Alternative Measures Of The Distribution:

New Methods for Measuring and Analyzing Segregation Mark Fossett, 2017-09-14 This book is open access under a CC BY NC 2.5 license This book introduces new methods for measuring and analyzing residential segregation It begins by placing all popular segregation indices in the difference of group means framework wherein index scores can be obtained as simple differences of group means on individual level residential attainments scored from area racial composition Drawing on the insight that in this framework index scores are additively determined by individual residential attainments the book shows that the level of segregation in a given city can be equated to the effect of group membership e.g. race on individual residential attainments This unifies separate research traditions in the field by joining the analysis of segregation at the aggregate level with the analysis of residential attainments for individuals Next it shows how segregation analysis can be extended by using multivariate attainment models to assess the impact of group membership i.e. the level of segregation for a city while including controls for other relevant individual characteristics e.g. income education language nativity etc It then illustrates how one can use these models to quantitatively assess the extent to which segregation traces to impacts of group membership on residential attainments versus other factors such as group differences in income The book then shows how micro level attainment models can be used to study macro level variation in segregation specifically by estimating multi level models of individual residential attainments to assess how the effect of group membership i.e. segregation index scores vary with city characteristics Finally the book introduces refined versions of popular indices that are free of the vexing problem of upward bias This improves the quality of segregation measurement directly at the level of individual cases and expanding the number of cases that can be safely included in empirical studies

Relative Distribution Methods in the Social

Sciences Mark S. Handcock, Martina Morris, 2006-05-10 This monograph presents methods for full comparative distributional analysis based on the relative distribution This provides a general integrated framework for analysis a graphical component that simplifies exploratory data analysis and display a statistically valid basis for the development of hypothesis driven summary measures and the potential for decomposition enabling the examination of complex hypotheses regarding the origins of distributional changes within and between groups Written for data analysts and those interested in measurement the text can also serve as a textbook for a course on distributional methods

The Distribution of Wealth - Growing Inequality? Michael Schneider, Mike Pottenger, J.E. King, 2016-11-25 This book answers a number of important questions about the distribution of wealth among people and the way that this distribution has changed over time It provides a comprehensive analysis of the personal distribution of wealth from many dimensions economic statistical ethical political sociological and legal Using data from 21 countries this book demonstrates how inequality in the distribution of wealth varies between different parts of the world and how it evolves with particular emphasis on the claim that there has been a long term and continued increase in inequality since the 1970s in most countries It discusses alternative ways of measuring the degree

of inequality analyses Thomas Piketty's claim that society has become more unequal in recent decades and assesses the relative importance of the various determinants of the distribution of wealth The authors explain why the distribution of wealth is unequal and discuss how it could be changed with alternative policies and the possible consequences of these policies for economic efficiency The authors also compare the different distributions of wealth that are implied by alternative views of society This is a valuable resource for students and academics in economics political science and sociology seeking a state of the art account of the theory and evidence surrounding inequality in the distribution of wealth

Classical Methods of Statistics Otto J.W.F. Kardaun, 2005-12-12 Classical Methods of Statistics is a guidebook combining theory and practical methods It is especially conceived for graduate students and scientists who are interested in the applications of statistical methods to plasma physics Thus it provides also concise information on experimental aspects of fusion oriented plasma physics In view of the first three basic chapters it can be fruitfully used by students majoring in probability theory and statistics The first part deals with the mathematical foundation and framework of the subject Some attention is given to the historical background Exercises are added to help readers understand the underlying concepts In the second part two major case studies are presented which exemplify the areas of discriminant analysis and multivariate profile analysis respectively To introduce these case studies an outline is provided of the context of magnetic plasma fusion research In the third part an overview is given of statistical software separate attention is devoted to SAS and S PLUS The final chapter presents several datasets and gives a description of their physical setting Most of these datasets were assembled at the ASDEX Upgrade Tokamak All of them are accompanied by exercises in form of guided minor case studies The book concludes with translations of key concepts into several languages

Statistical Size Distributions in Economics and Actuarial Sciences Christian Kleiber, Samuel Kotz, 2003-10-10 A comprehensive account of economic size distributions around the world and throughout the years In the course of the past 100 years economists and applied statisticians have developed a remarkably diverse variety of income distribution models yet no single resource convincingly accounts for all of these models analyzing their strengths and weaknesses similarities and differences Statistical Size Distributions in Economics and Actuarial Sciences is the first collection to systematically investigate a wide variety of parametric models that deal with income wealth and related notions Christian Kleiber and Samuel Kotz survey compliment compare and unify all of the disparate models of income distribution highlighting at times a lack of coordination between them that can result in unnecessary duplication Considering models from eight languages and all continents the authors discuss the social and economic implications of each as well as distributions of size of loss in actuarial applications Specific models covered include Pareto distributions Lognormal distributions Gamma type size distributions Beta type size distributions Miscellaneous size distributions Three appendices provide brief biographies of some of the leading players along with the basic properties of each of the distributions Actuaries economists market researchers social scientists and physicists interested in econophysics will find
