

6) This problem serves as a “walk-through” on state machine analysis of a sequential circuit. Given the following state association and circuit diagram:

State	Q1	Q0
A	0	0
B	1	0
C	1	1
D	0	1

- From the logic circuit, find the expressions for J_0 , K_0 , J_1 , and K_1 .
- Use the excitation equation for the JK flip flop and the relationships found in part (a) to derive expressions for Q_0^* and Q_1^* . These should be simplified for compatibility with a Mealy machine.
- Write the transition output table (like the vending machine example from lecture on state machines, slide 6)
- Draw the state diagram showing states A, B, C, D and all input/output associated with each state transition.
