## **Art And The Human Blastocyst:**

**ART and the Human Blastocyst** David K. Gardner, Michelle Lane, 2012-12-06 The field of human artificial reproductive technology ART is continually advancing and has witnessed significant changes since the inception of Louise Brown in 1978. Though Louise Brown herself was conceived after the transfer of a blastocyst, there remains significant confusion and debate regarding the stage at which the human embryo conceived in the laboratory should be replaced in the mother. Developments in culture media formulations leading to the introduction of sequential media have brought the role of the blastocyst in human ART back into the spotlight. It was due to this resurgence of interest in the niche of extended culture in human infertility treatment that the symposium on ART and the Human Blastocyst was held. Of this meeting, within this volume, brought to the forefront the main issues raised with the transfer of embryos at the blastocyst stage. It is evident from the chapters that follow that ART needs to be perceived as a continuum of procedures, each one dependent on the preceding one and all equally as important as each other. That is to say, the development of a competent embryo is ultimately dependent on the quality of the gametes from which it was derived. With regard to the oocyte, this then places the emphasis on the physician to use a stimulation protocol that both produces quality oocytes and does not impair endometrial function. Maintenance of gamete and embryo quality is the laboratory's role.

**An Atlas of Human Blastocysts** Lucinda L. Veeck, Nikica Zaninovic, 2003-03-28 If you had a dependable method for determining the healthiest and most viable conceptus from a cohort of growing preembryos, replacing more than a single one in order to achieve good pregnancy rates would be moot. Sometime in the not so distant future, this may be a reality. Taking a step towards that future, *An Atlas of Human Blastocysts* vividly illustrates the process.
