Cultivating Regionalism Kenneth H. Wheeler, 2011-11-01 In this ambitious book Kenneth Wheeler revises our understanding of the nineteenth century American Midwest by reconsidering an institution that was pivotal in its making the small college. During the antebellum decades Americans built a remarkable number of colleges in the Midwest that would help cultivate their regional identity. Through higher education the values of people living north and west of the Ohio River formed the basis of a new Midwestern culture. *Cultivating Regionalism* shows how college founders built robust institutions of higher learning in this socially and ethnically diverse milieu. Contrary to conventional wisdom these colleges were much different than their counterparts in the East and South not derivative of them as many historians suggest. Manual labor programs for instance nurtured a Midwestern zeal for connecting mind and body. And the coeducation of men and women at these schools exploded gender norms throughout the region. Students emerging from these colleges would ultimately shape the ethos of the Progressive era and in large numbers take up scientific investigation as an expression of their egalitarian production oriented training. More than a history of these antebellum schools this elegantly conceived work exposes the interplay in regionalism between thought and action who antebellum Midwesterners imagined they were and how they built their colleges in distinct ways.

Twentieth Century Interpretations of Arrowsmith Robert J. Griffin, 1968 Shows the reasons that *Arrowsmith* has remained so important and controversial on the American literature scene and examines Lewis' achievements in writing it.

The Hunt for the Parathyroids Jörgen Nordenström, 2012-09-17 The Hunt for the Parathyroid Gland is a part fact part fiction overview of the discovery of the parathyroid gland by a Swedish scientist in 1880. The discovery of the parathyroid gland in humans in 1880 by an unknown Swedish medical student Ivar Viktor Sandström ended a 30 year search for its exact location within the human body following its discovery in an Indian rhino 30 years before. It is one of the most engaging and remarkable stories in the history of medicine. This book offers a fascinating insight into its discovery. Endocrinologists and ENT health professionals both in clinical practice and researchers as well as anyone with an interest in the history of medicine will find this a fascinating insight into one of the 19th century's key medical discoveries.

Medical Progress and Social Reality Lilian R. Furst, 2012-02-01 *Medical Progress and Social Reality* is an anthology of nineteenth century literature on medicine and medical practice. Situated at the interdisciplinary juncture of medicine history and literature it includes mostly fictional but also some nonfictional works by British, French, American and Russian writers that describe the day to day social realities of medicine during a period of momentous change. Issues addressed in these works include the hierarchy in the profession, the use of new instruments such as the stethoscope, the advent of women doctors, the function of the hospital and the shifting balance of power between physicians and patients. The volume provides an introductory overview of the most important aspects of medical progress in the nineteenth century and it includes an annotated bibliography of further readings in medical history and literature. Selections from Anthony Trollope, George Eliot, Gustave Flaubert, Sarah Orne Jewett, Sinclair Lewis, Mikhail Bulgakov and others are included as well as the American

Medical Association's 1847 Code of Ethics **Sympathy and Science** Regina Morantz-Sanchez, 2005-10-12 When first published in 1985 *Sympathy and Science* was hailed as a groundbreaking study of women in medicine. It remains the most comprehensive history of American women physicians available. Tracing the participation of women in the medical profession from the colonial period to the present, Regina Morantz Sanchez examines women's roles as nurses, midwives, and practitioners of folk medicine in early America; recounts their successful struggles in the nineteenth century to enter medical schools and found their own institutions and organizations; and follows female physicians into the twentieth century exploring their efforts to sustain significant and rewarding professional lives without sacrificing the other privileges and opportunities of womanhood. In a new preface, the author surveys recent scholarship and comments on the changing world of women in medicine over the past two decades. Despite extraordinary advances, she concludes, women physicians continue to grapple with many of the issues that troubled their predecessors.

The book examines each of Lewis's novels on key themes in the history of political thought and democracy, including freedom and purpose, success and materialism, and nationalism and race. Lewis is revealed to be an unapologetic individualist and a fierce humanitarian. Unmade in America Timothy Archibald Yates, 2007 **The Publishers Weekly**, 1961 *Nobel Prizes: Cancer, Vision And The Genetic Code* Erling Norrby, 2019-09-18 The present book discusses the Nobel Prizes in physiology or medicine 1966-68. The 1966 prize recognized that viruses may be involved in cancer formation. Later studies revealed that these kinds of infectious agents could pick up and transmit cellular genes of importance for regulation of cellular growth. It was then possible to recognize that many genes of this kind could be involved in the formation of cancer. The disease was found to represent the dark side of evolution. As a consequence of this insight, new means of treatment fortunately have been developed. The rear parts of the eyes are extensions of the central nervous system. They have a fascinating intrinsic complexity, the neurophysiology and biochemistry of which has been progressively analyzed. These revealing studies concern both our capacity to distinguish different colors and also our possibility to see in the dark. The Prize in 1967 identified seminal contributions in this wide field.

by Ragnar Granit Haldan Hartline and George Wald The 1968 Prize is distinct in its recognition of Robert Holley Ghobind Khorana and Marshall Nirenberg who in different ways had contributed to the cracking of the genetic code Insights into the language used by Nature since the dawn of cellular life some 4 6 billion years ago have completely revolutionized modern life sciences The capacity to read and also to write the books of life has defined new kinds of science deepening our understanding of the magic of evolution and opened the possibilities for molecular medicine by understanding the genetic background to diseases not least cancer Related Link s

Babbitt Sinclair Lewis,1961-10 In the fall of 1920 Sinclair Lewis began a novel set in a fast growing city with the heart and mind of a small town For the center of his cutting satire of American business he created the bustling shallow and myopic George F Babbitt the epitome of middle class mediocrity The novel cemented Lewis s prominence as a social commentator Babbitt basks in his pedestrian success and the popularity it has brought him He demands high moral standards from those around him while flirting with women and he yearns to have rich friends while shunning those less fortunate than he But Babbitt s secure complacency is shattered when his best friend is sent to prison and he struggles to find meaning in his hollow life He revolts but finds that his former routine is not so easily thrown over
