Appropriating The Weather Vilhelm Bjerknes And The Construction Of A Modern Meteorology:

Appropriating the Weather Robert Marc Friedman, 2018-07-05 In this book Robert Marc Friedman analyzes the revolution in the theory and practice of meteorology during the first quarter of the twentieth century initiated by Vilhelm Bjerknes 1862 1951 and his collaborators In contrast to the approach that had dominated meteorology since the late nineteenth century their weather models and forecasting techniques marked a decisive turn to a dynamical physical understanding of the atmosphere Using a wide range of sources both published and unpublished Friedman traces the emergence of the new so called Bergen methodology and the process by which it transformed first Norwegian and then worldwide weather forecasting The establishment of the new meteorology he argues was the result of a complex interaction of scientific social and technological factors and he gives special emphasis to the way in which Bjerknes adapted his mechanical physics of the atmosphere to benefit commercial purposes By providing more reliable forecasts for farmers fishermen and especially for aviators Bjerknes was able to nurture a school of disciples that could exert a profound influence on the international meteorological community thereby increasing his own authority and that of the discipline he sought to shape Friedman does an unusually subtle job of integrating the often opposing methods of the history and the sociology of science He explains in detail how Bjerknes a theoretical physicist and his collaborators developed a new model of cyclone evolution and the first clear physical explanation of how weather happens At the same time Friedman demonstrates how conceptual change was interconnected with the Bergen school's striving to obtain political support at home and to dominate professional meteorology abroad *Appropriating the Weather* is an invaluable contribution to our understanding of the processes in which scientific institutional and social factors interact to form scientific disciplines It deserves wide readership among historians and sociologists of science and science policy makers as well as meteorologists and other geophysical scientists Winner of the Louis J Battan Author's Award American Meteorological Society Winner of the Jehuda Neumann Memorial Prize for History Royal Meteorological Society One of eight classics of 20th century continental European history of science Isis History of Science Society

Meteorology in Nineteenth-Century Society Aitor Anduaga, 2025-10-20 This four volume set of thematically focused and curated primary sources examines meteorology in nineteenth century society Knowing the history of meteorology and climatology since their inception as physical sciences in the nineteenth century is fundamental to understanding the causes and historical patterns of the severe weather and climate change that greatly preoccupy today's society Thematically focused collections of primary sources support the research and study needs not only of scholars but also graduate and postgraduate students To this end the volumes contextualize and explain the contents of these sources The collection brings together the most relevant themes in current scholarship weather forecasting and nation state building cyclones trade and navigation meteorology and religion and weather climate and empire

Meteorology at the Millennium Robert P. Pearce, 2005-02-22 *Meteorology at the Millennium* details recent advances in meteorology and

explores its interfaces with science technology and society Ways in which modern meteorology is contributing to the developments in other sciences are described as well as how atmospheric scientists are learning from colleagues in related disciplines Meteorology at the Millennium will serve as a point of reference for students and researchers of meteorology and climatology for many years to come The areas covered include weather prediction at the millennium climate variability and change atmosphere ocean coupling the biogeochemical system weather on other planets This book is a compilation of the best invited papers presented at a conference celebrating the 150 years of the Royal Meteorological Society RMS **Alfred Wegener** Mott T. Greene, 2015-10-30 The book should be of interest not only to earth scientists students of polar travel and exploration and historians but to all readers who are fascinated by the great minds of science Henry R Frankel University of Missouri Kansas City author of The Continental Drift Controversy Science Education **Science Serialized** Geoffrey Cantor, Sally Shuttleworth, 2004-03-12 Essays examining the ways in which the Victorian periodical press presented the scientific developments of the time to general and specialized audiences Nineteenth century Britain saw an explosion of periodical literature with the publication of over 100 000 different magazines and newspapers for a growing market of eager readers The Victorian periodical press became an important medium for the dissemination of scientific ideas Every major scientific advance in the nineteenth century was trumpeted and analyzed in periodicals ranging from intellectual quarterlies such as the Edinburgh Review to popular weeklies like the Mirror of Literature from religious periodicals such as the Evangelical Magazine to the atheistic Oracle of Reason Scientific articles appeared side by side with the latest fiction or political reporting while articles on nonscientific topics and serialized novels invoked scientific theories or used analogies drawn from science The essays collected in Science Serialized examine the variety of ways in which the nineteenth century periodical press represented science to both general and specialized readerships They explore the role of scientific controversy in the press and the cultural politics of publication Subject range from the presentation of botany in women s magazines to the highly public dispute between Darwin and Samuel Butler and from discussions of the mind body problem to those of energy physics Contributors include leading scholars in the fields of history of science and literature Ann B Shteir Jonathan Topham Frank A J L James Roger Smith Graeme Gooday Crosbie Smith Ian Higginson Gillian Beer Bernard Lightman Helen Small Gowan Dawson Jonathan Smith James G Paradis and Harriet Ritvo Scanning the Skies Marlene Bradford, 2001 Tornadoes nature s most violent and unpredictable storms descend from the clouds nearly one thousand times yearly and have claimed eighteen thousand American lives since 1880 However the U S Weather Bureau fearing public panic and believing tornadoes were too fleeting for meteorologists to predict forbade the use of the word tornado in forecasts until 1938 Scanning the Skies traces the history of today s tornado warning system a unique program that integrates federal state and local governments privately controlled broadcast media and individuals Bradford examines the ways in which the tornado warning system has grown from meager beginnings into a program that protects millions of Americans each year

