Archaeological Evolution:

An Archaeological Evolution Stanley South, 2006-10-21 Stanley South has been a leading figure not only in historical archaeology but also in anthropological archaeology. His work both past and present has put him in the forefront of monumental changes in American archaeology in the last 40 years. His personal perseverance in field archaeology has also been an inspiration to new and burgeoning archaeologists and anthropologists. *An Archaeological Evolution* is a personal recounting of his life played out among some of the most important debates and movements in archaeology starting in the 1960s up to the 21st century. This seminal volume will be of interest to archaeologists both professional and academic, anthropologists, historians, and conservators in or studying the United States but also wherever archaeology is taught and practiced.

Archaeological Theory Matthew Johnson, 2010-01-19 *Archaeological Theory* 2nd Edition is the most current and comprehensive introduction to the field available. Thoroughly revised and updated, this engaging text offers students an ideal entry point to the major concepts and ongoing debates in archaeological research. New edition of a popular introductory text that explores the increasing diversity of approaches to archaeological theory. Features more extended coverage of traditional or culture historical archaeology. Examines theory across the English speaking world and beyond. Offers greatly expanded coverage of evolutionary theory divided into sociocultural and Darwinist approaches. Includes an expanded glossary, bibliography, and useful suggestions for further readings.

Cognitive Archaeology and Human Evolution Sophie A. de Beaune, Frederick L. Coolidge, Thomas Wynn, 2009-06-22 *Cognitive Archaeology and Human Evolution* presented new directions in the study of cognitive archaeology. Seeking to understand the conditions that led to the development of a variety of cognitive processes during evolution, it uses evidence from empirical studies and offers theoretical speculations about the evolution of modern thinking as well. The twelve essays written by an international team of scholars represent an eclectic array of interests, methods, and theories about evolutionary cognitive archaeology. Collectively, they consider whether the processes in the development of human cognition simply made a better use of anatomical and cerebral structures already in place at the beginning of hominization. They also consider the possibility of an active role of hominoids in their own development and query the impact of hominoid activity in the emergence of new cognitive abilities.

Evolutionary Archaeology Patrice A. Teltser, 1995 What is the role of neo-Darwinian evolution in explaining variation in prehistoric behavior? *Evolutionary Archaeology*, a collection of nine papers from a variety of contributors, is the first book-length treatment of the evolutionists' position. All archaeologists and especially those with a specific interest in method and theory will find much here to challenge traditional theory, solidify the evolutionists' position, and stir further debate. Evolutionary archaeologists argue that Darwinian natural selection acts on human behavior, resulting in the persistence of alternative human behaviors and the material products of those behaviors. The contributors address the methodological requirements of evolutionary theory as it may apply to the nature of archaeological data. Several contributors evaluate the methodological

implications of basic evolutionary principles including the structure of explanations the units of evolution and analysis and the measurement of information transmission Others explore the role of specific analytic approaches such as seriation raw material sourcing and comparative and engineering analyses Still others confront the issue of reformulating archaeological problems from the point of view of evolutionary theory By focusing on the methodological requirements of evolutionary theory these essays go far in meeting the challenge of building new archaeological method The work contributes to a better understanding of cultural evolution and builds toward a new logical framework to explain variation in the archaeological record

Applying Evolutionary Archaeology Michael J. O'Brien, R. Lee Lyman, 2000-03-31 Anthropology and by extension archaeology has had a long standing interest in evolution in one or several of its various guises Pick up any lengthy treatise on humankind written in the last quarter of the nineteenth century and the chances are good that the word evolution will appear somewhere in the text If for some reason the word itself is absent the odds are excellent that at least the concept of change over time will have a central role in the discussion After one of the preeminent and often vilified social scientists of the nineteenth century Herbert Spencer popularized the term in the 1850s evolution became more or less a household word usually being used synonymously with change albeit change over extended periods of time Later through the writings of Edward Burnett Tylor Lewis Henry Morgan and others the notion of evolution as it applies to stages of social and political development assumed a prominent position in anthropological discussions To those with only a passing knowledge of American anthropology it often appears that evolutionism in the early twentieth century went into a decline at the hands of Franz Boas and those of similar outlook often termed particularists However it was not evolutionism that was under attack but rather comparativism an approach that used the ethnographic present as a key to understanding how and why past peoples lived the way they did Boas 1896

