Skaria, 2007 This book on Aromatic Plants contains seven chapters Introductory chapter on History importance and scope of aromatic plants deals with the importance of aromatic crops and their close association with human health and beauty care from time immemorial History of development of cultivation and aroma based industries in different regions of the world is described to emphasize their significance scope and role in increasing the quality of human life Classification of aromatic plants based on their climatic requirement growth habit and floral morphology elaborated in succeeding chapter will be of great interest to students researchers and farmers Chapter on Extraction of aroma principles describes traditional as well as modern techniques employed for efficient extraction of volatile oils and oleo resins from different plants materials and equipments employed for the purpose Quality of oil is found to vary significantly with ecotypes season time of collection crop maturity and weather conditions prevailing during the growth period extraction method and duration of extraction process Conditions and duration of storage also have a bearing on quality of essential oil This necessitates development and imposition of appropriate quality standards in trade These aspects are covered in fourth chapter on Quality assurance of essential oils Aromatic oils their derivatives and combinations occupy a covetable position in holistic medicines such as aromatherapy Chapter on Aromatherapy details the use of essential oils in human health care techniques employed aromatherapy message aromatic bath facial care hair care etc Information on aromatic oil s wide spread application to relieve stress and rejuvenate body are also included Sixth and seventh chapters deal with major and other sources of aromatic oils Under major sources 17 aromatic crops and under other sources 25 crops and discussed in detail These chapters include the common name botanical name and synonyms if any and family vernacular names importance and uses habitat and distribution agro technology soil climate season land preparation planting seed rate and spacing manurial and fertilizer recommendation irrigation weed control pest control harvest propagation techniques herbal yield extraction and utilization oil recovery oil composition properties of oil storage requirements etc **Medicinal and Aromatic Plants** Tariq Aftab, Khalid Rehman Hakeem, 2021-03-27 Before the concept of history began humans undoubtedly acquired life benefits by discovering medicinal and aromatic plants MAPs that were food and medicine Today a variety of available herbs and spices are used and enjoyed throughout the world and continue to promote good health The international market is also quite welcoming for MAPs and essential oils The increasing environment and nature conscious buyers encourage producers to produce high quality essential oils These consumer choices lead to growing preference for organic and herbal based products in the world market As the benefits of medicinal and aromatic plants are recognized these plants will have a special role for humans in the future Until last century the

production of botanicals relies to a large degree on wild collection. However, the increasing commercial collection largely unmonitored trade and habitat loss lead to an incomparably growing pressure on plant populations in the wild. Therefore medicinal and aromatic plants are of high priority for conservation. Given the above, we bring forth a comprehensive volume Medicinal and Aromatic Plants: Healthcare and Industrial Applications highlighting the various healthcare, industrial and pharmaceutical applications that are being used on these immensely important MAPs and its future prospects. This collection of chapters from the different areas dealing with MAPs caters to the need of all those who are working or have interest in the above topic. **Medicinal and Aromatic Plants** Lakhan Kumar, Navneeta Bharadvaja, Ram Singh, Raksha Anand, 2024-06-29

Due to complex phytochemical components and associated beneficial properties, numerous medicinal and aromatic plants in whole or parts have been used for nutritional purposes or the treatment of various diseases and disorders in humans and animals. Essential oils from medicinal and aromatic plants (MAPs) have been exploited for product formulations of pharmaceuticals, cosmetics, food and beverage colorants, biopesticides and several other utility chemicals of industrial importance. There is scientific evidence of many medicinal plant extracts possessing immunomodulatory, immunostimulatory, antidiabetic, anticarcinogenic, antimicrobial and antioxidant properties, thus demonstrating their traditional use in popular medicine. With the advent of modern technology, the exploitation of natural resources has exponentially increased in order to fulfill the demand of an increased human population with improved quality of life. The traditional agriculture and production based supply of commodities is inadequate to meet the current demand. Biotechnological approaches are gaining importance to bridge the gaps in demand and supply. In the proposed book, medicinal and aromatic plant based secondary metabolites have been discussed in terms of their therapeutic potential and industrial relevance. To discuss the qualitative and quantitative analysis of a range of medicinal and aromatic plants based secondary metabolites (SMs), bioprocess development for their extraction and bioseparation, a brief overview of their industrial relevance, various tissue culturing strategies, biotechnological approaches to enhance production, scale up strategies, management of residual biomass post extraction of target SMs is central to the idea of the proposed book. A section will explore the verticals mentioned above. In the next section, the book addresses the approaches for conserving and improving medicinal and aromatic plant genetic resources. In the third section, approaches to managing the post harvest crop residue and secondary metabolites extracted plant biomass will be thoroughly discussed. The recent integration of artificial intelligence to improve medicinal and aromatic plant research at several levels including the development and employment of computational approaches to enhance secondary metabolite production, tissue culture, drug design and discovery and disease treatment will be included in the fourth section. The book summarizes current research status, gaps in knowledge, agro industrial potential, waste or residual plant biomass management, conservation strategies and computational approaches in the area of medicinal and aromatic plants with an aim to translate biotechnological interventions into reality. **Medicinal and Aromatic Plants I** Y.
