Broto, 2017-07-06 Energy has become a central concern of many strands of geographical inquiry from global climate change to the effects of energy decisions on our lives. However, many aspects of the black box of relationships at the energy society interface remain unopened, especially in terms of the spatial underpinnings of energy production and consumption within nations, cities and regions. Debates focusing on the location and nature of energy flows frequently fail to consider the multiple geographical networks that illustrate and explain the distribution of fuels and services around the world. Providing an integrated perspective on the complex interdependencies between energy and geography, *The Routledge Research Companion to Energy Geographies* offers a timely conceptual framework to study the multiple facets of energy geography, including security, space and place, planning, environmental science, economics and political science. Illustrating how a geographic approach towards energy can aid decision-making pathways in the domains of social justice and environment, this book provides insights that will help move the international community toward greater cooperation, stability and sustainability.

*Handbook on the Geographies of Energy* Barry D. Solomon, Kirby E. Calvert, 2017-12-29 This extensive Handbook captures a range of expertise and perspectives on the changing geographies and landscapes of energy production, distribution and use. Combining established and emerging scholarship from across disciplines, the expert contributions provide a broad overview of research frontiers for the changing geographies of energy worldwide. Interdisciplinary in nature and broad in scope, it serves to answer a range of questions and provide the reader with conceptual and methodological foundations.

*The New Geographies of Energy* Karl Zimmerer, 2013-09-13 *The New Geographies of Energy: Assessment and Analysis of Critical Landscapes* is a pioneering collection of new geographic scholarship. It examines such vitally important research topics as energy dilemmas of the United States, large trends and patterns of energy consumption, including China's role, peak oil, energy poverty and ethanol, and other renewable energy sourcing. The book offers advances in key emerging areas of energy research, each distinguished in the following sections: i) geographic approaches to energy modeling and assessment; ii) fossil fuel landscapes; iii) the landscapes of renewable energy; iv) landscapes of energy consumption; and v) an overview of the new geographies of energy. Karl Zimmerer, *Annals of the Association of American Geographers* issue editor and an essay on America's oil dependency. Vaclav Smil, renowned energy geographer. In addition, there is a specially commissioned book review. This book was published as a special issue of the *Annals of the Association of American Geographers*.
