Appraisal And Beyond The Issue Of Cognitive Determinants Of Emotion:

Appraisal and Beyond Nico H. Frijda, 1993 Appraisal is a central notion in current theory A process of appraisal can be considered the key to understanding that emotions differ for different individuals Assuming a process of appraisal that mediates between events and emotions is the clue to understanding that a particular event evokes an emotion in one individual and not in another or evokes an emotion at one moment and no emotion or a weaker or stronger one at another moment A process of appraisal also explains why an emotionally charged event elicits this particular emotion and not another one in this particular individual under these particular conditions The process of appraisal accounts for the fact that the arousal of an emotion depends upon the meaning of the event for the individual and explains why the emotion that is evoked often depends upon quite subtle aspects of that meaning Arousal of emotions is determined by the interaction between events the individual's conceptions or expectations as to what constitutes well being for him or her and the individual's expectations that he or she will be able to deal or cope with the event and if so in what manner or how effectively To deal with these issues the notion of appraisal was developed in the early 1960s In the early 1980s a torrent of theoretical and empirical work broke loose in which the cognitive variables involved were spelled out in great detail A large number of theoretical and empirical studies from quite diverse laboratories generated a highly cumulative body of research However it also generated disagreements important questions such as those regarding the importance of the place of cognition in emotion and methodological objections Also few accounts were produced of the processes by which appraisal is supposed to operate This Special Issue is one endeavour to take stock of the findings and problems concerning appraisal It is called *Appraisal and Beyond* because it invited and received from leading contributors to the field state of the art reports of appraisal research critical comments and suggestions that should carry the theory further Neuropsychological Perspectives On Emotion Watts, 1994-08 First published in 1994 Routledge is an imprint of Taylor Francis an informal company

Global Perspectives on Media Events in Contemporary Society Fox, Andrew, 2016-02-25 Media events have been described as broadcasts that involve an engaged audience viewing the same event simultaneously though this definition is still relevant the way media outlets interact with and react to their audiences has greatly changed This is in part due to the emergence of social media platforms which allow a participatory audience something that genre specific television channels now rely on Because these genre specific 24 hour channels seek to hook viewers with hyperbolic presentation and the illusion of large media events the original definition must be adapted Global Perspectives on Media Events in Contemporary Society seeks to re define the role of the media in relaying information about current events within a modern context Determining what constitutes as and the proper presentation of a media event is of great importance given the ubiquity of media consumption This book approaches the topic from historical ceremonial and globally cultural perspectives while addressing news sports and other significant current events It is a vital resource for students and teachers of communication media and journalism professionals in the media industry policy makers and sociologists

The Emotions of the Ancient Greeks David Konstan, 2007-12-22 It is generally assumed that whatever else has changed about the human condition since the dawn of civilization basic human emotions love fear anger envy shame have remained constant David Konstan however argues that the emotions of the ancient Greeks were in some significant respects different from our own and that recognizing these differences is important to understanding ancient Greek literature and culture With The Emotions of the Ancient Greeks Konstan reexamines the traditional assumption that the Greek terms designating the emotions correspond more or less to those of today Beneath the similarities there are striking discrepancies References to Greek anger or love or envy for example commonly neglect the fact that the Greeks themselves did not use these terms but rather words in their own language such as org and philia and phthonos which do not translate neatly into our modern emotional vocabulary Konstan argues that classical representations and analyses of the emotions correspond to a world of intense competition for status and focused on the attitudes motives and actions of others rather than on chance or natural events as the elicitors of emotion Konstan makes use of Greek emotional concepts to interpret various works of classical literature including epic drama history and oratory Moreover he

illustrates how the Greeks conception of emotions has something to tell us about our own views whether about the nature of particular emotions or of the category of emotion itself Emotions, Stress, and Health Alex J. Cooper, 2005-01-01 Just as mergers and acquisitions begin to take off once again this book reminds us that the emotional side of business is often at the heart of success and failure With a terrific mix of case studies and in depth conceptual thinking Managing Emotions in Mergers and Acquisitions addresses the most fundamental of all issues in M As how and why people sometimes disrupt the best merger plans simply because they are