Handbook of Evolutionary Research in Archaeology Anna Marie Prentiss, 2019-06-03 Evolutionary Research in Archaeology seeks to provide a comprehensive overview of contemporary evolutionary research in archaeology The book will provide a single source for introduction and overview of basic and advanced evolutionary concepts and research programs in archaeology Content will be organized around four areas of critical research including microevolutionary and macroevolutionary process human ecology studies evolutionary ecology demography and niche construction and evolutionary cognitive archaeology Authors of individual chapters will address theoretical foundations history of research contemporary contributions and debates and implications for the future for their respective topics As appropriate authors present or discuss short empirical case studies to illustrate key arguments

International Handbook of Historical Archaeology Teresita Majewski, David Gaimster, 2009-06-07 In studying the past archaeologists have focused on the material remains of our ancestors Prehistorians generally have only artifacts to study and rely on the diverse material record for their understanding of past societies and their behavior Those involved in studying historically documented cultures not only have extensive material remains but also contemporary texts images and a range of investigative technologies to enable them to build a broader and more reflexive picture of how past societies communities and individuals operated and behaved Increasingly historical archaeology refers not to a particular period place or a method but rather an approach that interrogates the tensions between artifacts and texts irrespective of context In short historical archaeology provides direct evidence for how humans have shaped the world we live in today Historical archaeology is a branch of global archaeology that has grown in the last 40 years from its North

American base into an increasingly global community of archaeologists each studying their area of the world in a historical context Where historical archaeology started as part of the study of the post Columbian societies of the United States and Canada it has now expanded to interface with the post medieval archaeologies of Europe and the diverse post imperial experiences of Africa Latin America and Australasia The 36 essays in the International Handbook of Historical Archaeology have been specially commissioned from the leading researchers in their fields creating a wide ranging digest of the increasingly global field of historical archaeology The volume is divided into two sections the first reviewing the key themes issues and approaches of historical archaeology today and the second containing a series of case studies charting the development and current state of historical archaeological practice around the world This key reference work captures the energy and diversity of this global discipline today

Oxford Handbook of Cultural Evolution Jamshid Tehrani, Rachel L. Kendal, Jeremy Kendal, 2025-07-16 This handbook offers a comprehensive overview of the interdisciplinary field of Cultural Evolution which has in recent years matured into an increasingly diverse and wide reaching but intellectually coherent research programme The book showcases the disciplinary spectrum of research into Cultural Evolution from primatology and medieval literature to gene culture co evolution computer science anthropology archaeology and experimental psychology The handbook consists of review essays contributed by leading experts in their areas structured into ten sections covering key approaches and debates major themes and real world applications Taken together the essays offer an exceptionally broad and forward looking perspective on the field for researchers across the cognitive and evolutionary social sciences including those working in fields adjacent to Cultural Evolution such as Behavioural Ecology Evolutionary Psychology and Digital Humanities The handbook also provides a unique educational resource for students and teachers seeking to integrate Cultural Evolution into undergraduate and postgraduate curricula as well as highlighting some of the potential applications of Cultural Evolution in fields such as education public health and environmental policy

The Oxford Companion to Archaeology Neil Asher Silberman, 2012-11 The second edition of The Oxford Companion to Archaeology is a thoroughly up to date resource with new entries exploring the many advances in the field since the first edition published in 1996 In 700 entries the second edition provides thorough coverage to historical archaeology the development of archaeology as a field of study and the way the discipline works to explain the past In addition to these theoretical entries other entries describe the major excavations discoveries and innovations from the discovery of the cave paintings at Lascaux to the deciphering of Egyptian hieroglyphics and the use of luminescence dating Recent developments in methods and analytical techniques which have revolutionized the ways excavations are performed are also covered as well as new areas within archeology such as cultural tourism and major new sites which have expanded our understanding of prehistory and human developments through time In addition to significant expansion first edition entries have been thoroughly revised and updated to reflect the progress that has been made in the last decade and a half

