

# ALCOHOL AND VIOLENCE

ALCOHOL IS A PSYCHOACTIVE SUBSTANCE THAT AFFECTS VARIOUS PARTS OF THE BRAIN. POTENTIAL EFFECTS OF ALCOHOL INCLUDE AGGRESSIVE IMPULSES AND LOSS OF BEHAVIORAL CONTROL.

THE EFFECTS OF ALCOHOL DEPEND ON VARIOUS FACTORS, INCLUDING:

The amount ingested;

The cultural norms related to the use of violence, including gender norms;

Aspects of the setting in which the alcohol is consumed, such as:

- Strong cultural associations between drinking and violence.
- Expectations that drinking will lead to violence.
- Alcohol being consumed in contexts where violence is more likely to occur.
- Greater tolerance of violence when people have been drinking.

## AGGRESSION AND VIOLENCE

• There is an enormous and unequivocal body of research supporting the relationship between all forms of aggression and alcohol use. This link is most prominently demonstrated in males.

• In 2010, there were 65,880 deaths from self-harm and interpersonal violence attributable to alcohol in the Region of the Americas.

• Experimental studies have found a dose-response connection between blood alcohol concentration (BAC) and aggression, with the effects becoming significant with a BAC of 0.05 g/dL and rising with higher BAC levels.

## HOMICIDE

- Drinking by the perpetrator or by the victim or by both is frequently a factor in homicide.
- In societies where drinking to the point of intoxication is common, studies have found that 48% of both victims and perpetrators had been drinking when the homicide occurred, and that 37% of the offenders and 33–35% of the victims had drunk enough to be intoxicated.

## Sexual Violence

- There are differences in the way men and women experience violence from alcohol. While men experience more harms to the drinker, women are more likely to suffer harms from others' drinking, including: sexual harassment; sexual assault; and family, marital, and intimate partner violence.
- Studies have found a strong causal link between alcohol use and intimate partner violence, particularly affecting the severity of the violence.
- Sexual violence can be associated with alcohol use and higher risk of human immunodeficiency virus (HIV).

## CHILD ABUSE AND NEGLECT

• Strong links have been found between drinking at harmful and hazardous levels and the maltreatment of children.

• Harmful alcohol use by parents and caregivers can impair their sense of responsibility and reduce the amount of time and money available to spend on the child.

## **Alcohol In Human Violence:**

**Alcohol in Human Violence** Kai Pernanen, 1991-07-12 Despite enormous research and media interest in both the effects of alcohol consumption and the causes of violent behavior little theoretically integrated empirical work has been published on the actual relationship between the two Reporting on the most ambitious field study undertaken on naturally occurring anger and aggression the first one to examine the specific contribution of alcohol consumption to different levels of everyday violence this volume bridges a gap in the literature and provides illuminating new insights The empirical data in ALCOHOL IN HUMAN VIOLENCE originate from a multimethod study of experiences of threats and physical violence among the general population of a Canadian city analyses of all incoming reports of violent crime and observations systematically carried out in local bars and taverns The book combines quantitative analyses with qualitative reasoning to examine the processes that connect drinking and violence Confounding conventional wisdom that assumes a straightforward cause and effect relationship the book shows that there are a number of psychological and social variables that are as important as biochemical and neuropharmacological reactions Examining these factors abundant data is presented on the nature of violence from pushing and slapping to the use of a weapon and the extent of injury received when the victims are men women of different ages in different locations and in various relationships Throughout numerous anecdotal illustrations from the study and the news media highlight points of central theoretical concern *Alcohol and Interpersonal Violence* Susan Ehrlich Martin, 1993
