

Aluminized Steel

At Zeeco Metals, Inc., we have the expertise and experience to handle supplying customers with slit steel coils. Our machining procedures involve slitting steel coils to the specified width, gauge, and hardness needed for your applications. We can work on a wide array of flat-rolled carbon steels, including hot-rolled pickled and oiled, cold-rolled, galvanized, aluminized, and more!

Aluminized steel retains the strength of the original steel with the added benefits found from an aluminum coating such as improved surface qualities, greater corrosion, and high-temperature resistance. An aluminized steel coil is the product of hot-dipping a coil in either an aluminum-silicon alloy or pure aluminum. This process is called hot-dip aluminizing, which gives the material better surface properties comparable to the more expensive stainless steel.

ADVANTAGES OF ALUMINIZED STEEL

Compatibility With Other Metals

Lower Cost

Excellent Heat Reflectivity

Corrosion Protection

Resistance to High Temperatures

APPLICATIONS OF ALUMINIZED STEEL

Hvac Components and Units

Automotive Parts

Industrial Pipes

Kitchen Applications

INDUSTRIAL KILNS AND DRYING OVENS

Aluminized steel can withstand high temperatures, which makes it the ideal material for industrial kilns and drying ovens. In addition, the ovens' components and internal parts, such as motors and heating elements, are mostly made from aluminized steel.

ALUMINIZED STEEL COIL SLITTING

Aluminized steel coil slitting involves feeding steel coils through a slitter head with high-precision sharp blades to cut the steel to a specified width. An extensive amount of force is applied to the steel. Some aluminum grades slit efficiently; others are more challenging to slit.

The aluminized steel is placed under a set of rotary knives for the slitting process. These sharp edges are set to cut based on the desired project specifications.

Our team of metal experts at Zeeco Metals, Inc. performs extensive quality assurance of the slit materials to get proper clearance ensuring the highest quality slit edges and adherence to width tolerances. Our slitting capabilities allow us to process aluminized steel or other carbon-based steels to suit various applications required on any project.

Coatings for Harsh Environments Shiladitya Paul,2020-11-13 The operation of

numerous components that are critical to safety in industries around the world relies on protective coatings. These coatings often allow process equipment to serve a purpose in environments well beyond the operational limit of the uncoated components. Durability, ease of application, repairability, reliability, and long term performance of such coatings are all key to their application. Therefore, this book *Coatings for Harsh Environments* is devoted to research and review articles on the metallic, non-metallic, and composite coatings used in aggressive environments. In particular, the topics of interest include but are not limited to coatings for high temperature and molten salt applications, thermal spray and cold spray coatings for aggressive environments, corrosion wear and cavitation resistant coatings, coatings for mitigating marine corrosion, coatings for chemical and petrochemical plants, thermal barrier coatings.
