Archaeological Theory And Scientific Practice:

Archaeological Theory and Scientific Practice Andrew Jones, 2001-12-06 Is archaeology an art or a science This question has been hotly debated over the last few decades with the rise of archaeological science At the same time archaeologists have seen a change in the intellectual character of their discipline as many writers have adopted approaches influenced by social theory The discipline now encompasses both archaeological scientists and archaeological theorists and discussion regarding the status of archaeology remains polarised In this 2001 book Andrew Jones argues that we need to analyse the practice of archaeology Through an analysis of archaeological practice influenced by recent developments in the field of science studies and with the aid of extensive case studies he develops a new framework which allows the interpretative and methodological components of the discipline to work in tandem His reassessment of the status and character of archaeology will be of interest to students scholars and professionals

Archaeological Theory and the Politics of Cultural Heritage Laurajane Smith, 2004 This is a much needed survey of how relationships between indigenous peoples and the archaeological establishment have got into difficulties and a pointer towards how things could move forward

Archaeological Theory in the New Millennium Oliver J. T. Harris, Craig Cipolla, 2017-06-26 Archaeological Theory in the New Millennium provides an account of the changing world of archaeological theory and a challenge to more traditional narratives of archaeological thought It charts the emergence of the new emphasis on relations as well as engaging with other current theoretical trends and the thinkers archaeologists regularly employ Bringing together different strands of global archaeological theory and placing them in dialogue the book explores the similarities and differences between different contemporary trends in theory while also highlighting potential strengths and weaknesses of different approaches Written in a way to maximise its accessibility in direct contrast to many of the sources on which it draws Archaeological Theory in the New Millennium is an essential guide to cutting edge theory for students and for professionals wishing to reacquaint themselves with this field

Gender Trouble and Current Archaeological Debates Uroš Matić, Bisserka Gaydarska, Laura Coltofean, Marta Díaz-Guardamino, 2024-10-28 This volume challenges the status quo by addressing a selection of intensely discussed themes in contemporary archaeological practice from a gender perspective It aims to demonstrate that gender is intrinsic to archaeology and that gender archaeology can

enrich our studies irrespective of the discipline's possible future directions and so called paradigm shifts. The scholarly contributions commissioned for this volume critically discuss and reflect on a wide range of concepts, ideas, principles and theories presently applied in archaeology within the framework of gender. The chapters included in the first part deal with themes in world archaeology that have little or no focus on gender such as the Third Science Revolution, e.g. ancient DNA, stable isotopes analyses, big data, posthumanism, e.g. new materialism, symmetrical archaeology and the ontological turn and digital archaeology and heritage. The second part focuses on themes in which gender archaeology has made serious advances: intersectionality, social inequality, violence, mobility. The third part deals with themes crucial for contemporary archaeology and society, namely gender education, gender representation in museum exhibitions and the future of gender archaeology. The volume concludes with a coda chapter that critically assesses the preceding contributions and the volume as a whole. The book offers a gender balanced and inclusive authorship consisting of both well established and early career researchers closely connected to the EAA whose professionally, culturally and geographically diverse backgrounds and experiences enrich the viewpoints discussed in the chapters. The targeted audience is archaeologists from all theoretical and scientific backgrounds at all stages of their career. William L. Rathje, Michael Shanks, Christopher Witmore, 2013-01-03. *Archaeology in the Making* is a collection of bold statements about archaeology: its history, how it works and why it is more important than ever. This book comprises conversations about archaeology among some of its notable contemporary figures. They delve deeply into the questions that have come to fascinate archaeologists over the last forty years or so: those that concern major events in human history such as the origins of agriculture and the state, and questions about the way archaeologists go about their work. Many of the conversations highlight quite intensely held personal insight into what motivates us to pursue archaeology; some may even be termed outrageous in the light they shed on the way archaeological institutions operate: excavation teams, professional associations, university departments. *Archaeology in the Making* is a unique document detailing the history of archaeology in the second half of the 20th century to the present day through the words of some of its key proponents. It will be invaluable for anybody who wants to understand the theory and practice of this ever developing discipline. *Archaeology After Interpretation* Benjamin Alberti, Andrew Meirion Jones, Joshua Pollard, 2016-06-16. A new generation of archaeologists has thrown down a challenge to post-processual theory, arguing that characterizing material symbols as arbitrary overlooks the material character and significance of artifacts. This volume showcases the significant departure from previous symbolic approaches that is underway in the discipline. It brings together key scholars advancing a variety of cutting edge approaches, each emphasizing an understanding of artifacts and materials not in terms of symbols but relationally as a set of associations that compose people's understanding of the world. Authors draw on a diversity of intellectual sources and case studies paving

