Calude, Jarkko Kari, Ion Petre, Grzegorz Rozenberg, 2011-05-27 This book constitutes the refereed proceedings of the 10th International Conference on Unconventional Computation UC 2011 held in Turku Finland in June 2011 The 17 revised full papers presented together with 6 extended abstracts of invited talks and 3 extended abstracts of tutorials were carefully reviewed and selected from 33 initial submissions The papers are devoted to all aspects of unconventional computation theory as well as experiments and applications Typical topics are natural computing including quantum cellular molecular membrane neural and evolutionary computing as well as chaos and dynamical system based computing and various proposals for computational mechanisms that go beyond the Turing model **Stateless Core: A Scalable Approach for Quality of Service in the Internet** Ion Stoica, 2004-04-19 The fundamental aspect of the Internet architecture that distinguishes it from other network technologies such as X.25 and ATM is that it is connectionless vs

connection oriented and stateless vs stateful The heated debate of whether connection oriented or connectionless architecture is better has lasted for several decades Proponents of the connectionless architecture point out the great robustness and scalability properties of the architecture as demonstrated by the Internet One well known articulation of this philosophy is the End to End Arguments Opponents argue rightfully that there is no known solution that can provide quantitative performance assurances or guaranteed QoS in a connectionless network It has been widely recognized that QoS is a must have feature as the Internet technology evolves to the next stage However all existing solutions that provide guaranteed QoS require routers to maintain per flow another name for connection used by the Internet community state which is the fundamental element of a connection oriented architecture The apparent conflicting goals of having a stateless network and supporting QoS have presented a great dilemma for Internet architects As an example Dave Clark one of the most respected Internet architects and the author of the famous End to End Arguments paper was also a key designer of the Internet Integrated Services Architecture that requires routers to maintain per flow state Dr Ion Stoica's dissertation addresses this most pressing and difficult problem facing the Internet community today how to enhance the Internet to support rich functionalities such as QoS and traffic management while still maintaining the scalability and robustness properties embodied in the original Internet architecture In his dissertation Dr Buffalo Soldiers in Alaska Brian G. Shellum, 2021 Brian G Shellum tells the story of Company L which served in Skagway Alaska and was one of the two companies added to the all Black Twenty Fourth U S Infantry Regiment after war was declared on Spain in April 1898