Evolutionary and Interpretive Archaeologies Andrew

Gardner,2011-06 This collection of original articles compares various key archaeological topics agency violence social groups diffusion from evolutionary and interpretive perspectives These two strands represent the major current theoretical poles in the discipline By comparing and contrasting the insights they provide into major archaeological themes this volume demonstrates the importance of theoretical frameworks in archaeological interpretations Chapter authors discuss relevant Darwinian or interpretive theory with short archaeological and anthropological case studies to illustrate the substantive conclusions produced The book will advance debate and contribute to a better understanding of the goals and research strategies that comprise these distinct research traditions **Evolutionary Archaeology** Michael John O'Brien,1996

Archaeology Kevin Greene,2002 A substantially revised and expanded edition of one of the most widely used and respected general introductions to the field of archaeology *Archaeology in Latin America* Benjamin Alberti,Gustavo G. Politis,2005-08-16 The first overview of current themes in Latin American archaeology written solely by archaeologists native to the region making their collected expertise available to an English speaking audience for the first time Cognitive Models in Palaeolithic Archaeology Thomas Grant Wynn,Frederick Lawrence Coolidge,2017 Cognitive Models in Palaeolithic Archaeology grew out of a specialized thematic session that we organized for the 2013 meeting of the European Society for the Study of Human Evolution Preface **Time, Process and Structured Transformation in Archaeology** James McGlade,Sander E. van der Leeuw,2013-10-16 In a discipline which essentially studies how modern man came to be it is remarkable that there are hardly any conceptual tools to describe change This is due to the history of the western intellectual and scientific tradition which for a long time favoured mechanics over dynamics and the study of stability over that of change Change was primarily deemed due to external events in archaeology mainly climatic or environmental Revolutionary innovations in the natural and life sciences often erroneously referred to as chaos theory suggest that there are ways to overcome this problem A wide range of processes can be described in terms of dynamic systems and modern computing methods enable us to investigate many of their properties This volume presents a cogent argument for the use of such approaches and a discussion of a number of its aspects by a range of scientists from the humanities social and natural sciences and archaeology Archaeology at the Millennium Gary M. Feinman,T. Douglas Price,2007-09-27 In this book internationally distinguished contributors consider hot topics in turn of the millennium archaeology and chart an ambitious agenda for the future **Marxist Perspectives in Archaeology** Matthew Spriggs,1984-02-23 Marxist theory has been an undercurrent in western social science since the late nineteenth century It came into prominence in the social sciences in the 1960s and 1970s and has had a profound effect on history sociology and anthropology This book represents an attempt to gather together Marxist perspectives in archaeology and to examine whether indeed they represent advances in archaeological theory The papers in this volume look forward to the growing use of Marxist theory by archaeologists as well as enriching archaeology as a discipline they have important implications for sociology and anthropology through the

addition of a long term historical perspective This is a book primarily for undergraduates and research students and their teachers in departments of archaeology and anthropology but it should also be of interest to historians sociologists and geographers *Earth Sciences and Archaeology* Paul Goldberg,Vance T. Holliday,C. Reid Ferring,2013-11-11 *Earth Sciences and Archaeology* brings together contributions from an experienced group of archaeologists and geologists whose common objective is to present thorough and current reviews of the diverse ways in which methods from the earth sciences can contribute to archaeological research Many areas of research are addressed here including artifact analysis and sourcing landscape reconstruction and site formation analysis soil micromorphology and geophysical exploration of buried sites Archaeology has benefited from geological methods in many ways in recent decades However in the past ten to twenty years this informal collaboration between geologists and archaeologists has grown into a formal integration of earth science and archaeology on a significant scale This book allows the contributors to assess where we are in terms of interdisciplinary research which approaches work best in specific situations and where this collaborative approach should progress to in the future