a dynamic road ahead for archaeology as a discipline and theoretical approaches to material culture Ghost Culture John G. Sabol Jr.,2007-06-21 This book is part of a series of ethnographic studies in cultural hauntings and ghostly landscapes The first book *Ghost Excavator Unearthing the Drama in the Mine Fields* was a personal excavation of the haunted Mahanoy Area In this second book a theory of cultural hauntings is presented that serves as a framework for investigative fieldwork Specific techniques are introduced as a means of scientific practices to evaluate the data observed and recorded at haunted locations This book is meant to form the infrastructure of a developing ghost science one built from the bottom up The integrated symmetrical approach of theory and scientific practice that is outlined here is a beginning point for the continuing evolution of the ghost science of the future This search and analysis of haunting phenomena is seen as an approach that can be participated in by the many and who through their continuing efforts will help fill in the blanks of a ghost map of what Shakespeare has called the undiscovered country *A Maritime Archaeology of Ships* J. R. Adams,2013-12-11 In the last fifty years the investigation of maritime archaeological sites in the sea in the coastal zone and in their interconnecting locales has emerged as one of archaeology's most dynamic and fast developing fields No longer a niche interest maritime archaeology is recognised as having central relevance in the integrated study of the human past Within maritime archaeology the study of watercraft has been understandably prominent and yet their potential is far from exhausted In this book Jon Adams evaluates key episodes of technical change in the ways that ships were conceived designed built used and disposed of As technological puzzles they have long confounded explanation but when viewed in the context of the societies in which they were created mysteries begin to dissolve Shipbuilding is social practice and as one of the most complex artefacts made changes in their technology provide a lens through which to view the ideologies strategies and agency of social change Adams argues that the harnessing of shipbuilding was one of the ways in which medieval society became modern and while the primary case studies are historical he also demonstrates that the relationships between ships and society have key implications for our understanding of prehistory in which seafaring and communication had similarly profound effects on the tide of human affairs **Entangled** Ian Hodder,2023-08-08 Offers a comprehensive and accessible introduction to the theory of material entanglement and entrapment enriched with vivid examples from everyday life *Entangled* explores how archaeological evidence can help provide a better understanding of the direction of human social and technological change demonstrating how the interrelationship of humans and things is a defining characteristic of human history and culture Using examples drawn from both the early farming settlements of the Middle East and daily life in the modern world Ian Hodder highlights the complex co dependencies of humans and things arguing that the maintenance and sustaining of material worlds are the unseen drivers of human development Updated and expanded *Entangled* offers new perspectives on the study of the relationality between things and humans In this edition the author reframes relationality in terms of various forms of dependence to better explore inequality injustice and the ways people get entrapped in detrimental social and economic

situations An entirely new chapter focuses on human dependence on other humans such as between colonial powers and colonized people Increased focus is placed on object oriented ontologies and assemblages symmetrical archaeology and indigenous and radical approaches in archaeology that critique relationality and posthumanism A wide range of new examples references and literature are presented throughout the book Argues that dependence on things forces humans down particular evolutionary pathways and social trends Demonstrates how long standing entanglements can be irreversible and increase in scale and complexity over time Integrates archaeology natural and biological sciences and the social sciences Presents a critical review of key contemporary perspectives including material culture studies phenomenology evolutionary theory cognitive archaeology human ecology and complexity theory Entangled A New Archaeology of the Relationships between Humans and Things Second Edition is essential reading for undergraduate and graduate students lecturers researchers and scholars in the fields of archeology anthropology material culture studies and related fields across the social sciences and humanities

