Agricultural Price Policy Isabelle Tsakok,2019-05-15 Many governments of developing countries burdened with international debt are under ever increasing pressure to use their scarce economic resources wisely Faced with slow progress in alleviating poverty and stimulating economic growth they especially need to end wasteful subsidies and revise inefficient tax policies This book will help staff members of government planning agencies and ministries of finance and agriculture to analyze the effects of government policies on the production consumption and export of agricultural

commodities The analytical techniques that Isabelle Tsakok demonstrates in this book are the essential first step in reforming agricultural price policy to bring about a more efficient allocation of resources After mastering the techniques of single market partial equilibrium analysis which are the book's focus policy analysts can use the techniques to identify when more sophisticated methods such as multi market analysis and computable general equilibrium models are needed to determine what agricultural price policies are right Tsakok begins with graphical analysis and data requirements in order to build intuitive understanding and progresses through steadily more complex techniques demonstrating step by step the calculation of domestic resource costs effective rates of protection and related coefficients of protection Providing a wide range of numerical real world examples to illustrate the practical application of the partial equilibrium framework Agricultural Price Policy is an invaluable reference manual and teaching tool

The Collected Scientific Papers of Paul A. Samuelson

Paul Anthony Samuelson, 1966-02 It is a measure of Professor Samuelson's preeminence that the sheer scale of his work should be so much taken for granted observes a reviewer in the Economist who goes on to note that a cynic might add that it would have been better for Professor Samuelson to write less merely to give others a chance to write at all These volumes contain virtually all of Professor Paul A Samuelson's contributions to economic theory through mid 1964 a total of 129 papers Included are his classic articles on such topics as revealed preference factor price equalization and public goods as well as some articles which until now have only been privately circulated or buried in Festschriften such as Market Mechanisms and Maximization and The Structure of a Minimum Equilibrium System The articles have been grouped together into five books compiled in two volumes The books in turn have been divided into sections each of which contains articles on the same or closely related topics Within the sections the articles are arranged chronologically The graduate student and professional economist will welcome The Collected Scientific Papers of Paul A Samuelson as a valuable addition to their libraries
