Archaeological Constructs:

Archaeological Constructs J. C. Gardin, 2009-06-18 Archaeology like all scientific disciplines is accumulating an ever increasing volume of data which the researcher must be able to retrieve and use in formulating and testing theories of interpretation There are many practical questions of how information can best be recorded stored and disseminated but behind these lie fundamental intellectual questions It is to the latter that Jean Claude Gardin addresses this book The advent of data banks computers micro publishing etc will not in itself improve the access of the researcher to information of real value unless some consensus can be reached on the way the information is selected and presented and the reasoning processes that these different modes of presentation embody Jean Claude Gardin sees this as a long term goal the book as one step on the way to its achievement

Re-constructing Archaeology Michael Shanks, Christopher Tilley, 2016-09-17 In *Re Constructing Archaeology* Shanks and Tilley aim to challenge the disciplinary practices of both traditional and the new archaeology and to present a radical alternative a critically self conscious archaeology aware of itself as practice in the present and equally a social archaeology that appreciates artefacts not merely as objects of analysis but as part of a social world of past and present that is charged with meaning It is a fresh and invigorating contribution to the emergence of a philosophically and politically informed archaeology

Archaeological Situations Gavin Lucas, 2022-09-02 This book is an introduction to theory in archaeology but with a difference Archaeological Situations avoids talking about theory as if it was something you apply but rather as something embedded in archaeological practice from the start Rather than see theory as something worked from the outside in this book explores theory from the inside out which means it focuses on specific archaeological practices rather than specific theories It starts from the kinds of situations that students find themselves in and learn about in other archaeology courses avoiding the gap between practice and theory from the very beginning It shows students the theoretical implications of almost everything they engage in as archaeologists from fieldwork recording writing up and making and assessing an argument to exploring the very nature of archaeology and

justifying its relevance Essentially it adopts a structure which attempts to pre-empt one of the most common complaints of students taking theory courses how is this applicable Aimed primarily at undergraduates this book is the ideal way to engage students with archaeological theory *Archaeology of Communities* Marcello-Andrea Canuto, Jason Yaeger both at, 2012-11-12 Wide range of approaches and settings unlike other books on similar topics International appeal on America centered courses Appeal for courses such as landscape studies and settlement Some contributors with enormous reputations in this collection Joyce Isbell Marcus Preucel *Archaeological Semiotics* Robert W. Preucel, 2010-04-26 This interdisciplinary book examines archaeology's engagement with semiotics from its early structuralist beginnings to its more recent Peircian encounters It represents the first sustained engagement with Peircian semiotics in archaeology as well as the first discussion of how pragmatic anthropology articulates with anthropological archaeology Its central thesis is that archaeology is a distinctive kind of semiotic enterprise one devoted to giving meaning to the past in the present through the study of materiality It compliments standard studies of linguistics and reformulates contemporary theories of material culture Providing an introduction to Saussure and a review of his legacy across structural symbolic and cognitive anthropology Preucel goes on to present the Peircian alternative and highlights its influence on pragmatic anthropology Of special interest are the discussions of the interrelations of structuralism and processual archaeology poststructuralism and postprocessual archaeologies and cognitive science and cognitive archaeology The author offers two original case studies demonstrating how material culture pragmatically mediates social relations one focusing on the aftermath of the Pueblo Revolt from 1680 1694 and the other on the New England utopian community of Brook Farm from 1842 1846 Throughout his analysis Preucel emphasizes the close links between archaeology and other social sciences But he also contends that archaeology by virtue of the powerful ideological character of the past can open up new spaces for discourse and dialogue about meaning and in the process make a valuable contribution to contemporary semiotics *Archaeological Theory in Europe* Ian Hodder, 2014-10-30 The 1980s witnessed exciting developments in theoretical writing in Western archaeology Where previous decades were dominated by the Anglo-American perspective or New Archaeology the recent years showed the European debate grow in confidence and vitality This book published in 1991 captures this spirit of debate as contributors from a wide cross section of countries evaluate the development of the distinctly national and European characteristics of archaeology and assess future directions Contributors consider an extensive range of ideologies and viewpoints stressing the fundamentally historical emphasis and social construction of European archaeology The development of archaeological theory is traced with specific emphasis on factors which differ from country to country Ultimately it argues that the most active response to archaeology is to celebrate theory within a constantly critical mode A great insight into the development of theory *Archaeology and the Information Age* Sebastian Rahtz, Paul Reilly, 2003-09-02 Traditional methods of making archaeological data available are becoming increasingly inadequate Thanks to improved techniques for examining data from multiple viewpoints

