J.R.L. Principles of Geoarchaeology Michael R. Waters, 1992 Geoarchaeological studies can significantly enhance interpretations of human prehistory by allowing archaeologists to decipher from sediments and soils the effects of earth processes on the evidence of human activity While a number of previous books have provided broad geographic and temporal treatments of geoarchaeology this new volume presents a single author's view intended for North American archaeologists Waters deals with those aspects of geoarchaeology stratigraphy site formation processes and landscape reconstruction most fundamental to archaeology and he focuses on the late Quaternary of North America permitting in depth discussions of the concepts directly applicable to that research Assuming no prior geologic knowledge on the part of the reader Waters provides a background in fundamental geological processes and the basic tools of geoarchaeology He then proceeds to relate specific physical processes microenvironments deposits and landforms associated with riverine desert lake glacial cave coastal and other environments to archaeological site formation location and context This practical volume illustrates the contributions of geoarchaeological investigations and demonstrates the need to make such studies an integral part of archaeological research The text is enhanced by more than a hundred line drawings and photographs

Archaeology and Geology of Ancient Egyptian Stones James A. Harrell, 2024-05-02 This book seeks

to identify and describe all the rocks and minerals employed by the ancient Egyptians using proper geological nomenclature and to give an account of their sources in so far as they are known The various uses of the stones are described as well as the technologies employed to extract transport carve and thermally treat them **Geology and Archaeology** J. Harff,G. Bailey ,F. Lüth ,2016-01-05 Sea level change has influenced human population globally since prehistoric times Even in early phases of cultural development human populations were faced with marine regression and transgression as a result of changing climate and corresponding glacio isostatic adjustment Global marine regression during the last glaciation changed the palaeogeography of the continental shelf converting former marine environments to attractive terrestrial habitats for prehistoric humans These areas of the shelf were used as hunting and gathering areas as migration routes between continents and most probably witnessed the earliest developments in seafaring and marine exploitation until the postglacial transgression re submerged these palaeo landscapes Based on modern marine research technologies and the integration of large databases proxy data are increasingly available for the reconstruction of Quaternary submerged landscapes Also prehistoric archaeological remains from the recent sea bottom are shedding new light on human prehistoric development driven by rapidly changing climate and environment This publication contributes to the exchange of ideas and new results in this young and challenging field of underwater palaeoenvironmental investigation Earth Sciences and Archaeology Paul Goldberg,Vance T. Holliday,C. Reid Ferring,2013-11-11 Earth Sciences and Archaeology brings together contributions from an experienced group of archaeologists and geologists whose common objective is to present thorough and current reviews of the diverse ways in which methods from the earth sciences can contribute to archaeological research Many areas of research are addressed here including artifact analysis and sourcing landscape reconstruction and site formation analysis soil micromorphology and geophysical exploration of buried sites Archaeology has benefited from geological methods in many ways in recent decades However in the past ten to twenty years this informal collaboration between geologists and archaeologists has grown into a formal integration of earth science and archaeology on a significant scale This book allows the contributors to assess where we are in terms of interdisciplinary research which approaches work best in specific situations and where this collaborative approach should progress to in the future *Archaeological Method and Theory* Linda Ellis,2003-12-16 This Encyclopedia brings together the most recent scientific information on a collection of subjects that are too often and inconveniently treated in separate publications It provides a survey of archaeological method and theory as well as the application of physical and biological sciences in archaeological research Every aspect of archaeological work is represented from the discovery process to the ultimate disposition of materials Thus the reader will find entries on subject matter covering disciplinary theory legislation affecting the work of archaeologists pre excavation surveying excavation methodology on site conservation techniques post excavation analysis The rapid evolution of analytical technology is often superficially treated or not covered at all in textbooks or other commonly available sources Here the latest