The Archaeologist's Laboratory Edward B. Banning, 2020-07-27 This second edition of the classic textbook *The Archaeologist's Laboratory* is a substantially revised work that offers updated information on the archaeological work that follows fieldwork such as the processing and analysis of artifacts and other evidence An overarching theme of this edition is the quality and validity of archaeological arguments and the data we use to support them The book introduces many of the laboratory activities that archaeologists carry out and the ways we can present research results including graphs and artifact illustrations Part I introduces general topics concerning measurement error data quality research design typology probability and databases It also includes data presentation basic artifact conservation and laboratory safety Part II offers brief surveys of the analysis of lithics and ground stone pottery metal artifacts bone and shell artifacts animal and plant remains and sediments as well as dating by stratigraphy seriation and chronometric methods It concludes with a chapter on archaeological illustration and publication A new feature of the book is illustration of concepts through case studies from around the world and from the Palaeolithic to historical archaeology The text is appropriate for senior undergraduate students and will also serve as a useful reference for graduate students and professional archaeologists

Relational Archaeologies Christopher Watts, 2014-04-11 Many of us accept as uncontroversial the belief that the world is comprised of detached and disparate products all of which are reducible to certain substances Of those things that are alive we acknowledge that some have agency while others such as humans have more advanced qualities such as consciousness reason and intentionality So deeply seated is this metaphysical belief along with the related distinctions we draw between subject object mind body and nature culture that many of us tacitly assume past groups approached and apprehended the world in a similar fashion Relational Archaeologies questions how such a view of human beings other than human creatures and things affects our reconstruction of past beliefs and practices It proceeds from the position that in many cases past societies understood their place in the world as positional rather than categorical as persons bound up in reticular

arrangements with similar and not so similar forms regardless of their substantive qualities Relational Archaeologies explores this idea by emphasizing how humans animals and things come to exist by virtue of the dynamic and fluid processes of connection and transaction In highlighting various counter Modern notions of what it means to be and how these can be teased apart using archaeological materials contributors provide a range of approaches from primarily theoretical historicized treatments of the topic to practical applications or case studies from the Americas the UK Europe Asia and Australia

Archaeology: The Basics Clive Gamble, 2015-05-15 Now in an updated third edition Archaeology The Basics provides a straightforward and engaging introduction to the world of Archaeology This book answers key questions about how and why we practice archaeology and examines the theories and themes underpinning the subject Fully updated this new edition includes a wide range of examples and new material on key growth areas including Evolutionary approaches in current archaeology The archaeology of landscape and place The impact and value of archaeology Conflict archaeology and the politics of the past With 12 new illustrations four new boxes and additional case studies this text is essential reading for all those beginning to study archaeology and anyone who has ever questioned the past

Archaeologists and the Dead Howard Williams, Melanie Giles, 2016 This volume addresses the relationship between archaeologists and the dead through the many dimensions of their relationships in the field through practical and legal issues in the lab through their analysis and interpretation and in their written visual and exhibitionary practice disseminated to a variety of academic and public audiences Written from a variety of perspectives its authors address the experience effect ethical considerations and cultural politics of working with mortuary archaeology Whilst some papers reflect institutional or organizational approaches others are more personal in their view creating exciting and frank insights into contemporary issues that have hitherto often remained unspoken among the discipline Reframing funerary archaeologists as death workers of a kind the contributors reflect on their own experience to provide both guidance and inspiration to future practitioners arguing strongly that we have a central role to play in engaging the public with themes of mortality and commemoration through the lens of the past Spurred by the recent debates in the UK papers from Scandinavia Austria Italy the US and the mid Atlantic frame these issues within a much wider international context that highlights the importance of cultural and historical context in which this work takes place

