Arboreal Forivores:

The Ecology of Arboreal Folivores Gerald Gene Montgomery, 1978 *Plant Defenses Against Mammalian Herbivory* R. Thomas Palo, Charles T. Robbins, 1991-08-12 This volume summarizes what is currently known about mammalian herbivore plant interaction particularly as governed by plant secondary chemistry and suggests productive avenues for future research Topics covered include foraging theory and plant chemistry in mammal herbivory the evolution of herbivory in relation to plant defenses factors controlling resource allocation to defenses in plants mechanisms by which herbivorous mammals can counter plant defenses to gain necessary energy and nutrients and herbivory in deserts temperate and tropical forests and boreal forests Wildlife biologists agriculturalists physiologists nutritionists ecologists evolutionary biologists and other researchers interested in mammalian herbivore plant interaction will find a tremendous store of useful information in this unique book

Marsupial Nutrition Ian D. Hume, 1999-05-27 A comprehensive description of the food resources digestive systems and metabolisms of marsupials first published in 1999 **Five New World Primates** John Terborgh, 2014-07-14 Launching a new series Monographs in Behavior and Ecology this work is an intensive study of five species of New World monkeys all omnivores with a diet of fruit and small prey Notwithstanding their common diet they differ widely in group size social system ranging patterns and degree of territoriality Originally published in 1984 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

Primate Socioecology Lynne A. Isbell, 2024-07-02 This work provides an exciting and new understanding of primate social behavior that emerges from a fresh approach to research findings that scientists have long taken for granted **Leaf Defence** Edward E. Farmer, 2014 Leaves are among the most abundant organs on earth and are a defining feature of most terrestrial ecosystems However a leaf is also a potential meal for a hungry animal and the question therefore arises why does so much foliage survive in nature What mechanisms protect leaves so that on a global scale only a relatively small proportion of living leaf material is consumed Leaf survival is in large part due to two processes firstly leaf eating organisms fall prey to predators top down pressure on the herbivore secondly leaves defend themselves bottom up pressure on the herbivore Remarkably these two types of event are often linked they are controlled and coordinated by plants and the molecular mechanisms that underlie this are now beginning to emerge This novel text focuses exclusively on the leaf on the herbivorous organisms that attack leaves and the mechanisms that plants use to defend these vital organs It begins with an assessment of the scale of herbivory before examining direct physical and chemical defences on leaf surfaces and within the leaf itself Although some leaf defences are easily seen most operate at the molecular level and are therefore invisible to the naked eye

Many of these recently elucidated mechanisms are described Throughout the book perspectives from both the laboratory and the field are combined A central feature of the work is its emphasis on the coevolution of leaf defences and the digestive tracts of animals including humans making the book of relevance in understanding the role of leaf defences in agriculture Leaf Defence is suitable for senior undergraduate and graduate students taking courses in plant science as well as a broader audience of biologists and biochemists seeking a comprehensive and authoritative overview of this exciting and emerging topic

The Guenons: Diversity and Adaptation in African Monkeys Mary E. Glenn, Marina Cords, 2006-04-11 It has been twelve years since a work relating to the long tailed African monkeys known as the guenons has been published and fifteen years have passed since the last major scientific symposium was held that was solely dedicated to current research on members of this monkey group living in the wild Since that time new guenon species and subspecies have been discovered previously unstudied guenon species have become the subject of long term research projects and knowledge of the more well known guenon species has greatly increased This volume presents novel information and keen insight on research previously studied and newly discovered A wide range of topics related to guenon biology is presented including evolution taxonomy biogeography reproductive physiology social and positional behavior ecology and conservation Composed of 26 chapters compiled by 47 authors many of whom are young investigators in their field *The Guenons Diversity and Adaptation in African Monkeys* provides a valuable resource for researchers and scientists in the fields of anthropology primatology zoology and conservation biology

The Digestive System in Mammals D. J. Chivers, P. Langer, 1994-07-21 Biochemical physiological and morphological aspects of mammalian digestive systems *Life of Marsupials* Hugh Tyndale-Biscoe, 2005-04-22 Over the past half a century research has revealed that marsupials far from being second class mammals have adaptations for particular ways of life quite equal to their placental counterparts Despite long separate evolution there are extraordinary similarities in which marsupials have solved the challenges of living in such environments as deserts alpine snowfields or tropical rainforests Some can live on grass some on pollen and others on leaves some can glide some can swim and others hop with extraordinary efficiency In *Life of Marsupials* one of the world's leading experts explores the biology and evolution of this unusual group with their extraordinary diversity of forms around the world in Australia New Guinea and South America Joint winner of the 2005 Whitley Medal Included in Choice Magazine's 2006 Outstanding Academic Titles list

Digestive Physiology and Nutrition of Marsupials Ian D. Hume, 1982-07-08 **The Study of Prosimian Behavior** G.A. Doyle, 2012-12-02 The Study of Prosimian Behavior aims to provide as complete coverage as possible to the field of prosimian behavior Organized into 14 chapters the book begins with the classification of the prosimians followed by the phylogenetic aspects of prosimian behavior It also explains the development of behavior learning intelligence and vocal and olfactory communications in prosimians Furthermore the book looks into the prosimian reproduction how the various prosimian species handle the production and rearing of the young diet and ecology of prosimians role of vision in prosimian behavior

and prosimian locomotor behavior *Reptiles and Herbivory* G.M. King,1996-06-30 For the first time these problems are examined here purely from the perspective of the reptiles Individual groups are looked at the structural physiological and ecological adaptations of the herbivorous members are reviewed The groups discussed include the modern reptiles the lizards and the turtles and also extinct reptiles the dinosaurs and the mammal like reptiles **Wildlife Review** ,1985

