Archaeology's Visual Culture Roger Balm, 2015-12-14 Archaeology's Visual Culture explores archaeology through the lens of visual culture theory The insistent visibility of archaeology is a key stimulus for the imaginative and creative interpretation of our encounters with the past Balm investigates the nature of this projection of the visual revealing an embedded subjectivity in the imagery of archaeology and acknowledging the multiplicity of meanings that cohere around artifacts archaeological sites and museum displays Using a wide range of case studies the book highlights how archaeologists can view objects and the consequences that ensue from these ways of seeing Throughout the book Balm considers the potential for documentary images and visual material held in archives to perform cultural work within and between groups of specialists With primary sources ranging from the mid nineteenth to the early twenty first century this volume also maps the intellectual and social connections between archaeologists and their peers Geographical settings include Britain Cyprus Mesoamerica the Middle East and the United States and the sites of visual encounter are no less diverse ranging from excavation reports in salvage archaeology to instrumentally derived data sets and remote sensing imagery By forensically examining selected visual records from published accounts and archival sources enduring tropes of representation become apparent that transcend issues of style and reflect fundamental visual sensibilities within the discipline of archaeology

Towards a Social Bioarchaeology of the Mycenaean Period Ioanna Moutafi, 2021-06-09 This book investigates the complex relationship between funerary treatment and wider social dynamics through a contextual analysis of human skeletal remains and associated mortuary data from Voudeni an important Mycenaean 1450-1050 BC chamber tomb cemetery in Achaea Greece Voudeni is one of the most significant sites of Achaea thoroughly investigated under the direction of the Honorary General Director of Antiquities Dr Lazaros Kolonas Over 60 chamber tombs spanning the entire Late Helladic III period have been excavated yielding an unprecedented wealth of biocultural information This study explores the post mortem treatment of the body in the Voudeni cemetery through a novel interpretive approach that transcends unproductive cross disciplinary divisions This biosocial approach integrates traditional archaeology current reflections in mortuary archaeological theory and cutting edge bioarchaeological methods primarily focused on funerary taphonomy and archaeoethnology of commingled skeletal assemblages The author proposes that the most effective route to explore the social dimensions of mortuary data is through an emic understanding of historically situated actions and

experiences both of the living actors the mourners and of the dead themselves Human skeletal remains are used as the primary strand of evidence both as the object of the acts of the living and the subject of their own lived experiences Most importantly this study aspires to show how reconciliation between abstract theoretical advances and empirical biocultural data may be possible providing the most insightful path to a better understanding of the archaeological mortuary record The book provides a thorough background on Mycenaean mortuary research and explores the topic in successive stages a theoretical and methodological framework b detailed taphonomic analysis and osteological results of 20 tombs c multivariate analysis of bio cultural data across socio temporal parameters with special emphasis on the distinction between the palatial LHIIIA B and the transitional post palatial LHIIIC period and d final synthesis addressing questions pertaining to changing social conditions in Achaea and key issues of current Mycenaean mortuary research These include tomb re use form diversity sequence and frequency of mortuary activities mortality profiles differential inclusion visibility and funerary treatment of different groups identities changes in treatment of the dead body reflecting shifts in notions of the self and social relationships The results shed new light on social developments in Mycenaean Achaea showing that the complex interaction between changing social conditions and mortuary practice is often reflected in subtle yet meaningful shifts of emphasis in the post mortem treatment of bodies and bones rather than in blatant radical changes

The Interpretation of Archaeological Spatial Patterning Ellen M. Kroll, T. Douglas Price, 2013-06-29 Investigations of archaeological intrasite spatial patterns have generally taken one of two directions studies that introduced and explored methods for the analysis of archaeological spatial patterns or those that described and analyzed the formation of spatial patterns in actualistic ethnographic experimental or natural contexts The archaeological studies were largely quantitative in nature concerned with the recognition and definition of patterns the actualistic efforts were often oriented more toward interpretation dealing with how patterns formed and what they meant Our research group on archaeological spatial analysis at the University of Wisconsin Madison has been working for several years on both quantitative and interpretive problems Both lines of investigation are closely related and are important complements In order to demonstrate the convergence of archaeological and actualistic studies for the understanding of intrasite spatial patterns we organized a symposium at the 52nd Annual Meeting of the Society of American Archaeology in Toronto Canada in May 1987 The symposium titled The Interpretation of Stone Age Archaeological Spatial Patterns was organized into two sessions The six papers presented in the morning session five of which comprise Part I of this volume focused on ethnoarchaeological and experimental research Michael Schiffer was the discussant for this half of the symposium Our intention for the ethnoarchaeological contributions to the symposium and volume was the delineation of some of the significant accomplishments achieved thus far by actualistic studies regarding the formation of spatial patterns