Pottery and Social Life in Medieval England Ben Jervis, 2014-07-31 How can pottery studies contribute to the study of medieval archaeology How do pots relate to documents landscapes and identities These are the questions addressed in this book which develops a new approach to the study of pottery in medieval archaeology Utilising an interpretive framework which focuses upon the relationships between people places and things the effect of the production consumption and discard of pottery is considered to see pottery not as reflecting medieval life but as one actor which contributed to the development of multiple experiences and realities in medieval England By focussing on relationships we move away from viewing pottery simply as an object of study in its own right to see it as a central component to developing

understandings of medieval society The case studies presented explore how we might use relational approaches to reconsider our approaches to medieval landscapes overcome the methodological and theoretical divisions between documents and material culture and explore how the use of objects could have multiple implications for the formation and maintenance of identities The use of this approach makes this book not only of interest to pottery specialists but also to any archaeologist seeking to develop new interpretive approaches to medieval archaeology and the archaeological study of material culture

Virtual Systems and Multimedia Theodor G. Wyeld, Sarah Kenderdine, Michael Docherty, 2008-03-03 This book constitutes the thoroughly refereed post conference proceedings of the 13th International Conference on Virtual Systems and Multimedia VSMM 2007 held in Brisbane Australia in September 2007 The 18 revised full papers presented were carefully reviewed and selected from 97 initial submissions during two rounds of reviewing and improvement The papers put a special focus on virtual heritage and virtual cultures virtual environments and virtual experiences as well as on applied technologies and systems

Excavating the Mind Helle Juel Jensen, Mads D. Jessen, Niels Johannsen, 2012-05-07 Excavating the Mind deals with the relationship between the material culture of humans i e our technologies arts and environments and our mental worlds Emphasizing the close interdependence of mind and matter the volume resonates with current developments within sociology psychology and the cognitive sciences yet it aims to supplement the focus on modern predominantly Western societies and individuals with studies of different cultural contexts and processes in the evolutionary and historical past as well as the ethnographic present With contributions from cognitive and social archaeology as well as anthropology semiotics and the history of religion the book combines well illustrated case studies covering a wide chronological and geographic span from Neolithic Europe to the present day South Pacific with incisive discussion of particular theoretical issues in the study of mind and material culture Excavating the Mind is an original contribution to the multidisciplinary debate on the uniquely human entanglement of complex material cultures and mental worlds

Bureaucratic Archaeology Ashish Avikunthak, 2022-02-03 Bureaucratic Archaeology is a multi faceted ethnography of quotidian practices of archaeology bureaucracy and science in postcolonial India concentrating on the workings of Archaeological Survey of India ASI This book uncovers an endemic link between micro practice of archaeology in the trenches of the ASI to the manufacture of archaeological knowledge wielded in the making of political and religious identity and summoned as indelible evidence in the juridical adjudication in the highest courts of India This book is a rare ethnography of the daily practice of a postcolonial bureaucracy from within rather than from the outside It meticulously uncovers the social cultural political and epistemological ecology of ASI archaeologists to show how postcolonial state assembles and produces knowledge This is the first book length monograph on the workings of archaeology in a non western world which meticulously shows how theory of archaeological practice deviates transforms and generates knowledge outside the Euro American epistemological tradition

Contradictions of Archaeological Theory Sandra Wallace, 2012-01-30 Is current archaeological theory stuck at an impasse

Sandra Wallace argues that archaeological theory has become mired as a result of logical and ontological contradictions. By showing that these contradictions are a result of common underlying philosophical assumptions and fallacies, this book is able to show how a fresh approach to this discipline is necessary to resolve them, even if this requires re-examining some of the tenants of orthodox archaeology. This fresh approach is achieved by using Critical Realism as an underlabourer to philosophically evaluate archaeological theory. Starting by assessing the historical impact of philosophy on the discipline and then looking at the current relationship between archaeology and the ontology of the material, this book facilitates the construction of discipline-specific theory by archaeologists. The result is an approach to archaeology that allows both students and practitioners to free themselves from endemic contradictions and re-discover their approach to archaeological theory.

Archaeological Approaches to Cultural Identity S. J. Shennan, 2003-05-20. Examines the critical implications of cultural identity from a variety of perspectives. Questions the nature and limits of archaeological knowledge of the past and the relationship of material culture to cultural identity.