Beyond Biotechnology Craig Holdrege,2010-09-12 In 2001 the Human Genome Project announced that it had successfully mapped the entire genetic content of human DNA Scientists politicians theologians and pundits speculated about what would follow conjuring everything from nightmare scenarios of state controlled eugenics to the hope of engineering disease resistant newborns As with debates surrounding stem cell research the seemingly endless possibilities of genetic engineering will continue to influence public opinion and policy into the foreseeable future Beyond Biotechnology The Barren Promise of Genetic Engineering distinguishes between the hype and reality of this technology and explains the nuanced and delicate relationship between science and nature Authors Craig Holdrege and Steve Talbott evaluate the current state of genetic science and examine its potential applications particularly in agriculture and medicine as well as the possible dangers The authors show how the popular view of genetics does not include an understanding of the ways in which genes actually work together in organisms Simplistic and reductionist views of genes lead to unrealistic expectations and ultimately disappointment in the results that genetic engineering actually delivers The authors explore new developments in genetics from the discovery of non Darwinian adaptative mutations in bacteria to evidence that suggests that organisms are far more than mere collections of genetically driven mechanisms While examining these issues the authors also answer vital questions that get to the essence of genetic interaction with human biology Does DNA manage an organism any more than the organism manages its DNA Should genetically engineered products be labeled as such Do the methods of the genetic engineer resemble the centuries old practices of animal husbandry Written for lay readers Beyond Biotechnology is an accessible introduction to the complicated issues of genetic engineering and its potential applications In the unexplored space between nature and laboratory a new science is waiting to emerge Technology based social and environmental solutions will remain tenuous and at risk of reversal as long as our culture is alienated from the plants and animals on which all life depends

The Capped Langur in Bangladesh Craig Britton Stanford,1991-01-01 This monograph presents a detailed report on the social behaviour and ecology of a previously little known species the capped langur *presbytis pileata* The author observed capped langurs at Madhupur National Park in Bangladesh where they live in small one male groups This account of his 15 month field study focuses on the relationships among one male groups and the influence of ecology and seasonal variation in diet upon social behaviour patterns and aspects of intra group and intergroup behaviour which are then used to test predictions of traditional ecological models of primate social systems Features of the capped langur s behaviour and ecology that differ from previously studied colobine monkeys are also described in detail Dodo Anna TC

Feistner, Jeremy JC Mallinson, 2007 Bitika which means tiny in Malagasy is a mouse lemur the earth's smallest primate This story is about baby Bitika growing up and her first forays into the forest where she encounters other lemurs and a potentially tragic situation Bitika saves the day and in spite of her small size feels like a powerful creature of the forest

Biology Norman Saunders, Lyn Hinds, 1997 Marsupial Biology developed from contributions commissioned from those attending an international symposium held in honour of Hugh Tyndale Biscoe Australia's most celebrated marsupial biology authority and co author of the previous leading marsupial biology text published more than 15 years ago The book does not comprise papers of narrow focus read at the symposium but chapters reviewing the knowledge in each key area written to a book format It has been tightly edited to ensure a great degree of harmony and is suitable as a comprehensive reference text for graduate and undergraduate students

Arboreal Forivores: Bestsellers in 2023 The year 2023 has witnessed a remarkable surge in literary brilliance, with numerous captivating novels captivating the hearts of readers worldwide. Lets delve into the realm of bestselling books, exploring the engaging narratives that have charmed audiences this year. Arboreal Forivores : Colleen Hoover "It Ends with Us" This touching tale of love, loss, and resilience has captivated readers with its raw and emotional exploration of domestic abuse. Hoover masterfully weaves a story of hope and healing, reminding us that even in the darkest of times, the human spirit can succeed. Uncover the Best : Taylor Jenkins Reids "The Seven Husbands of Evelyn Hugo" This captivating historical fiction novel unravels the life of Evelyn Hugo, a Hollywood icon who defies expectations and societal norms to pursue her dreams. Reids captivating storytelling and compelling characters transport readers to a bygone era, immersing them in a world of glamour, ambition, and self-discovery. Arboreal Forivores : Delia Owens "Where the Crawdads Sing" This mesmerizing coming-of-age story follows Kya Clark, a young woman who grows up alone in the marshes of North Carolina. Owens crafts a tale of resilience, survival, and the transformative power of nature, entrancing readers with its evocative prose and mesmerizing setting. These bestselling novels represent just a fraction of the literary treasures that have emerged in 2023. Whether you seek tales of romance, adventure, or personal growth, the world of literature offers an abundance of compelling stories waiting to be discovered. The novel begins with Richard Papen, a bright but troubled young man, arriving at Hampden College. Richard is immediately drawn to the group of students who call themselves the Classics Club. The club is led by Henry Winter, a brilliant and charismatic young man. Henry is obsessed with Greek mythology and philosophy, and he quickly draws Richard into his world. The other members of the Classics Club are equally as fascinating. Bunny Corcoran is a wealthy and spoiled young man who is always looking for a good time. Charles Tavis is a quiet and reserved young man who is deeply in love with Henry. Camilla Macaulay is a beautiful and intelligent young woman who is drawn to the power and danger of the Classics Club. The students are all deeply in love with Morrow, and they are willing to do anything to please him. Morrow is a complex and mysterious figure, and he seems to be manipulating the students for his own purposes. As the students become more involved with Morrow, they begin to commit increasingly dangerous acts. The Secret History is a brilliant and gripping novel that will keep you speculating until the very end. The novel is a cautionary tale about the dangers of obsession and the power of evil.
