Biocomposites in Automotive Applications Srikanth Pilla, Charles Lu, 2015-01-01 The automotive sector has taken a keen interest in lightweighting as new required performance standards for fuel economy come into place This strategy includes parts consolidation design optimization and material substitution with sustainable polymers playing a major role in reducing a vehicle s weight Sustainable polymers are largely biodegradable biocompatible and sourced from renewable plant and agricultural stocks A facile way to enhance their properties so they can indeed replace the ones made from fossil fuels is by reinforcing them with fibers to make composites Natural fibers are gaining more acceptance in the industry due to their

renewable nature low cost low density low energy consumption high specific strength and stiffness CO2 sequestration potential biodegradability and less wear imposed on machinery Biocomposites then become a very feasible way to help address the fuel consumption challenge ahead of us This book entitled Biocomposites in Automotive Applications is segmented into three sections and includes eleven hand picked technical papers covering Processing and characterization of biocomposites Automotive applications of biocomposites A perspective on automotive sustainability It is a must read for those interested in the growing importance of composites used in automotive applications and their impact on sustainable mobility
