Geology of Iraq Saad Z. Jassim, Jeremy C. Goff, 2006 This book is written by 16 experienced geologists with first hand knowledge of the geology of Iraq and deals with

all aspects of the country's geology. The aims of the book are to present a synthesis of the geological history of Iraq and a description of its economic geology and to provide a key reference for both students and professional geologists. It updates the text books of Buday 1980 and Buday and Jassim 1987. The book includes previously unpublished information collected during the regional geological surveys of Iraq carried out from 1970 to 1990. Each chapter has been extensively edited to create a concise text. The stratigraphy of Iraq is placed within a consistent tectonostratigraphic framework. Regional Geology and Tectonics: Phanerozoic Passive Margins, Cratonic Basins and Global Tectonic Maps A.W. Bally, 2012-05-31

Expert petroleum geologists David Roberts and Albert Bally bring you *Regional Geology and Tectonics: Phanerozoic Passive Margins, Cratonic Basins and Global Tectonic Maps* volume three in a three volume series covering Phanerozoic regional geology and tectonics. Its key focus is on both volcanic and non-volcanic passive margins and the importance of salt and shale driven by sedimentary tectonics to their evolution. Recent innovative research on such critical locations as Iberia, Newfoundland, China and the North Sea are incorporated to provide practical real world case studies in regional geology and tectonics. The vast amount of volcanic data now available to form accurate hydrocarbon assessments and analysis at passive margin locations is also included into this thorough yet accessible reference. Named a 2013 Outstanding Academic Title by the American Library Association's Choice publication. A how to practical reference that discusses the impact of the development of passive margins and cratonic basins on the structural evolution of the Earth in regional geology and tectonic applications. Incorporates the increased availability of industry data to present regional seismic lines and cross sections leading to more accurate analysis and assessment of targeted hydrocarbon systems. Analyses of passive margins and cratonic basins in East Africa, China, Siberia, the Gulf of Suez and the Laptev Sea in the Russian Arctic provide immediately implementable petroleum exploration applications. Summaries of analogue and theoretical models are provided as an essential backdrop to the structure and stratigraphy of various geological settings. Proceedings of the International Field Exploration and Development Conference 2020 Jia'en Lin, 2021-06-17

Nairn, A.S. Alsharhan, 1997-12-11

The wealth of petroleum has made the Middle East one of the most actively explored regions of the world. The volume of geological, geophysical and geochemical data collected by the petroleum industry in recent decades is enormous. The Middle East may be a unique region in the world where the

volume of subsurface data and information exceeds that based on surface outcrop. This book reviews the tectonic and geological history of the Middle East and the regional hydrocarbon potential on a country by country basis in the context of current ideas developed through seismic and sequence stratigraphy and incorporating the ideas of global sea level change. Subsurface data have been used as much as possible to amplify the descriptions. The paleogeographic approach provides a means to view the area as a whole. While the country by country approach inevitably leads to some repetition, it enhances the value of the volume as a teaching tool and underlines some of the changing lithologies within formations carrying the same name.

The Geology of Kuwait Abd el-aziz Khairy Abd el-aal, Jasem Mohammed Al-Awadhi, Ali Al-Dousari, 2022-11-21. This book is aimed at researchers and students as well as professionals in the field of hazard mitigation and petroleum exploration.

On the Geology of Syria Ahmad Bilal, 2022-10-21. This book serves to contribute to a further understanding of our globe and offers a number of insights into the field of geology through its use of various examples. As it shows the Syrian outcrops present a highly diverse field for geologists with their sedimentary and volcano magmatic rocks and their fluid inclusions, Syria is located at the meeting point of Eurasian, African and Arabic plates and consequently it is underlain by an active global structure, the Dead Sea Fault Zone (DSFZ), also known as the Levant fault, making this area of even further interest for the geologist.

Regional Geology and Tectonics David G. Roberts, A.W. Bally, 2012-12-31. Volume 1A: Principles of Geologic Analysis. A how-to primer describes the basic concepts petroleum geologists and students need to understand hydrocarbon exploration in a broad range of geological settings globally. Volume 1B: Phanerozoic Rift Systems and Sedimentary Basins. Incorporates industry data to present regional seismic lines and cross sections to accurately document and analyze proven hydrocarbon systems. It also includes summaries of analogue and theoretical models as an essential backdrop to the structure and stratigraphy of a variety of geological settings. Volume 1C: Phanerozoic Passive Margins, Cratonic Basins and Global Tectonic Maps. Focuses on both volcanic and non-volcanic passive margins as well as cratonic basins, critical habitats for hydrocarbons. It provides a unique basis for comparison of different passive margins and for an understanding of their structural and stratigraphic evolution as well as their petroleum systems, especially useful to explorationists working in deep water basins and researchers examining the tectonic evolution of the continent-ocean transition. A vast amount of data to enable hydrocarbon play assessments and analysis on passive margins is also included in this thorough yet accessible reference. Individual volumes can also be purchased: 9780444530424, 9780444563569, 9780444563576.
