alloys corrode merely from exposure to moisture in the air but the process can be strongly affected by exposure to certain substances Corrosion can be concentrated locally to form a pit or crack or it can extend across a wide area to produce general deterioration While some efforts to reduce corrosion merely redirect the damage into less visible less predictable forms controlled corrosion treatments such as passivation and chromate conversion will increase a material's corrosion resistance
