Archaeological Ceramics:

Archaeological Ceramics Jacqueline S. Olin, Alan D. Franklin, 1982 **The Oxford Handbook of Archaeological Ceramic Analysis** Alice M. W. Hunt, 2016-12-15 The Oxford Handbook of Archaeological Ceramic Analysis draws together topics and methodologies essential for the socio cultural mineralogical and geochemical analysis of archaeological ceramic. Ceramic is one of the most complex and ubiquitous archaeomaterials in the archaeological record; it occurs around the world and through time in almost every culture and context, from building materials and technological installations to utilitarian wares and votive figurines. For more than 100 years, archaeologists have used ceramic analysis to answer complex questions about economy, subsistence, technological innovation, social organization, and dating. The volume is structured around the themes: Research design and data analysis; Foundational concepts; Evaluating ceramic provenance; Investigating ceramic manufacture; Assessing vessel function; and Dating ceramic assemblages. It provides a common vocabulary and offers practical tools and guidelines for ceramic analysis using techniques and methodologies ranging from network analysis and typology to rehydroxylation dating and inductively coupled plasma mass spectrometry. Each chapter provides the theoretical background and practical guidelines, such as cost and destructiveness of analysis, for each technique, as well as detailed case studies illustrating the application and interpretation of analytical data for answering anthropological questions.

Approaches to Archaeological Ceramics Carla M. Sinopoli, 2013-06-29 More than any other category of evidence, ceramics offers archaeologists their most abundant and potentially enlightening source of information on the past. Being made primarily of clay, a relatively inexpensive material that is available in every region, ceramics became essential in virtually every society in the world during the past ten thousand years. The straightforward technology of preparing, forming, and firing clay into hard, durable shapes has meant that societies at various levels of complexity have come to rely on it for a wide variety of tasks. Ceramic vessels quickly became essential for many household and productive tasks. Food preparation, cooking, and storage—the very basis of settled village life—could not exist as we know them without the use of ceramic vessels. Often these vessels broke into pieces, but the virtually indestructible quality of the ceramic material itself meant that these pieces would be preserved for centuries, waiting to be recovered by modern archaeologists. The ability to create ceramic material with diverse physical properties, to form vessels into so many different shapes, and to decorate them in limitless manners led to their use in far more than utilitarian contexts. Some vessels were especially made to be used in trade, manufacturing activities, or rituals, while ceramic material was also used to make other items, such as figurines, models, and architectural ornaments.

Archaeological Ceramics: Interpreting Artefacts Christian Green, 2021-11-16 An inorganic, non-metallic solid made up of either metal or non-metal compounds that has been shaped and then hardened by heating to high temperatures is referred to as a ceramic. Earthenware, porcelain, and brick are some of the common examples of ceramics. In archaeology, ceramic artifacts have an important role in understanding the culture, technology, and behavior of peoples of the past. They are among the most

common artifacts that are found at an archaeological site especially in the form of small fragments of broken pottery called sherds This book brings forth some of the most innovative concepts and elucidates the unexplored aspects of archeological ceramics Its aim is to present researches that have transformed this discipline and aided its advancement This book will serve as a reference to a broad spectrum of readers

Materiality, Techniques and Society in Pottery Production

Daniel Albero Santacreu, 2014-12-02 Daniel Albero Santacreu presents a wide overview of certain aspects of the pottery analysis and summarizes most of the methodological and theoretical information currently applied in archaeology in order to develop wide and deep analysis of ceramic pastes The book provides an adequate framework for understanding the way pottery production is organised and clarifies the meaning and role of the pottery in archaeological and traditional societies The goal of this book is to encourage reflection especially by those researchers who face the analysis of ceramics for the first time by providing a background for the generation of their own research and to formulate their own questions depending on their concerns and interests The three part structure of the book allows readers to move easily from the analysis of the reality and ceramic material culture to the world of the ideas and theories and to develop a dialogue between data and their interpretation Daniel Albero Santacreu is a Lecturer Assistant in the University of the Balearic Islands member of the Research Group Arqueo UIB and the Ceramic Petrology Group He has carried out the analysis of ceramics from several prehistoric societies placed in the Western Mediterranean as well as the study of handmade pottery from contemporary ethnic groups in Northeast Ghana
