Throughout the Second World War a shift occurred in the composition of the large armored units of armies which lead to an increase in the power of their tanks in particular The Germans were no exception Many of its recently formed Panzer divisions from the 12th SS Panzerdivision Hitlerjugend to the 2nd SS Panzerdivision Das Reich were thrust into the effort to repel the Allies from June to August 1944 in Normandy Within just ten weeks they would be defeated This volume of Casemate Illustrated starts by exploring the initial struggle to gain control of Caen after the Allies had landed on the beaches of Normandy which resulted in the ferocious German Tiger tanks destroying the 7th Armored Division with British losses totaling twenty seven tanks The subsequent strategies the commanders devised for the Panzer tanks during Operations Goodwood and Cobra were not so successful ultimately ending in disaster for the Germans as the Allies broke through the German line by the end of July With over 100 photos diagrams showing the composition of German armored divisions and color profiles of tanks and other armored vehicles this is a detailed examination of the German armored forces in Normandy in 1944 focusing on the organization of the 10 Panzer divisions that took part the vehicles they relied on and the battles they fought in and why ultimately their combined strength was not enough **Armor**, 2011 **Armour's Might: German**

AMPS From the early days of World War II it was clear that the Wehrmacht's antitank units would need to be motorized as existing horse or automobile drawn units were too slow to be effective Initially antitank guns were mounted onto available usually obsolete tank chassis such as the Panzerjäger I and II However German engineers would soon turn to the heavy chassis of the Panzer IV the Panther and the Tiger for their tank hunters It became apparent during the invasion of France that enemy antitank guns were both more powerful and better armored and improvement became a priority during Barbarossa as German units faced off against the new Soviet tanks The appearance of the Soviet T 34 in July 1941 meant that the Germans had to quickly come up with something equally powerful The result was the motorized panzerjäger faster and more mobile than older towed versions This was followed in 1942 by the introduction of the 7.5cm gun Further designs and modifications were informed by reports from the front line Some of these conversions were very successful and resulted in fearsome tank destroyers deployed to great effect by the Wehrmacht The lightweight Hetzer for example was based on a modified Panzer 38 t and entered service in 1944 This small tank became Germany's main tank destroyer during the final stages of the war and would continue in use around the world even after 1945 Though they may not have looked that intimidating the Landser were soon won over and were comforted to have something reliable to stand between them and the Soviet tanks This account illustrated by hundreds of period photos examines the development and deployment of various models of tank destroyers during World War II A very nice reference resource with lots of detail and diorama inspiration for modelers Military Model Scene
