Control and Dynamic Systems V59: Computer-Aided Design/Engineering (Cad/Cae) Techniques And Their Applications Part 2 of 2 C.T. Leonides,2012-12-02 Control and Dynamic Systems Volume 59 Computer Aided Design Engineering CAD CAE Techniques and Their Applications Part 2 of 2 is the second of a two volume sequence that manifests the significance and the power of CAD CAE techniques that are available and their further development for the essential role they play in the design of modern engineering systems The volume contains 10 chapters and begins with an in depth treatment of the essential integration that must exist between design and manufacturing systems This is followed by separate chapters on object oriented programming OOP and graphical user interface GUI technologies that support the CAD CAE design process in particular by means of the PC and the workstation and the role of a geometrically associative analysis modeler in the design optimization process Subsequent chapters deal with finite analysis modeling for the integration of CAD CAE technology and finite element method the mechanical analysis of two large structures the world s largest telescope the 8m ESO VLT and a 3 D nuclear power plant heat exchanger and techniques for CAD for electromagnetic systems and components The final chapters cover aircraft structural design techniques for determining the adequacy of the number of grids i e grid quality control in computational fluid dynamics CFD and techniques or the optimum design of control systems using system model variables and parameters The contributions to this volume will provide a significant and perhaps unique reference source for students research workers practicing engineers and others on the international scene for many years

Harris,2014-06-28 Practices of Archaeological Stratigraphy brings together a number of examples which illustrate the development and use of the Harris Matrix in describing and interpreting archaeological sites This matrix the theory of which is described in two editions of the previous book by Harris Principles of Archaeological Stratigraphy made possible for the first time a simple diagrammatic representation of the stratigraphic sequence of a site no matter how complex The Harris Matrix by showing in one diagram all three linear dimensions plus time represents a quantum leap over the older methods which relied on sample sections only In this book 17 essays present a sample of new work demonstrating the strengths and uses of the Harris Matrix the first ever published collection of papers devoted solely to stratigraphy in archaeology The crucial relationships between the Harris methods open area excavation techniques the interpretation of interfaces and the use of single context plans and recording sheets is clarified by reference to specific sites These sites range from medieval Europe through Mayan civilizations to Colonial Williamsburg Virginia This book will be of great value to all those involved in excavating and recording archaeological sites and should help to ensure that the maximum amount of stratigraphic information can be gathered from future investigations Presents case studies which illuminate the Harris matrix method invented by Edward C Harris Senior editor is the inventor of this method and principle in the field Serves as a companion volume to Harris s Principles of Archaeological Stratigraphy
