Mathematical Analyses of Decisions, Voting and Games Michael A. Jones, David McCune, Jennifer M. Wilson, 2024-03-25

This volume contains the proceedings of the virtual AMS Special Session on Mathematics of Decisions Elections and Games held on April 8 2022 Decision theory voting theory and game theory are three related areas of mathematics that involve making optimal decisions in different contexts While these three areas are distinct much of the recent research in these fields borrows techniques from other branches of mathematics such as algebra combinatorics convex geometry logic representation theory etc The papers in this volume demonstrate how the mathematics of decisions elections and games can be used to analyze problems from the social sciences

Multi-Winner Voting with Approval Preferences

Martin Lackner, Piotr Skowron, 2022-11-17 From fundamental concepts and results to recent advances in computational social choice this open access book provides a thorough and in depth look at multi winner voting based on approval preferences The main focus is on axiomatic analysis algorithmic results and several applications that are relevant in artificial intelligence computer science and elections of any kind What is the best way to select a set of candidates for a shortlist for an executive committee or for product recommendations Multi winner voting is the process of selecting a fixed size set of candidates based on the preferences expressed by the voters A wide variety of decision processes in settings ranging from politics parliamentary elections to the design of modern computer applications collaborative filtering dynamic Q A platforms diversity in search results etc share the problem of identifying a representative subset of alternatives The study of multi winner voting provides the principled analysis of this task Approval based committee voting rules in short ABC rules are multi winner voting rules particularly suitable for practical use Their usability is founded on the straightforward form in which the voters can express preferences voters simply have to differentiate between approved and disapproved candidates Proposals for ABC rules are numerous some dating back to the late 19th century while others have been introduced only very recently This book explains and discusses these rules highlighting their individual strengths and weaknesses With the help of this book the reader will be able to choose a suitable ABC voting rule in a principled fashion participate in and be up to date with the ongoing research on this topic

Discrete Geometry and Algebraic Combinatorics

Alexander Barg, Oleg R. Musin, 2014-08-28 This volume contains the proceedings of the AMS Special Session on Discrete Geometry and Algebraic Combinatorics held on January 11 2013 in San Diego California The collection of articles in this volume is devoted to packings of metric spaces and related questions and contains new results as well as surveys of some areas of discrete geometry This volume consists of papers on combinatorics of transportation polytopes including results on the diameter of graphs of such polytopes the generalized Steiner problem and related topics of the minimal fillings theory a survey of distance graphs and graphs of diameters and a group of papers on applications of algebraic combinatorics to packings of metric spaces including sphere packings and topics in coding theory In particular this volume presents a new approach to duality in sphere packing based on the Poisson

summation formula applications of semidefinite programming to spherical codes and equiangular lines new results in list decoding of a family of algebraic codes and constructions of bent and semi bent functions United States Code, 2000 Edition, V. 22, Title 42, The Public Health and Welfare, Sections 1400-4000 , United States Code United States,1974