archaeologists are now in a position to record different kinds of data and to explore that data more fully than ever before The growing availability of computer networks and other technologies means that communication should become increasingly available to international archaeologists Will this result in the democratisation of archaeological knowledge on a global basis Contributors from Western and Eastern Europe the Far East Africa and the Americas seek to answer this and other questions about the way in which modern technology is revolutionising archaeological knowledge

The Development of Southeastern Archaeology Jay K. Johnson, 1993-02-28 Ten scholars whose specialties range from ethnohistory to remote sensing and lithic analysis to bioarchaeology chronicle changes in the way prehistory in the Southeast

has been studied since the 19th century Each brings to the task the particular perspective of his or her own subdiscipline in this multifaceted overview of the history of archaeology in a region that has had an important but variable role in the overall development of North American archaeology Some of the specialties discussed in this book were traditionally relegated to appendixes or ignored completely in site reports more than 20 years old Today most are integral parts of such reports but this integration has been hard won Other specialties have been and will continue to be of central concern to archaeologists Each chapter details the way changes in method can be related to changes in theory by reviewing major landmarks in the literature As a consequence the reader can compare the development of each subdiscipline As the first book of this kind to deal specifically with the region it be will valuable to archaeologists everywhere The general reader will find the book of interest because the development of southeastern archaeology reflects trends in the development of social science as a whole Contributors include Jay K Johnson David S Brose Jon L Gibson Maria O Smith Patricia K Galloway Elizabeth J Reitz Kristen J Gremillion Ronald L Bishop Veletta Canouts and W Fredrick Limp *Computational and Machine Learning Tools for Archaeological Site Modeling* Maria Elena Castiello,2022-01-24 This book describes a novel machine learning based approach to answer some traditional archaeological problems relating to archaeological site detection and site locational preferences Institutional data collected from six Swiss regions Zurich Aargau Grisons Vaud Geneva and Fribourg have been analyzed with an original conceptual framework based on the Random Forest algorithm It is shown how the algorithm can assist in the modelling process in connection with heterogeneous incomplete archaeological datasets and related cultural heritage information Moreover an in depth review of past and more recent works of quantitative methods for archaeological predictive modelling is provided The book guides the readers to set up their own protocol for i dealing with uncertain data ii predicting archaeological site location iii establishing environmental features importance iv and suggest a model validation procedure It addresses both academics and professionals in archaeology and cultural heritage management and offers a source of inspiration for future research directions in the field of digital humanities and computational archaeology The Archaeology of Events Zackary I. Gilmore,Jason M. O'Donoughue,2015-03-31 These perspectives are applied to a broad range of archeological contexts stretching across the Southeast and spanning more than 7 000 years of the region s pre Columbian history New data suggest that several of this region s most pivotal historical developments such as the founding of Cahokia the transformation of Moundville from urban center to vacated necropolis and the construction of Poverty Point s Mound A were not protracted incremental processes but rather watershed moments that significantly altered the long term trajectories of indigenous Southeastern societies In addition to exceptional occurrences that impacted entire communities or peoples Southeastern archaeologists are increasingly recognizing the historical importance of localized everyday events such as building a house crafting a pot or depositing shell *Archeologia e Calcolatori, supplemento 1, 2007.
