on the form of intervention and the client's needs. There is really a valuable resource of meaningful and relevant examples from their own clinical work. These examples clearly validate and illustrate the seminal theoretical concept of the first great pioneer of music therapy in the United Kingdom, Juliette Alvin, who taught us that music is a creation of people and therefore we can see people in their music. Professor Tony Wigram's *Music Therapy* is an introduction to contemporary training and practice. Written in a clear, jargon-free style, the book provides a lively source of information and ideas for all who are new to music therapy. Written by highly experienced practitioners, the book examines improvisation, the principal method for music therapy, and points to the underlying assumptions about music which shape this way of working. Two of the main music therapy approaches, Analytic Music Therapy and Nordoff Robbins Music Therapy, are also outlined. Drawing on their own experience, the authors examine a range of clinical situations and give examples of working with children and adults with a range of needs, including autism, learning disabilities, and mental health problems. They highlight the many issues which arise from day-to-day practice and explore other aspects of professional life, such as personal therapy and supervision. For anyone training or thinking of training to be a music therapist, this book provides an ideal place to start. As a guide to contemporary music therapy, it also has much to offer those already in practice.
