Kennedy,1987 Jamshid Ghyath al Din al Kashi fl 1420 a native of central Iran worked at the Samarcand observatory of Sultan Ulugh Beg grandson of Tamerlane Kashi is best known as a virtuoso of computational mathematics but he was also a competent astronomer Among his major works is the *Zij i Khaqani* an astronomical handbook written in Persian The *zij* contains a list giving the latitudes The Table Analysis of the Table Bibliography Illustrations *Al-Kāshī's Geographical Table* Edward Stewart Kennedy,Jamshīd ibn Mas'ūd Kāshī,M. H. Kennedy,1987 Jamshid Ghyath al Din al Kashi fl 1420 a native of central Iran worked at the Samarcand observatory of Sultan Ulugh Beg grandson of Tamerlane Kashi is best known as a virtuoso of computational mathematics but he was also a competent astronomer Among his major works is the *Zij i Khaqani* an astronomical handbook written in Persian The *zij* contains a list giving the latitudes The Table Analysis of the Table Bibliography Illustrations World-maps for Finding the Direction and Distance to Mecca David King,2021-09-06 Two remarkable Iranian world maps were discovered in 1989 and 1995 Both are made of brass and date from 17th century Iran Mecca is at the centre and a highly sophisticated longitude and latitude grid enables the user to determine the direction and distance to Mecca for anywhere in the world between Andalusia and China Prior to the discovery of these maps it was thought that such cartographic grids were conceived in Europe ca 1910 This richly illustrated book presents an overview of the ways in which Muslims over the centuries have determined the sacred direction towards Mecca qibla and then describes the two world maps in detail The author shows that the geographical data derives from a 15th century Central Asian source and that the mathematics underlying the grid was developed in 9th century Baghdad *Quests of the Dragon and Bird Clan* Paul Kekai Manansala,2006-10-01 Quests of the Dragon and Bird Clan examines how the seafaring trading people known as the Nusantao from Insular Southeast Asia influenced world history This is a blook a book based on a weblog blog The decision to publish the book came after requests to make the information in the blog available in an easier to read and more portable format The advantage of the printed work is that the blog entries are arranged in easy to manage chronological order with out the need for the clicking through the blog archives The glossary entries are also in alphabetical order for easy look up and a word index and table of contents further increase the readiblity of the blog book Important supplementary articles have also been included in the appendices A must read for those who think there is more to history than what we find in mainstream publications *Proceedings, American Philosophical Society* (vol. 132, No. 4, 1988) , Proceedings, American Philosophical Society (vol. 133, No. 1, 1989) , Bibliography of Agriculture with Subject Index ,1988-10 **The Formation of Al-Andalus: Language, religion, culture, and the sciences** Manuela Marín,Julio Samsó,María Isabel Fierro,1998 This volume collects articles addressing the formation of an Andalusi linguistic religious and cultural identity that reflects the complexity of a medieval society on the borders of Islam and Christendom the background against which other developments including the emergence

of a sophisticated Andalusi scientific tradition must be assessed Twenty one essays discuss language and religion intellectual and artistic developments and the exact and natural sciences Annotation copyrighted by Book News Inc Portland OR *On the Contents and Significance of the Khāqānī Zij by Jamshīd Ghīyāth Al-Dīn Al-Kāshī* Edward Stewart Kennedy,1998 *In Synchrony with the Heavens, Volume 2 Instruments of Mass Calculation* David King,2005-06-01 This is the first investigation of one of the main interests of astronomy in Islamic civilization namely timekeeping by the sun and stars and the regulation of the astronomically defined times of Muslim prayer The study is based on over 500 medieval astronomical manuscripts first identified by the author now preserved in libraries all over the world and originally from the entire Islamic world from the Maghrib to Central Asia and the Yemen The materials presented provide new insights into the early development of the prayer ritual in Islam They also call into question the popular notion that religion could not inspire serious scientific activity Only one of the hundreds of astronomical tables discussed here was known in medieval Europe which is one reason why the entire corpus has remained unknown until the present A second volume also to be published by Brill deals with astronomical instruments for timekeeping and other computing devices *Astronomy in the Service of Islam* David A. King,2024-12-11 Based on a wide variety of previously unstudied sources these articles explain how science was applied to three aspects of Islamic ritual in the Middle Ages the regulation of the lunar calendar the organisation of the times of the five daily prayers and the determination of the sacred direction qibla towards the Kaaba in Mecca Simple procedures of folk astronomy were used by the scholars of religious law who determined popular practice more complicated mathematical methods were provided by the scientists and this proved a powerful incentive for the development of scientific analysis and research Some of these procedures were to have far reaching consequences For example the astronomical alignment of the Kaaba known to various medieval writers but long forgotten led to the adoption of similar alignments for the qibla and the final articles show how these were calculated whether from astronomical observation or geographical computation and their impact on the orientation of religious and secular architecture across the Islamic world C est partir d une grande diversit de sources inexplor es que ces articles expliquent comment la science avait t appliqu e a trois aspects du rituel islamique au Moyen Age la r gulation du calendrier lunaire l organisation des heures assign es aux cinq pri res quotidiennes et l tablissement de la direction sacr e qibla vers la Kaaba de la Mecque Des proc d s simples d astronomie populaire taient utilis s par les rudits en droit religieux qui d cidaient de la pratique populaire des m thodes math matiques plus complexes taient offertes par les hommes de science ce qui en effet s av ra tre une motivation puissante dans le d veloppement de l analyse et de la recherche scientifique Certains de ces proc d s eurent des conséquences d une grande port e par la suite L alignement astronomique de la Kaaba pour ne reprendre qu un exemple connu *The Formation of al-Andalus, Part 2* Julio Samsó,Maribel Fierro,2019-10-23 These two volumes present a conspectus of current research on the history and culture of early medieval Spain and Portugal from the time of the Arab conquest in 711 up to the fall of the caliphate They trace the impact of

Islamisation on the pre existing Roman and Visigothic political and social structures the continuing interaction between Christian and Muslim and describe the particular development and characteristics of Muslim Spain al Andalus Together they comprise 38 articles of which 32 have been translated into English specially for this publication The first volume focuses on political and social history and looks in detail at settlement patterns and urbanisation the second examines questions of language and covers the brilliant cultural and intellectual history of the period

King,2022-02-13 This volume of 12 studies mainly published during the past 15 years begins with an overview of the Islamic astronomy covering not only sophisticated mathematical astronomy and instrumentation but also simple folk astronomy and the ways in which astronomy was used in the service of religion It continues with discussions of the importance of Islamic instruments and scientific manuscript illustrations Three studies deal with the regional schools that developed in Islamic astronomy in this case Egypt and the Maghrib Another focuses on a curious astrological table for

calculating the length of life of any individual. The notion of the world centred on the sacred Kaaba in Mecca inspired both astronomers and proponents of folk astronomy to propose methods for finding the qibla or sacred direction towards the Kaaba; their activities are surveyed here. The interaction between the mathematical and folk traditions in astronomy is then illustrated by an 11th century text on the qibla in Transoxania. The last three studies deal with an account of the geodetic measurements sponsored by the Caliph al-Ma'mun in the 9th century; a world map in the tradition of the 11th century polymath al-Biruni; and a corrupted copy of a table of geographical coordinates from 15th century Egypt.