Although no tornado forecasting program existed before WWII the needs of the military prompted the development of a severe weather warning system in tornado prone areas Bradford traces the post war creation of the Air Force centralized tornado forecasting program and its civilian counterpart at the Weather Bureau Improvements in communication especially the increasing popularity of television allowed the Bureau to expand its warning system further This book highlights the modern tornado watch system and explains how advancements during the latter half of the twentieth century such as computerized data collection and processing systems Doppler radar state of the art television weather centers and an extensive public education program have resulted in the drastic reduction of tornado fatalities

Science, Geopolitics and Culture in the Polar Region Professor Sverker Sörlin,2013-10-28 Throughout the twentieth century glaciologists and geophysicists from Denmark Norway and Sweden made important scientific contributions across the Arctic and Antarctic This research was of acute security and policy interest during the Cold War as knowledge of the polar regions assumed military importance But scientists also helped make the polar regions Nordic spaces in a cultural and political sense with scientists from Norden punching far above their weight in terms of population geographical size or economic activity This volume presents an image of Norden that stretches far beyond its conventional limits covering a vast area in the North Atlantic and the Arctic Sea as well as parts of Antarctica Rich in resources scarce in population but critically important in global and regional geopolitics these spaces were contested by major powers such as Russia the United States Canada and in the Antarctic Argentina Australia South Africa and others The empirical focus on Danish Norwegian and Swedish influence in the polar regions during the twentieth century embraces a diverse array of themes from the role of science in policy and diplomacy to the tensions between nationalism and internationalism with clear relevance to the important role science plays in contemporary discussions about Nordic engagement with the polar regions

Chaos in the Heavens Jean-Baptiste Fressoz,Fabien Locher,2024-03-12 Nothing could seem more contemporary than climate change Yet in Chaos in the Heavens Jean Baptiste Fressoz and Fabien Locher show that we have been thinking about and debating the consequences of our actions upon the environment for centuries The subject was raised wherever history accelerated by the conquistadors in the New World by the French revolutionaries of 1789 by the scientists and politicians of the nineteenth century by the European imperialists in Asia and Africa until the Second World War Climate change was at the heart of fundamental debates about colonisation God the state nature and capitalism From these intellectual and political battles emerged key concepts of contemporary environmental science and policy For a brief interlude science and industry instilled in us the reassuring illusion of an impassive climate But in the age of global warming we must once again confront the chaos in the heavens

National Military Establishments and the Advancement of Science and Technology P. Forman,José M. Sánchez-Ron,2001-11-30

To some philosophers seeking to understand the human condition technology is a necessary guide But to think through the complex human phenomenon of technology we must tackle philosophy of science philosophy of culture moral issues comparative civilizational studies and the economics of specific industrial and military technologies in their historical contexts The philosopher wants to grasp the technological factor in this troubled world even as we see it is only one factor and that it does not speak openly for itself Put directly our human troubles to a considerable extent have been transformed exaggerated distorted even degraded perhaps transcended by what engineers and scientists entrepreneurs and politicians have wrought But our problems are ancient problems of dominations struggles survival values in conflict greed and insane sadisms To get some conceptual light on the social reality which seems immediately to be so complicated a philosopher will need to learn from the historians of technology A few years ago the philosopher Elisabeth Straker concluded that a historical philosophy of technology is required since history and history alone provides all those concepts that form part of the repertoire of the philosophical analysis of technology And she added that this goes far beyond the triviality that like other cultural achievements technology has its historical development Now historical comprehension is no substitute for a logical methodology in the analysis of technological problems

Media and the Politics of Arctic Climate Change Miyase Christensen, Annika E. Nilsson, N. Wormbs, 2013-10-31 Combining multidisciplinary perspectives and new research this volume goes beyond broad discussions of the impacts of climate change and reflects on the current and historical mediations and narratives that are part of creating this new social and scientific reality