refinements in techniques such as radiometric dating stable isotopic analysis and the PCR technique of DNA analysis are presented clearly and authoritatively The discussion of these techniques is amplified by including results of the work of professionals conducting interdisciplinary research and by covering the methodological enhancements provided by the physical and natural sciences Cultural property legislation regardless of its country of origin has affected how archaeologists conduct their work This encyclopedia covers all major U S legislation developed for the protection of cultural property including the recent Native American Graves Protection and Repatriation Act and offers a substantial article on worldwide legislation concerning the reburial of human remains and its effects on the present and future practice of archaeology Without some sort of conservation program at the point of excavation valuable materials may be inadvertently contaminated or destroyed Many simple and low cost techniques to promote both sample integrity and long term preservation for major classes of materials are described in this volume Traditional treatments of method and theory usually focus on prehistoric periods and are limited in their geographic range This volume includes discussions based on various historical periods on different continents as reflected in entries such as Historical Archaeology Industrial Archaeology Medieval Archaeology and Classical Archaeology Geoarchaeology George Robert Rapp, Christopher L. Hill, Rapp, MR Christopher L Hill, 2006-01-01

Guidebook to the Archaeological Geology of Classic Paleoindian Sites on the Southern High Plains, Texas and New Mexico , 1986 **Principles of Archaeological Stratigraphy** Edward C. Harris, 2014-06-28 This book is the only text devoted entirely to archaeological stratigraphy a subject of fundamental importance to most studies in archaeology The first edition appeared in 1979 as a result of the invention by the author of the Harris Matrix a method for analyzing and presenting the stratigraphic sequences of archaeological sites The method is now widely used in archaeology all over the world The opening chapters of this edition discuss the historical development of the ideas of archaeological stratigraphy The central chapters examine the laws and basic concepts of the subject and the last few chapters look at methods of recording stratification constructing stratigraphic sequences and the analysis of stratification and artifacts The final chapter which is followed by a glossary of stratigraphic terms gives an outline of a modern system for recording stratification on archaeological sites This book is written in a simple style suitable for the student or amateur The radical ideas set out should also give the professional archaeologist food for thought Covers a basic principle of all archaeological excavations Provides a data description and analysis tool for all such digs which is now widely accepted and used Gives extra information

Encyclopedia of Geoarchaeology Allan S. Gilbert, 2016-08-15 Geoarchaeology is the archaeological subfield that focuses

on archaeological information retrieval and problem solving utilizing the methods of geological investigation Archaeological recovery and analysis are already geoarchaeological in the most fundamental sense because buried remains are contained within and removed from an essentially geological context Yet geoarchaeological research goes beyond this simple relationship and attempts to build collaborative links between specialists in archaeology and the earth sciences to produce new knowledge about past human behavior using the technical information and methods of the geosciences The principal goals of geoarchaeology lie in understanding the relationships between humans and their environment These goals include 1 how cultures adjust to their ecosystem through time 2 what earth science factors were related to the evolutionary emergence of humankind and 3 which methodological tools involving analysis of sediments and landforms documentation and explanation of change in buried materials and measurement of time will allow access to new aspects of the past This encyclopedia defines terms introduces problems describes techniques and discusses theory and strategy all in a format designed to make specialized details accessible to the public as well as practitioners It covers subjects in environmental archaeology dating materials analysis and paleoecology all of which represent different sources of specialist knowledge that must be shared in order to reconstruct analyze and explain the record of the human past It will not specifically cover sites civilizations and ancient cultures etc that are better described in other encyclopedias of world archaeology The Editor Allan S Gilbert is Professor of Anthropology at Fordham University in the Bronx New York He holds a B A from Rutgers University and his M A M Phil and Ph D were earned at Columbia University His areas of research interest include the Near East late prehistory and early historic periods as well as the Middle Atlantic region of the U S historical archaeology His specializations are in archaeozoology of the Near East and geoarchaeology especially mineralogy and compositional analysis of pottery and building materials Publications have covered a range of subjects including ancient pastoralism faunal quantification skeletal microanatomy brick geochemistry and two co edited volumes on the marine geology and geoarchaeology of the Black Sea basin *Effects of Scale on Archaeological and Geoscientific Perspectives* Julie K.
