Development and Perspectives of Landscape Ecology O. Bastian, Uta Steinhardt, 2013-03-14 Development and status of landscape ecology subject of this book During the last decades landscape ecology has developed tremendously It concerns both the theoretical basis and practical application The roots of landscape ecology are geography and biology The term landscape ecology was first coined by the German scientist Carl Troll in 1939 nce the development center of landscape ecology was in Central Europe Recently also other parts of the world became powernd centers of landscape ecology especially Northern America American approaches partly differ essentially from the European because they are focused esp on biogeography and population dynamics In Europe however the geographical roots of landscape ecology play a major role Landscape is defined as a complex of abiotic biotic and human components Mainly due to linguistic barriers the international discussion does not take notice of approaches and experiences from non anglophone countries in a sufficient manner Therefore this book considers more the German and European views on landscape ecology than the books which were published before It tries to bridge the gaps between theory and practice of landscape ecology as well between the German European and American approaches The book gives a fundamental representation of landscape ecology which proves to be a young but an interesting and very important transdisciplinary science for the solution of environmental problems Both the theoretical basis and practical application of landscape ecology are considered *Framework Landscape Approach in Displacement Settings: Review and concept* Schure, J., Gambo, J., Sola, P., Awono, A., Buyinza, J., Ndzodo, A., 2022-09-14
