Sea Surface Salinity Remote Sensing Emmanuel P. Dinnat,Xiaobin Yin,2019-08-27 This Special Issue gathers papers reporting research on various aspects of remote sensing of Sea Surface Salinity SSS and the use of satellite SSS in oceanography It includes contributions presenting improvements in empirical or theoretical radiative transfer models mitigation techniques of external interference such as RFI and land contamination comparisons and validation of remote sensing products with in situ observations retrieval techniques for improved coastal SSS monitoring high latitude SSS and the assessment of ocean interactions with the cryosphere and data fusion techniques combining SSS with sea surface temperature SST New instrument technology for the future of SSS remote sensing is also presented **NASA** Gene L. Dodaro,2010-06 NASA plans to invest billions in the coming years in science and exploration space flight initiatives In the past NASA has had difficulty meeting cost schedule and performance objectives for many of its projects The need to effectively manage projects will gain even more importance as NASA seeks to manage its wide ranging portfolio in an increasingly constrained fiscal environment This report provides an independent assessment of selected NASA projects This report compared projects against best practice criteria for system development including attainment of knowledge on technologies and design The projects assessed are considered major acquisitions by NASA each with a life cycle cost of over 250 million Charts and tables Commerce, Justice, Science, and Related Agencies Appropriations for 2014 United States. Committee on Appropriations,2007 **Earth Science and Applications from Space** National Research Council,Division on Engineering and Physical Sciences,Space Studies Board,Committee on the Assessment of NASA's Earth Science Program,2012-09-03 Understanding the effects of natural and human induced changes on the global environment and their implications requires a foundation of integrated observations of land sea air and space on which to build credible information products forecast models and other tools for making informed decisions The 2007 National Research Council report on decadal survey called for a renewal of the national commitment to a program of Earth observations in which attention to securing practical benefits for humankind plays an equal role with the quest to acquire new knowledge about the Earth system NASA responded favorably and aggressively to this survey embracing its overall recommendations for Earth observations missions technology investments and priorities for the underlying science As a result the science and applications communities have made significant progress over the past 5 years However the Committee on Assessment of NASA s Earth Science Program found that the survey vision is being realized at a far slower pace than was recommended principally because the required budget was not achieved Exacerbating the budget shortfalls NASA Earth science programs experienced launch failures and delays and the cost of implementing missions

increased substantially as a result of changes in mission scope increases in launch vehicle costs and or the lack of availability of a medium class launch vehicle under estimation of costs by the decadal survey and unfunded programmatic changes that were required by Congress and the Office of Management and Budget In addition the National Oceanic and Atmospheric Administration NOAA has made significant reductions in scope to its future Earth environmental observing satellites as it contends with budget shortfalls Earth Science and Applications from Space A Midterm Assessment of NASA s

Implementation of the Decadal Survey recommends a number of steps to better manage existing programs and to implement future programs that will be recommended by the next decadal survey The report also highlights the urgent need for the Executive Branch to develop and implement an overarching multiagency national strategy for Earth observations from space a key recommendation of the 2007 decadal survey that remains unfulfilled **Science, the Departments of State,**