Under the Weather National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Committee on Climate, Ecosystems, Infectious Disease, and Human Health, 2001-05-29 Since the dawn of medical science people have recognized connections between a change in the weather and the appearance of epidemic disease With today's technology some hope that it will be possible to build models for predicting the emergence and spread of many infectious diseases based on climate and weather forecasts However separating the effects of climate from other effects presents a tremendous scientific challenge Can we use climate and weather forecasts to predict infectious disease outbreaks Can the field of public health advance from surveillance and response to prediction and prevention And perhaps the most important question of all Can we predict how global warming will affect the emergence and transmission of infectious disease agents around the world Under the Weather evaluates our current understanding of the linkages among climate ecosystems and infectious disease it then goes a step further and outlines the research needed to improve our understanding of these linkages The book also examines the potential for using climate forecasts and ecological observations to help predict infectious disease outbreaks identifies the necessary components for an epidemic early warning system and reviews lessons learned from the use of climate forecasts in other realms of human activity

Frozen Empires Adrian Howkins, 2017 *Frozen Empires* is a study of the ways in which imperial powers American European and South American have used and continue to use the environment and the value of

scientific research to support their political claims in the Antarctic Peninsula region In making a case for imperial continuity this book offers a new perspective on Antarctic history and on global environmental politics more broadly *Ice and Snow in the Cold War* Julia Herzberg, Christian Kehrt, Franziska Torma, 2018-10-19 The history of the Cold War has focused overwhelmingly on statecraft and military power an approach that has naturally placed Moscow and Washington center stage Meanwhile regions such as Alaska the polar landscapes and the cold areas of the Soviet periphery have received little attention However such environments were of no small importance during the Cold War in addition to their symbolic significance they also had direct implications for everything from military strategy to natural resource management Through histories of these extremely cold environments this volume makes a novel intervention in Cold War historiography one whose global and transnational approach undermines the simple opposition of East and West Scientists and the Sea, 1650-1900 Margaret Deacon, 2018-04-17 Scientists and the Sea is a history of how the scientific study of the sea has developed over a period of nearly 2500 years Beginning with the speculations of Greek philosophers it carries the story forward showing how curiosity about the ocean appeared in many different forms and locations before in the late 19th century the first deep sea researches heralded the foundation of the science known today as oceanography Originally published in 1971 this book has never been superseded as the most comprehensive and wide ranging treatment of the emergence of marine science within the western scientific tradition After three introductory chapters dealing with knowledge up to the Renaissance the main part of the work shows how pioneers of scientific observation at sea during the 17th and 18th centuries made notable discoveries but that it was not until the middle of the 19th century when aided by the advance of technology scientists were able to undertake the first explorations of the ocean depths This second edition contains a new introduction and bibliography

and Climate Science Matthias Heymann, Gabriele Gramelsberger, Martin Mahony, 2017-06-26 In recent decades science has experienced a revolutionary shift The development and extensive application of computer modelling and simulation has transformed the knowledge making practices of scientific fields as diverse as astro physics genetics robotics and demography This epistemic transformation has brought with it a simultaneous heightening of political relevance and a renewal of international policy agendas raising crucial questions about the nature and application of simulation knowledges throughout public policy Through a diverse range of case studies spanning over a century of theoretical and practical developments in the atmospheric and environmental sciences this book argues that computer modelling and simulation have substantially changed scientific and cultural practices and shaped the emergence of novel cultures of prediction Making an innovative interdisciplinary contribution to understanding the impact of computer modelling on research practice institutional configurations and broader cultures this volume will be essential reading for anyone interested in the past present and future of climate change and the environmental sciences

Turbulence—an Odyssey Michael Eckert, 2022-02-01 Turbulence is a research field where high expectations have met with recurrent frustration It is a common perception among physicists mathematicians and engineers that there is a big mystery behind the phenomenon of turbulence Its history has also remained anything but well researched Unlike topics such as quantum theory which began to attract physics historians as long as fifty years ago turbulence has until now received only little professional historical investigation In this book which complements his earlier SpringerBrief *The Turbulence Problem* the author sketches the history of turbulence from the vantage point of its roots Part I the basic concepts Part II and the formation of a scientific community that regarded turbulence as a research field in its own right Part III From this perspective turbulence research appears to undertake an odyssey through uncharted territories The book follows this development up until a conference in Marseille in the year 1961 which marked the inauguration of turbulence in the words of its organizer as a new science The epilogue contains some observations about turbulence research since 1961 This book provides a rich source of information for all those interested in the history of this major field of basic and applied science
